REMEMBER:

MORE THAN JUST ANOTHER PRETTY FACE.

Says wha? Says ANSI.

Specifically, subcommittee X3B8 of the American National Standards Institute (ANSI) says so. The fact is all Elephant™ flappies meet or exceed the specs required to meet or exceed all their standards.

But just who is "subcommittee X3B8" to issue such pronouncements?

They're a group of people representing a large, well-balanced cross section of disciplines—from academia, government agencies, and the computer industry. People from places like IBM, Hewlett-Packard, 3M, Lawrence Livermore Labs, The U.S. Department of Defense, Honeywell and The Association of Computer Programmers and Analysts. In short, it's a bunch of high-caliber nitpickers whose mission, it seems, in order to make better disks for consumers, is also to

make life miserable for everyone in the disk-making business.

How? By gathering together periodically (often, one suspects, under the full moon) to concoct more and more rules to increase the quality of flexible disks. Their most recent rule book runs over 20 single-spaced pages—listing, and insisting upon—hundreds upon hundreds of standards a disk must meet in order to be blessed by ANSI. (And thereby be taken seriously by people who take disks seriously.)

In fact, if you'd like a copy of this formidable document, for free, just let us know and we'll send you one. Because once you know what it takes to make an Elephant for ANSI...

We think you'll want us to make some Elephants for you.

ELEPHANT.™ HEAVY DUTY DISKS.

For a free poster-size portrait of our powerful pachyderm, please write us.

CIRCLE 281 ON READER SERVICE CARD

THE LEADING EDGE IN PRINTERS

ONE GREAT LINE. ONE GREAT WARRANTY.

Finally, there's one full family of printers that covers every business or word processing application—all from C. Itoh, a company known for packing more product into less price, and all distributed exclusively by Leading Edge, a company known for searching out and providing that very thing. Which means that one call to one source can get you any printer, any time you need it, for any purpose. All backed by a full years' warranty from Leading Edge. (Try that on any other line of printers.)

THE PRO'S.

The Prowriters: business printers—and more. The "more" is a dot-matrix process with more dots. It gives you denser, correspondence quality copy (as opposed to business quality copy, which looks like a bad job of spray-painting).

Prowriter: 120 cps, 80 columns dot matrix compressable to 136, 10" carriage. Parallel or serial interface.

Prowriter 2: Same as Prowriter, except 15" carriage allows full 136 columns in normal print mode. Parallel or serial interface.

THE STAR.

The Starwriter F-10. In short for more precisely, in a sleek 6" high, 30-pound unit, it gives you more of just about everything—except bulk and noise—than any other printer in its price range. It's a 40 cps letter-quality daisy-wheel with a bunch of built-in functions to simplify and speed up word processing. It plugs into almost any micro on the market, serial or parallel.

THE MASTER.

The Printmaster F-10. Does all the same good stuff as the Starwriter except, at 55 cps, the Master does it faster.

Distributed Exclusively by Leading Edge Products, Inc., 225 Turnpike Street, Canton, Massachusetts 02021.
Call: toll-free 1-800-343-6833 or in Massachusetts call collect (617) 828-8150. Telex 951-624.

CIRCLE 280 ON READER SERVICE CARD

A BETTER SYSTEMCARD FOR THE IBM PC. FROM THE PEOPLE WHO WROTE ITS OPERATING SYSTEM.

When you choose a multi-function card for your IBM PC, choose the best.

No other company understands your IBM PC like Microsoft®. We developed its operating system, MS-DOS. That's why the SystemCard has features no other add-in card can match.

The SystemCard advantage.

The Microsoft SystemCard takes up only one slot, but gives you everything you need to complete your IBM PC or PC XT system.

Its features include 64K or 256K of extra RAM memory plus Microsoft's RAMDrive™ disc emulation software which allows you to use RAM as you'd use disk. But 50X faster.

It includes a parallel interface and a print spooler that lets you continue computing even while printing your biggest files.

The SystemCard also includes both an IBM compatible RS232 serial interface and a parallel interface. Plus terminal emulation software that lets you connect your PC to other computers. The SystemCard even includes a calendar/clock and time utilities for your time-based applications.

And it's fully compatible with DOS 1.1 or DOS 2.0.

The right choice.

One card—the SystemCard—does more than a host of slot-munching peripherals. And since Microsoft understands your PC so well, we've avoided many of the problems you might find in other cards. You can run RAMDrive and the print spooler at the same time, as a true multi-function add-on. Run the clock utilities without a resident language interpreter, because our drivers are written in the PC's own assembly language. This saves memory.

What's more, you can queue up to ten files of any length by name on a command line, like a true system spooler—and interrupt them any time to make additions, deletions or changes, right from the keyboard.

You'll also run DOS 2.0 with the SystemCard's own installable drivers. And run the serial interface through IBM PC PORT 1 or PORT 2 with no translation codes necessary and with full interrupt support.

A great value.

Ask your dealer for a demonstration of the Microsoft SystemCard for your IBM PC. Consider all the things one card can do for you. Then think who made it. The SystemCard. From Microsoft.

DYB3-B99-6B13

THE NEW EXECUTIVE PACKAGE™ FROM ALPHA.

FORTY BUSINESS PROGRAMS YOU'LL USE EVERY DAY. STARTING TODAY.

All of a sudden, there are forty new ways to help run your business with an IBM PC.

Ways to help you plan, budget, schedule and forecast with the skill and insight of a b-school grad. But without attending business school, and without learning complicated programming.

It's called the Executive Package from Alpha. And it puts together forty powerful business analysis and projection formulas into ready to use programs for all types of executives, in every kind of business.

Use CASHPLAN for tighter cashflow management.

Call up INFLATE to help calculate profits in a changing market.

Optimize production scheduling and project planning with any of three CRITICAL PATH METHOD formulas.

Analyze your competition with GROWTH.

There's even BETA for objective weighing of stock investment risks.

SIMPLIFIES VISICALC®, 1-2-3™ AND MULTIPLAN™

Plus, the programs are designed to work together with VisiCalc®, 1-2-3™, Multiplan™ and BASIC. So now you'll have more of the tremendous power of these popular programs at your fingertips, ready to go.

To help keep things simple, each program in the Executive Package is presented with a real-world example of how another company used it and the results they got. You simply plug in your numbers and out come your company's solutions.

And like all software from Alpha, the Executive Package comes with a concise instructional audio tape to introduce you to the programs and get you started solving business problems right away. Nothing else is this easy. And with a suggested retail price of just \$145 complete, nothing else you buy for your computer will pay back as fast.

Start doing the kind of critical everyday business calculations you'd be doing right now, if only you could. Because now you can.

See the remarkable new Executive Package from Alpha at leading computer and software stores. Or call us at 1-800-451-1018 (in Massachusetts call 1-617-229-2924 collect) for the name of the Alpha dealer nearest you.

Dear Mr. Smith:
Your interest fee is \$48.92.
Please remit this amount immediate.
Your timeliness will be much appreciated.

Finally, go to Wordstar
and Automatically Mailmerge
a Customized message

Introducing Data Base Manager II – a powerful, yet easy to use software product. It interfaces effortlessly with VisiCalc and Wordstar in just a few keystrokes. Howard Herbin, Computerland of Niles, Illinois says: "Alpha's Data Base Manager II is the first I have seen which is 100% VisiCalc and Wordstar compatible – it is truly useful."

Data Base Manager II features: date functions, multi-level searching, phonetic search, easy record reconfiguration, powerful report writer, hard disk compatibility, multi-level memory and disk based sorting for large files and more.

Data Base Manager II is compatible with all spreadsheets which support DIF files, such as 123[™], and with most word processors. To top it off, files that you download from your mini or main frame can be easily read by Data Base Manager II through its unique data exchange (DEX) format. All Alpha Software products come with spoken instructions. Product and Demo available at COMPUTERLAND and other fine dealers. Call 1-800-451-1018, for your nearest dealer. Remember – only Alpha Software offers you toll free phone support.

Teach yourself software in minutes. Not hours.

Insert an ATI training disk, and presto! Three minutes later, you're practicing usable skills. Within an hour, you're proficient.

Even if you've never touched a computer before.

ATI's self-promoting disk simulates the actual software on the screen of your personal computer. If you have a question later, the helpful handbook is set up to give you the answer in 15 seconds.

ATI Training Power is faster because it's Performance Based. Instead of taking time teaching you how a program works, ATI shows you how to put it to work. Right away.

ATI's unique Performance-Based Training is widely used by many Fortune 500 companies, such as IBM, DEC, Xerox, NEC, and Toshiba. Not to mention thousands of small businesses.

ATI's training programs operate in virtually every business oriented microcomputer.

Match ATI's selections with your software library, and order today.

Word Processing

ATI's Word Processing Series teaches you how to create, edit, move, and print text with popular programs. fast! A must for executives and secretaries alike.

Financial Planning

What if you could learn to do a complete "what if" spreadsheet analysis in less than an hour? ATI's Financial Planning Series teaches you this and more. Turn software packages into powerful management tools, quickly.

Database Management

To get the most out of your data base, learn to use these programs fast, with ATI's Database Management Series.

Operating Systems

Learn to prepare, monitor, maintain, and trouble shoot your own system like a pro, with ATI's Operating Systems Series.

Accounting

Now it's easy to put your accounting on computer, with an outstanding software package and ATI Training Power to get you (and your bookkeeper) up to speed, rapidly and cost-effectively.

Programming

ATI's Basic Programming Series teaches you how to write, enter, debug, and use programs that analyse business expenses, organize mailing lists, and more.

RealWorldTM Business Software, Ten Generations of Refinement

It Takes Experience to Succeed in the Real World. We Have It.

Refined from the feedback of over 25,000 end users since 1975, MBSI's RealWorldTM packages have evolved through eight generations on mini-computers, and two generations on micros.

This integrated set of accounting packages embodies the creative efforts of nearly thirty man-years of research and development.

Conforming to generally accepted accounting standards, RealWorldTM has been selected for private label use by leading manufacturers such as TeleVideo[®] and Digital Equipment Corp.

Behind these packages you'll find over 250,000 lines of clean and consistently structured COBOL

source code, and nearly 2,000 pages of readable user and technical documentation.

RealWorldTM applications are compatible with nearly all micro operating systems (including CP/M[®] and UNIX[®]), and run on almost every popular small business computer.

In a world of often disappointing workmanship and sad business ethics, RealWorldTM Software offers a refreshing choice for computer manufacturers, distributors, dealers and consultants who want a quality software solution.

Sellable, installable, supportable, user friendly and profitable — RealWorldTM Software.

COVER

Photography by Dennis Bettencourt

You're looking at the only word processor that's as easy to use as SuperWriter.™

If you're like most people,
you don't want to make a career out of
word processing. When you have to write a simple
letter or memo, all you have to do is roll up your sleeves
and get down to business.

And if you're buying a personal computer,
now there's a new software package that
makes things just that simple.

SuperWriter.™

Write your first
letter in 10 minutes flat.

With some word processing
software, you have to learn
dozens of different commands.
But with SuperWriter, you only have
to remember three keys. And we
give you a self-paced starter guide
that shows you exactly what
to do, step by step.

So it doesn't matter if
you've never used a computer
before. Or if you're only a
hunt-and-peck typist. With the
SuperWriter word processing program,
you can write a perfect business
letter the very first time.

It's that simple.

Everything you need for only **\$295⁰⁰**—even a spelling checker.

We're talking about a really complete package here. You get a full-function word processor, our 20,000-word SuperSpellGuard™ spelling checker, and a form letter generator. All for \$295.00 suggested retail. To get all these functions any other way, you might have to spend \$900.00 or more.

You never knew your letters could look so good.

We've built all kinds of professional features into SuperWriter. Like proportional spacing. Boldface highlighting. Memo formatting. And more. So even if you're a complete beginner, you'll wind up with completely professional results.

Help is closer than you think.

SORCIM®

If you get stuck on a problem with any other word processing software, you'll probably have to go back to the store for help.

But if you have any questions at all about SuperWriter, all you do is pick up the phone. We've got a full-time crew of customer service experts on call, ready to help you out.

Works on lots of personal computers.

About the only thing it can't do is doodle.

Right now, SuperWriter is available for the IBM PC and the new IBM PC XT. Of course, it takes full advantage of their features—full color, hard disk and more.

By June 15, we'll have SuperWriter ready for CP/M, CP/M-86 and MS/DOS operating systems, which means you can use it on most of the popular personal computers.

So stop by your nearest computer or software store soon and ask about SuperWriter. In just 10 minutes, you can learn everything you ever need to know about word processing. And see why every other system is too complicated for words.

SuperWriter™

CRITICS CHOICE!

Financier Personal Series, the financial software everyone's talking about.

Before you invest in financial software, here's what professional software reviewers coast to coast are saying about the Financier Personal Series—the software with performance that picks up where the others leave off!

“It is clear that the Financier Personal Series is the most sophisticated and flexible of the financial programs under review here.”

Burton Alperson, Ph.D. Reviewer
SOLFTALK for the IBM

Within an hour of opening the software package, I was able to understand and appreciate the power of this financial package. Financier is one of those packages which many people will probably use, along with their wordprocessing and spreadsheet programs, quite frequently, if not daily.”

Eric R. Bedell Reviewer
PC REPORT—IBM users group of
the Boston Computer Society

“Out of all these programs,* the Financier Personal Series provides the best balance of extensive capabilities and ease of use. The manual is outstanding as an introduction to both the practice of bookkeeping and the use of a personal computer to perform this task.”

Steven Yoder and Sherry Knight, CPA
PC MAGAZINE

“The Financier Personal Series is a financial record-keeping program. It is menu driven, and exceptionally well-documented. Written in BASIC, one gets a lot more from this system than from other so-called home accounting programs. Truly an outstanding package, I use it for my own financial records.”

Thomas V. Bonoma, IBM Columnist
MICROCOMPUTING

See for yourself why Financier's Personal Series has everybody talking. Get a demonstration today!

CAMEO

HARD DISK SYSTEMS ARE THE SOLUTION TO:

- **Reliable Back-Up Requirements**
- **Large Data Storage Needs**

CAMEO large capacity high performance hard disk systems are the ideal mass storage system for use in those business environments where a company's data bank itself is understood to be one of the most valuable parts of the whole micro-computerized office system. The data bank was costly to acquire and could be more costly to replace. Regular access to it is needed every day without fail.

CAMEO'S subsystem 1050, consists of 40 formatted megabytes of on-line winchester data storage and 10 formatted megabytes of removable winchester cartridge back-up capability. In the unlikely event of a problem with the fixed winchester drive the removable cartridge drive can perform as a fully operable full function high performance on line random access winchester hard disk system. It provides highly reliable (full CRC error checking on full spec winchester media) permanent, off-line data storage capability for permanent data archiving.

CAMEO'S configuration options allow multiple computers to access all areas of the disk as well as virtual RAM disk configuration from add-on memory boards. Higher capacity systems and nationwide third party maintenance are available. Immediate availability through CAMEO'S regional distributor network.

SPINNAKER'S LINE OF EARLY LEARNING GAMES IS GROWING AS FAST AS YOUR CHILD'S MIND.

Watching your kids grow up is a lot of fun. But making sure their minds grow as fast as their bodies is even more rewarding. That's where we can help. With a growing line of Early Learning Programs that are not only lots of fun to play, but also educational.

Some of the games you see on these two pages help exercise your child's creativity. Others help improve vocabulary and spelling skills. While others

improve your child's writing and reading abilities. And all of them help your child understand how to use the computer.

So if you're looking for computer programs that do more than just "babysit" for your kids, read on. You'll find that our Early Learning Programs are not only compatible with Apple®, Atari®, IBM® and Commodore 64™ computers, but also with kids who like to have fun.

HEY DIDDLE DIDDLE™ Poetry in motion. Ages 3 to 10.

Kids love rhymes. And since **HEY DIDDLE DIDDLE** features 30 classic rhymes with full color graphics and the neatest computer music you've ever heard, it makes rhyme games more fun than ever before.

Plus, it makes it fun for kids to read, helps them understand how words and rhymes create poetry and lets them take fragmented thoughts and rearrange them to form coherent verse.

RHYMES & RIDDLES™ come to life. Ages 5 to 9.

RHYMES & RIDDLES will delight your children. Because when they successfully complete the rhymes, riddles, and famous sayings on the screen, they'll see them come to life—with music

and colorful pictures. And RHYMES & RIDDLES not only teaches children the correct lyrics to nursery rhymes and famous sayings. It also helps kids learn to read and spell while they're having fun! That's why parents like RHYMES & RIDDLES, too!

KINDERCOMP™ Numbers, shapes, letters, words and drawings make fun. Ages 3 to 8.

KINDERCOMP is a game that allows very young children to start learning on the computer. It's a collection of learning exercises that ask your children to match shapes and letters, write their names, draw pictures, or fill in missing numbers. And KINDERCOMP will delight kids with color-

ful rewards, as the screen comes to life when correct answers are given.

As a parent, you can enjoy the fact that your children are having fun while improving their reading readiness and counting skills.

FACEMAKER™ makes faces fun. Ages 4 to 12.

FACEMAKER lets children create their own funny faces on the screen. Once a face is completed, your children will giggle with delight as they make it do all kinds of neat things: wink, smile, wiggle its ears, or whatever their imagination desires.

Plus, FACEMAKER helps children become comfortable with computer fundamentals such as: menus, cursors, the return key, the space bar, simple programs, and graphics. FACEMAKER won't make parents frown because their children will have fun making friends with the computer.

SPINNAKER™
We make learning fun.

Incredible Trainers!

No matter what level IBM Personal Computer training you want, our interactive tutorial software gives you the answers. Easier, faster, smarter.

Take **The INSTRUCTOR**, for first-time users. PC Magazine called it, "**The best . . . introduction to the PC around.**" It's #1 because it takes the work out of learning initial PC operations.

And Now! Brand New! Setting a new standard for interactive training, we give you . . .

PROFESSOR DOS.

You've got to see (and hear) it to believe it! Designed for PC users ready to learn higher level PC concepts, including DOS commands.

Professor DOS will challenge you, amuse you, and amaze you.

Both programs use vivid graphic images, creative animation, sound and living color to take you from mystery to mastery of your IBM PC. Each is totally self-paced. And they're "people-literate." So you really do learn.

The most sought-after computer-

assisted training anywhere. Available at IBM PC dealers and software retailers everywhere, separately or in a tutorial set. Affordable at a suggested list price of **ONLY . . .**

\$44.95 — The INSTRUCTOR

\$59.95 — Professor DOS

or

\$94.95 — Tutorial Set

We've made **The INSTRUCTOR** and **Professor DOS** so realistic, you'll agree . . . **THEY'RE INCREDIBLE!**

Requires MS-DOS, any IBM Personal Computer or Compaq Personal Computer with at least one diskette drive and a monochrome or color display. Phone and dealer inquiries welcome.

With Chart-Master,TM creating quality graphics is as easy as apple pie.

No matter how you slice them, pie charts, bar charts and scatter diagrams are a lot easier to read and understand than rows and columns of numbers.

Now you can create colorful business graphics anytime you need them, with an easy-to-use Chart-Master graphics software program. A program that works with Hewlett-Packard, Panasonic and other plotters and your IBM® personal computer.

Values printed at data points; both left and right Y-axis scales; floating legends & bars; both horizontal & vertical formats; exploded pie sections.

Just enter your data, choose a chart format, preview the chart on your screen, and Chart-Master will automatically create a beautiful, presentation-quality chart. In seconds.

There's more to Chart-Master than simplicity. Incredible power and sophistication. You can enter

data manually or automatically from Visicalc® and other programs. Print on either paper or acetate transparencies. Make your charts any size, anywhere on the page.

Have your text appear in attractive print-quality type. Choose from sophisticated formats that include percentage bars, stock price (High/Low/Close) and area charts.

Power and ease-of-use. That's why Chart-Master is in daily use at major corporations like GE, Eastman Kodak, Exxon, Union Carbide, GM, AT&T, DuPont, 3M, Citibank, Motorola, Procter & Gamble and GTE.

The retail price of Chart-Master is \$375. For a complete information kit and name of your nearest dealer, contact Decision Resources, Inc., 21 Bridge Square, Westport, CT 06880. (203) 222-1974.

QUADRAM INAUGURATES THE

Use Apple software in your IBM PC and XT

Who said you can't mix Apples and IBMs? Innovation by Quadram makes it possible with Quadlink.™ A simulated Apple computer on a revolutionary new enhancement board.

Most programs designed for the Apple II, II Plus or IIe — including educational software and entertainment options — are now compatible with IBM PCs sophisticated business capabilities.

That's right. An Apple and an IBM. In one computer with no software limitations. Quadlink by Quadram opens a whole new world of possibilities.

Easy to use

Quadlink plugs inside IBM PCs. No conversion or reformatting of diskettes needed. Just load Apple software in the IBM and key one command. That puts you in the Apple mode. When ready to switch back, just press a different

key. It's that simple. Like having an Apple 64K computer inside your IBM.

Keep the extras

Quadlink allows use of all IBM enhancements while running Apple software. Printers, buffers, monitors and more.

When using a monitor there's no plugging or unplugging cables. Apple programs will appear on an

Apple and the Apple logo are registered trademarks of Apple Computer, Inc.

IBM and the IBM logo are registered trademarks of International Business Machines Corporation.

MERGER OF APPLE AND IBM

IBM monochrome or color monitor, like Quadram's chrome vivid RGB color monitor Quadchrome, more clearly than Apple's own screen — even while working with Apple's high resolution color graphics.

Explore your options
Quadlink comes standard with 64K memory. Requiring only one expansion slot, it offers a game

port and works with all I/O devices designed to enhance the IBM PC. Like parallel and serial ports for operating printers, modems and other peripheral accessories. There's nothing like Quadlink. And nothing like reliable Quadram Quality to stand behind it.

Quadram Corporation is an Intelligent Systems Company. For over a decade, ISC has been an innova-

tor in personal computer enhancements and color graphics peripherals.

Quadram products are available only through authorized dealers worldwide. Visit one and ask for a demonstration of Quadlink. Priced at only \$680, we think you'll like what we've discovered.

Check on our other enhancements too, especially Quadboard, the original multifunction board for the IBM PC.

4357 Park Drive / Norcross, Ga. 30093 / (404) 923-6666

Available for delivery to retail stores worldwide in late June.

CIRCLE 382 ON READER SERVICE CARD

How you can tell

They're both IBM Personal Computers. And they're the same. Only different.

The system that's on the left is the ideal solution for a person who wants to be creative, efficient and improve his or her personal productivity.

So is the other one.

The system on the left incorporates the quality, the reliability and the technological excellence that have made IBM a computer leader for over 30 years.

So does the other one.

So which is which? Simple.

On the left is the IBM Personal Computer, starting with 64KB of user memory (expandable to 640KB) and two optional 5¼" diskette drives.

It can easily satisfy your computing needs at the office, at home or in school.

With 5 expansion slots,

it gives you room to grow.

(You can even make it function like the computer shown on the right by adding an expansion unit that houses one or two 10-million-character fixed disk drives.)

This system can run most of the same software and accept most of the same IBM hardware as the computer on the right. And its price/performance is nothing less than remarkable.

The IBM Personal Computer

which is which.

On the right is the IBM Personal Computer XT, starting with 128KB of user memory (expandable to 640KB), a 5¼" 360KB diskette drive *plus* a standard 10-million-character fixed disk drive that's *already* built in.

For a businessperson with heavyweight data requirements, the XT packs a lot of power, because it can store the facts, figures, names and numbers you need to know.

(Instead of going from diskette to diskette, you can have up to 5,000 pages of text or up to 100,000 names and addresses conveniently stored in one place.)

And by adding an expansion unit with a *second* 10-megabyte fixed disk drive, you get even more high-volume capacity from the system. XT can run most of the same software and accept most of the same IBM hardware as the computer on the left. And its price/performance is nothing less than remarkable.

But for you to choose, there's a lot left (or right) to learn about both members of this growing family. Visit your authorized IBM Personal Computer dealer. To learn where, call 800-447-4700. In Alaska or Hawaii, 800-447-0890.

And see which tool for modern times is right (or left) for you.

IBM*

CIRCLE 269 ON READER SERVICE CARD

The IBM Personal Computer XT

THEY'RE IRRESISTIBLE!

It's understandable why he'd want to steal. He knows learning's a snap with PC Pal and PC Tutor.

PC Pal, for beginners, uses games, animation and sound to teach you the PC keyboard, the meaning and importance of software, and how the hardware operates.

PC Tutor takes you to the intermediate level, teaching higher level computer concepts and PC-DOS.

Both programs create a dialog between you and your PC. Set your own pace while you learn easily, quickly... and inexpensively.

Both programs require 64KB, a double-sided diskette drive, an 80-character display and PC-DOS.

Available at your PC dealer for only \$39.95 (PC Pal) plus \$2.80 California sales tax.

Or

\$59.95 (PC Tutor) plus \$5.20 California sales tax.

Dealer inquiries welcome.

Innovators in Winchester Subsystems!

TALLGRASS AND YOUR IBM® PC

Tallgrass Technologies is the industry leader in Winchester HardFile™ and streaming tape subsystems for the IBM® PC and related computers. Fortune 500 corporations, banks, governmental agencies, and small businesses throughout the world depend on Tallgrass HardFile subsystems for their mass storage and backup requirements.

Tallgrass offers formatted capacities from 6.25 Mb to 70 Mb with integral streaming tape back-up. Our proprietary disk/tape controller with integral 10K track buffer optimizes read/write activity and, coupled with our DMA host interface, offers high performance previously unavailable with 5¼" disk systems.

WHAT ABOUT DATA INTEGRITY?

Tallgrass offers backup on ANSI standard ¼" tape cartridges, instead of the usual floppies, video cassettes, or low-capacity removable Winchester devices. The Tallgrass 12.5 Mb formatted HardFile can back itself up on a \$39.95 data cartridge in less than 10 minutes!

TALLGRASS IS UNSURPASSED

We've done our homework in engineering and building a reliable HardFile subsystem with remarkable performance and convenient backup for the most stringent on-line mass storage and off-line archival requirements.

From \$2,995 U.S. including integral tape back-up. Available from COMPUTERLAND® and other participating computer dealers.

What's new in IBM PC multifunction expansion boards?

Indigo has put together the most versatile expansion product available for the new IBM PC and IBM PC / XT

the PC MultiPak™

- **4 most requested hardware functions**

The PC MultiPak™ includes a serial communications port, a real time clock calendar with a 10 year lithium battery, 0 to 256K memory and optional parallel printer port. The PC MultiPak™ without the parallel printer port is ideal for users with the IBM monochrome/parallel printer adapter installed.

- **Zero memory option**

The PC MultiPak™ is available with no memory installed so you can fill your I/O needs today and still have memory expansion capability to an additional 256K for your future needs. This makes the PC MultiPak™ the perfect mate for the new IBM PC and IBM PC / XT.

- **4 software packages**

The PC MultiPak™ includes our four most popular software packages. **Drive-It™** converts 32K to 320K of extra memory into an ultra-fast drive. **SPOOL-IT™** utilizes up to 64K of extra memory as a printer buffer and eliminates valuable time spent waiting on the printer. **Print-It™** prints any IBM text or graphics screen to Epson printer. **Color-It™** prints screens to IDS printers. Color images can be printed on IDS prism printers. These software programs have received critical acclaim in Infoworld, Softalk, PC Age and Creative Computing magazines. Thousands have been sold separately. This \$200 retail value is included in the PC MultiPak™ at no additional charge. DOS 2.0 Compatible.

EASIBOARD™ THE EASIEST™

1985 technology in 1983. It took longer than expected for the Research and Development Department to meet its challenge: create the most advanced multifunction board for the IBM PC — ahead of present day technology, and more advanced than the original multifunction boards introduced with last year's technology. And above all, make it simple and make it easy. The result: EasyBoard™.

Nine distinct functions in just one IBM PC or XT slot. After surveying business executives and other personal computer users, we discovered that nine computer functions were most desired. We merged them all together, and made EasyBoard as simple as plugging your tv at home.

Memory, Spooler, Printer and Modem Connections, Three Electronic Disks, Chronograph and More.

Esilab gives your IBM PC or XT more memory (up to 256K), three high-speed solid state electronic disk emulators, a printer connection, a communications port for modems or additional printers, a buffer-spooler so you can compute and print at the same time (part of the Esilab memory becomes a memory for your printer), a battery-backed real time chronograph (an extremely accurate clock-calendar), and the ability to connect between two printers when both are connected to one PC. All on just one simple plug-in board.

IBM quality plus Esitech Excellence exclusively at IBM PC dealers worldwide. Esiboard is only available at authorized IBM PC dealers. You'll find Esiboard at the same place

you find the IBM PC — quality retail stores you can depend on to carry only the best microcomputers and enhancements.

Easy to find the best price, too. Try \$325 for Easttech Excellence and a two year guarantee. No need to search through dozens of magazines for low prices. Our lowest prices are at IBM PC dealers. Not anywhere else. And we back our product with a two year guarantee. If your IBM PC dealer does not carry Easttech products, ask him to call us at (404) 923-3186.

SPECIFICATIONS

- Supported for 44K to 256K of Ram Access Memory.
Three high-speed solid state electronic clock emulators, each many times faster than normal clock drives.
Centronics-compatible parallel port for printers or other parallel devices.
Serial RS232C asynchronous communications port for modems, printers or other serial devices.
Extremely accurate chronograph (computerized clock/calendar in real time with local battery back-up).
Buffer/processor which allows use of the computer while printing is underway, eliminating the usual waiting.
Escapade™ feature which allows switching from one printer to another, without the need for a second printer.
When using IBM PC and a better quality printer are connected to the system, the IBM PC will be used for all data processing and data storage.
Ultra high-speed IBM compatible RAM chips, the gold ones.
100% IBM PC and XT compatible.

Eastboard with 9 functions. \$325 (socketed for 256K). **\$395** (64K installed, socketed for 256K). **\$595** (256K installed).

ANNOUNCING THE END OF WORD PROCESSOR CONFUSION

It's one confusing business, choosing a word processor. All those companies assuring you theirs is the most fantastic one of all. And leaving you to cut through all the smoke and hopefully whittle them down to the best one for you.

Well, we can help. If you'll just invest the next three minutes reading this, we'll tell you about a word processor that makes picking the right one a real breeze.

FIRST, A WARNING. There are two things you must do when evaluating any word processor. First, be careful. It's no secret that many of today's claims about being easy to learn and use just don't stand up to careful comparison. Watch carefully for complicated codes and programs that require "training sessions." Secondly, be selective. Buy a word processor you can use on a daily basis, not one that requires another "training session" when someone goes on vacation. In other words, be very careful to select

the word processor that's absolutely the best and easiest to use. Which is what we'll now introduce you to.

WHY ONE WORD PROCESSOR MAKES THE MOST SENSE OF

THEM ALL. Meet WordPlus-PC. It's the advanced, "user-oriented" software package that turns your IBM-PC computer into a word processor equipped with the sophisticated capabilities of far larger, more expensive systems.

THE REMARKABLE

WORDPLUS-PC STORY. In a nutshell, it's this. WordPlus-PC was designed from the ground up to be the very latest in word processing technology. It has all the important features you

could ask for. And the program is so easy to learn and use it defies comparison with other software.

HOW WE CAN BE SO SURE OF OURSELVES.

We're Professional Software, a leader in word processing software with over 30,000 customers contentedly churning out letters and documents around the world on personal and business computer systems. We know precisely what a top quality word processor must do. And we've studied all the shortcomings of our competitors. That's how WordPlus-PC came to be the easiest-to-use word processor ever.

ALL THE FEATURES YOU'D EXPECT.

WordPlus-PC is both powerful and versatile. Its long list of major functions includes movement of paragraphs, global search-and-replace, and creation of multiple "boilerplate" and personal letters with the touch of a few buttons. There are 3-line headers and footers and automatic page numbering. When you underline or boldface words as you type, WordPlus-PC displays them in that form on the screen. You can merge information created by popular spread sheet programs. You'll create personal letters quickly and easily, or merge name and address information from other programs. You can easily create standard layouts for preprinted forms and use WordPlus-PC to prepare

A BREEZE TO LEARN AND USE.

With WordPlus-PC's easy-to-use documentation, you'll be using your word processor right from the first minute. After an hour, you'll feel at home with all the basic functions and ready to explore the more sophisticated ones. After a few hours you'll put the manual away. There are

answers to questions. That's how WordPlus-PC helps you learn. In addition to the help you'll get from your dealer, we're ready to assist you when you call our special toll-free number and talk to one of our carefully trained advisors. This service is available at no charge during the 90 days following receipt of your user registration card. It's all part of Professional Software's total commitment to customer service and support.

SEE WORDPLUS-PC FOR YOURSELF AT YOUR COMPUTER DEALER. Call us today. We'll answer all your questions. And we'll give you the name of the Professional Software dealership nearest you. Then go witness WordPlus-PC in action. Because once

invoices or quotations. For large corporate customers, WordPlus-PC has the capability to merge information from files created by the firm's mini or mainframe computer. You can even type new documents while the system is printing other ones. And you'll find WordPlus fully compatible with virtually all popular ASCII letter-quality and dot matrix printers.

never any complicated or confusing codes to memorize or look up. Rather, the screen's "message area" reminds you how to do what you want. WordPlus-PC's unique keyboard color coding makes things even easier. And whenever there's a question, simply press the HELP function to get back on track.

ALL THE HELP YOU NEED VIA TOLL-FREE PHONE.

Learning something new goes best when you have encouragement, reassurance and

you're sitting in front of WordPlus-PC you'll quickly see where all our confidence and enthusiasm come from. After all, you already own the best personal computer. The best word processor is only \$395. So call us today.

WHIZ KID PUSHES COMPUTER GIANT TOWARD MORE MODERN TIMES.

\$795. Plotter Has 'Charlie' Back In Pictures.

The new Sweet-P™ Personal Plotter™, invented by Whiz Kid Richard Murray, delivers a command performance in high resolution, hard copy graphics when sharing the bill with your IBM® PC.

With a \$795 price tag—Sweet-Plot™ I Software and interface hardware included—somehow Sweet-P's performance seems even sweeter. And when you're ready to take your show on the road, Sweet-P

slips neatly into a slimline briefcase.

Every graphic you'll ever need for business, finance, engineering and science can now be produced quickly and easily. Sweet-P draws colorful pie charts, bar graphs, line graphs, illustrations and alphanumeric labeling. On any paper up to 10 feet long.

On overhead transparency material. At amazing speeds of up to 6 inches per second.

With the Sweet-P Personal Plotter, you're not only able to draw your own conclusions, but communicate them more effectively as well.

Sweet-P
Graphics-
to-Go.

Sweet-P Software Makes It Easy.

Getting into pictures is easy with Sweet-Plot™ I Software. It will have you drawing standard graph formats in minutes—even if you're not familiar with how a plotter works. And for drawing complex business graphics, there's Sweet-Plot™ II Software by BPS™—limited only by your imagination.

So, when you want your IBM PC to become even more modern for the times, plug into the Sweet-P Personal Plotter. Visit your local computer store and see how sweet it is with 'Charlie' back in pictures.

A Complete Graphics Department For Just \$2295

Realize day-in and day-out solid performance from a quiet and capable desktop platter. It's true. For only \$2295* the Houston Instrument HILOT™ DMP-29 will provide you with world-class multi-color hard copy graphics, and deliver a level of quality and performance that you would expect in a plotter costing three times as much.

It's a hard worker. The DMP-29 goes about its job with amazing speed and precision. Unbeatable resolution and repeatability are yours in both 8½" x 11" and 11" x 17" formats, and 8-pen capability assures you of fast attention-free flexibility when multi-color output is required. High pen speed combined with an addressable resolution of 0.001" assures fast, accurate and stepless traces.

It's friendly. You can call 21 different functions directly from the front-panel membrane keyboard. It's tolerant too. The DMP-29 will modestly protect itself from user errors, as when attempting to place a pen in an already occupied stall.

And it's smart. An extensive set of firmware routines makes life easier for the user. A small sampling of the built-in talent inherent in the DMP-29 includes character generation, circle, arc and ellipse synthesis, line type variations, viewport/windowing, clipping and scaling.

For the name, address and phone number of your nearest distributor/dealer, write Houston Instrument, 8500 Cameron Road, Austin, Texas 78753. Phone 512-835-0900, or 1-800-531-5205 if outside Texas. dBASE II™ made easy!

QUICKCODE™

The dBASE II Program Generator

Now dBASE II is made easy with Quickcode by Fox & Geller. QUICKCODE is a program generator, a computer program which writes computer programs.

FAST AND SIMPLE

With QUICKCODE you can generate a customer database in 5 minutes. It's that fast. All you have to do is draw your data entry form on the screen. It's that simple!

NO PROGRAMMING REQUIRED

QUICKCODE writes concise programs to set up and maintain any type of database. And the wide range of programs cover everything from printing mailing labels and form letters, to programs that let you select records based on your own requirements. There are even four new data types that are not available with dBASE II alone.

YOU CONTROL

And since you work directly with your information at your own speed and your own style, you maintain complete control. Telling your computer what to do has never been so easy.

Call us at (201) 794-8883

QUICKCODE, by Fox & Geller. Absolutely the most powerful program generator you've ever seen. Definitely the easiest to use.

Ask your dealer for more information on QUICKCODE and all the other exciting new products from Fox & Geller.

FOX & GELLER

Fox & Geller, Inc. Dept. PCM 002 604 Market Street Elmwood Park, N.J. 07407 (201) 794-8883

Buying a computer takes a little more preparation than learning a few key words and putting on the right pair of pants.

A Stranger in MicroLand

I'm a big fan of yellow legal pads. Oh yes, I know of the Visi, Wonder, Deluxe, Super, and Super-duper Colcs. They're just fine when it comes to figuring out how to equip the new widgeat assembly line in Ashtahula or how to amortize the purchase of a whirlpool bath for the executive suite. But when it comes to spending my money, I get really serious and go to the pads. I fill them with numbers, tables, and charts of advantages and disadvantages. I shuffle them, I order them, I pin them to walls. And then I set out to buy. . . .

Ah, yes, I remember it well. I sat in the parking lot, sweaty hands nervously gripping the steering wheel, my eyes searching the street hoping not to see anyone who might recognize me in my moment of vulnerability. Over and over again, I tried desperately to remember all the arcane words and ideas I had struggled to learn over the course of several months studying Creative Computing. (There was no PC Magazine back in those dark, dark ages 6 years ago.)

**WHAT DID
RS-232C stand for? For
that matter, what the
heck was a modem?**

Now, was it the RAM (REM?) that went on the disk and the CP/M that plugged into the ROM? Did I need an asynchronous, a serial, or an RS-232C port for a modem?

What did RS-232C stand for? For that matter, what the heck was a modem?

The sun began to set, and with the approaching darkness came a surge of courage. I put down my crib sheets, cinched up my tie, and left the safety of the car. I was headed for my first close encounter with a computer dealer—in this case a pioneering outfit in upstate New York with a cute name like “The Little Byte Shoppe.” I was a reporter with a daily newspaper then, doing all of my work on a video terminal tied into a belky mainframe computer. I was fascinated by the idea of microcomputers (the term “personal computer” was not yet born) and I decided to see if I could use one in

my free-lance writing.

I mentioned my tie a moment ago because I remember how it seemed very important at the time—first impressions and all that. More importantly, I wanted to make certain the salesman knew that I meant business.

Well, as I reached the entrance to the Little Byte Shoppe, the door suddenly burst open and a horde of kids came flying out. Must have been the Vestal Junior High School chess club on a field trip, I decided. I caught the door and stepped into a scene straight out of “I Was a Teen-Age Computer Nerd.” The average age of the crowd was about 16, if you left out the grade school wunderkind with a soldering

iron, perched on a stool at the repair bench.

My tie won me no favors. I finally identified a sales clerk: He was the 17-year-old playing chess by flicking the front panel switches of an Altair. The process required a double swap from chessboard notation (Pawn to King's Bishop 4) translated to hexadecimal code. It made me dizzy to watch, but even my vertigo failed to win me any notice. The adolescent chess whiz never acknowledged my presence; why bother attempting to sell something frivolous like a microcomputer to a businessman in a suit?

I finally interrupted him to ask a pithy question like, "Which machine do you think I should buy for word processing at home?" He flicked two more switches, grunted in appreciation at the Altair's prescient castling move, and then proceeded to give me his professional opinion. I was lost somewhere between the first bit-register and the second RAM-refresh nanosecond of his reply. I mumbled my thanks and retreated to half an hour of wandering around to the various plays stations. Finally, I backed my way out of the store, never to return.

Four years later, I found myself working in an office full of sophisticated desktop microcomputers. I was writing speeches, reports, and press releases with all of the ease offered by a personal word processor. But I was going home at night to write novels and magazine pieces on a tiny portable typewriter. I decided the time had come for another pass at a computer store.

THE DOOR
suddenly burst open and
a horde of kids came
flying out.

The retail market had changed considerably. The phone book now listed various Computer "Lands" and "Worlds" and "Business Centers." There was not a Shoppe in sight. I refreshed my lexicon of computerese and headed for one of the franchises. Considerably more assured of my self-image, and perhaps with a dim

VISIWORD MAKES IT EASY TO PUT YOUR BEST THOUGHTS FORWARD.

The better your writing is, the greater the opportunities are to clearly communicate your thoughts, sell your ideas.

The VisiWord™ program for the IBM® Personal Computer can help you make the most of every writing opportunity. It's available for both the IBM PC and the IBM XT with hard disk.

You'll write more effectively with the VisiWord program, because it's designed with the needs of the business professional in mind. It will also help you and your staff work more productively, because the VisiWord program has all the word processing functions your secretary or assistant needs.

You'll find the VisiWord program easy to learn, simple to use. And everytime you use it, you'll be pleased by how much less effort it takes to produce memos, letters, proposals and reports that reflect your very best efforts.

Writing, editing and printing your thoughts are done in a single process that's fast—without waiting for typing and retyping. And your results may be even more professional-looking because what you see on your screen is exactly what you get in your final printed result.

Easy to learn.

You're ready to write the instant the program is loaded. A simple, uncluttered screen display presents a multiple choice "menu" of functions.

You simply choose which function you want to use and the on-screen prompts tell you how to use it every step of the way.

A QuickStart™ course is included to get you or anyone on your staff producing letters and reports within 30 minutes.

Even easier to use.

There are no hard-to-use "control" characters. A single keystroke selects all primary program functions—Insert, Delete, Copy, Move, Find/Replace, Storage and Print.

The most-used editing functions are also easy-to-use, because they're

done with a single Function Key. These include Center Line, Underline, Delete, Delete To End Of Line, Undelete, Indent, New Page, Decimal Tab and Again.

Dynamic full page formatting lets you see instantaneously on the screen exactly what you'll get on paper. "Word wrap" is automatic for both creating and editing documents.

Additionally, time-saving "help" screens, and a clear, concise User's Guide in plain English give you the assistance you need at a glance.

More powerful editing with much less effort.

The VisiWord program lets you move, copy, or delete columns of information as well as paragraphs, and even pages, simply and easily.

It helps you make your documents look more professional by automatically formatting and numbering each page, and adding headers and footers if you wish.

And the VisiWord program's split screen windowing function lets you see two documents at once, and take parts of one and incorporate them into the other.

You can even change your mind about a change—the "undelete" feature recalls lines of text you've deleted.

Edit one document while you print another.

The "print spooling" feature of the VisiWord program will save you important time by letting you print out one letter-perfect document at the same time you're creating another on your screen.

VisiWord becomes even more powerful with other VisiSeries™ programs.

Budgets and plans created with your VisiCalc® program can be automatically included in your

VisiWord report, using the windowing capability. Or you can automatically merge names and addresses selected from your VisiFile™ program into a form letter.

The VisiSpell™ program will proofread and help you correct spelling errors.

All total, there are nine VisiSeries programs to help you work more productively with your IBM Personal Computer now. And in the future.

VisiWord leads to VisiON™.

To make sure that the VisiWord program helps your word processing today and tomorrow, we're making it an upgradable part of our revolutionary VisiON integrated software system of the near future.

Discover how using the VisiWord program will make it easy for you to put your best thoughts forward. See it at a computer store near you, or write our Customer Service Department, 2895 Zanker Road, San Jose, CA 95134.

VISICORP™

A lot of quality products from companies like Visicorp, Ashton-Tate, IUS, Hayes, and Corona Data Systems have made life for the IBM PC user a whole lot easier. And more productive.

Add Curtis to that list. Because now, thanks to our PC Pedestal™, you can "tilt and swivel" your IBM display, instead of your body. No more bobbing and weaving to avoid glare. No more neck and eye strain. That means you'll pay a lot more attention to what you're doing, then to how uncomfortable you're feeling.

To make your life even easier (and a bit more comfortable), you can have extension cables, too. A 3-foot set for your display unit and a 3 to 9-foot coiled cable for your keyboard let you arrange your system any way you want. They're fully shielded, and come with the highest quality connectors.

So next time you sit down at your IBM PC, make yourself a little more comfortable.

Available at all Computerland stores or your local computer dealer. In Canada: RMP Ltd., P.O. Box 251, Ajax, Ontario, Canada L1S 3C3, (416) 668-4048, Telex 06986766

IRMA is more than just another pretty interface.

IRMA™, the Decision Support Interface™, puts your IBM Personal Computer on-line in big business systems. Inexpensively.

She's the first direct link between the PC and your IBM mainframe data base—a printed circuit board that simply slips into your PC and attaches via coaxial cable to your IBM 3270 controller.

Now business decision makers can access, store, and evaluate uniform mainframe data using today's most powerful decision making tools.

IRMA is a pretty big competitive edge in these modern times.

For more information write TAC, 120 West Wieuca Road, N.E., Atlanta, Georgia 30042 or phone (800) 241-IRMA.

CIRCLE 444 ON READER SERVICE CARD

recollection of my previous excursion into MicroLand. I was dressed in a faded pair of jeans and an old sweater—my essential writing clothes.

I WAS LOST
somewhere between the first bit-register and the second RAM-refresh nanosecond.

The store fairly gleamed of glass and chrome. Displayed around the room, like so many high tech objets d'art, were the considerably more finished microcomputer products of the 1980s: IBMs and Apple IIs and Osbornes and the like. I worked my way from front to back playing idly with each of the machines for nearly an hour, completely unmolested by the two salesmen who were engaged in a fierce battle of Space Invaders. I was finally approached by a young woman who was in charge of the cash register. I told her I was looking for a computer for the home. Without asking me a single question, she directed me toward the Atari video game display. It must have been the blue jeans.

I finally did buy a microcomputer—an IBM PC, by the way—and with help from some knowledgeable and honest salespeople at retail stores and mail order operations. But it was a long, long process, and closer to the search for a used car than to the purchase of a household appliance.

I learned that you can go home again, without a computer.

The marketplace has continued to change, and you should be able to find someone to sell you a computer no matter what the uniform of the day, perhaps with a little help from PC Magazine.

In this issue, we take a tour of the state of computer retailing today. PC Magazine bankrolls a "computer virgin" on a shopping trip. We venture to the end of the telephone line at a mail order house. We sell PCs for a day. We cast some light on the Gray Market. We explain the economics of leasing and renting. We read you your rights as a consumer. It's all part of trying to keep the customer satisfied.

—Corey Sandler.

If you guessed that a Practical Peripherals Microbuffer™ printer buffer saves time, you're right. For the way it works, this inexpensive product is the most practical addition to your microcomputer system ever.

With Microbuffer, you don't have to wait for your printer to finish before you resume using your computer. Data is received and stored at fast speeds, then released from Microbuffer's memory to your printer. This is called buffering. The more you print, the more productive it makes your workflow.

Depending on the version of Microbuffer, these buffering capacities range from a useful 8K of random access memory — big enough for 8,000 characters of storage — up to a very large 256K — enough for 256,000 characters of storage.

Practical Peripherals makes stand-alone Microbuffers for any computer and printer combi-

nation, including add-on units especially for Apple II computer and/or Epson printers. Each has different features like graphics dumps and text formatting besides its buffering capabilities. You can choose one that's just right for your system.

Best of all, they're built to last and work exactly like they're supposed to.

If you're still guessing whether you can afford to have one, talk with any computer dealer. That's the best way to find out how practical a Practical Peripherals Microbuffer is.

Add color to your business with ColorBIZ®

Introducing ColorBIZ®, the color software inventory program developed exclusively for the IBM Personal Computer®. Simple; because it works, reliable because all programs are designed with extensive error checking. Each software package includes color coded manual, program, data and backup diskettes...just in case. ColorBIZ® has been developed for businesses that expect performance and flexibility, and can be applied to satisfy even the most unique business concern. Standard features in the ColorBIZ® package include:

- *User's Manual color coded to business application
- *Browse feature for rapid & selective scanning
- *DataBase retrieval capability
- *Charts & graphs to illustrate performance
- *Password security to restrict access to sensitive data
- *User selectable report generation
- *Single key response for improved operation
- *Reorder information automatically identified

- *User definable soft keys for automatic input
- *Provides usage & margin analysis by month & year-to-date
- *Defined reports include:
 - On Order/Order Recommendation
 - Master Parts Listing
 - Inventory Analysis
 - Physical Inventory

Letters To PC

Room For Expansion

With the introduction of the PC-XT and the rampant rumors about the PC II, I have but one wish. I do hope that IBM will provide a way to update the old IBM PCs to perform some of the new features.

I would very much like to be able to use the 64K chips on my motherboard, rather than the 16K that my PC has, not to mention the three extra slots in the back. One would think that Big Blue would foresee the possibilities for expanding and improving the original PC, and would provide a reasonably priced modification to update them. I guess we will now see just how consumer-oriented IBM is.

Gary B. Kendrick
Chatanooga, Tennessee

Sorry, Gary, you're out of luck. If your PC happens to be under contract with IBM and something catastrophic happens to your motherboard, Big Blue just may replace it with one of the newer models that can handle the beefier chips. Some manufacturers are planning to bring out kludges that they claim will let you insert 64K chips into the older sockets, but we haven't yet tested any of them. The computer market is moving so rapidly these days that these kinds of changes are commonplace—the unofficial motto of this industry is, "If it works, it's obsolete."—Ed.

The Melody Lingers On

In my article "A Musical 'Invention'" (PC, Volume 1 Number 12), I inadvertently left out a period in the listing of the music lines. In Figure 1 on page 421, the melody line should have ended with a period after the A1 (A1.), giving the A note six beats instead of four. Likewise, the harmony line should end with a pe-

riod (F1.). This would result in the intended three beats to a measure, traditional to a waltz.

In addition, on page 419 in the paragraph beginning "A dot . . .," the second sentence should read, "For instance, G1. will play G for the length of a whole note and a half note run together." The dot after G1 makes a difference of two

beats.

I've already gotten feedback on the article from a Seattle-area high school trumpet player, who has a PC and is using the article as a basis for writing three-part harmony for extra credit at school.

Bunny Hammersla
Edmonds, Washington

What's Up, .DOC?

Regarding "The Simplicity of Qwert" (PC, Volume 1 Number 12), I would like to thank Tom McLaren for the comprehensive review and to provide additional information.

The current version of Qwert runs under PC DOS 2.0 (with 96K) as well as

with DOS 1.1 (with 64K); a monochrome display is now just recommended (instead of required); and Qwert now also runs on the PC-XT, Compaq, Columbia, Hyperion, and other PC-compatible computers.

Qwert can be used to edit ASCII files with any extension. When an extension is not specified, .DOC is implied, and the default margins and tab stops are typical for a letter. When an extension is specified, the default margins and tab stops are typical for a program. The restriction to .DOC files applies when "LIST document names" is selected from the menu. In this case, only file names with .DOC extensions are listed.

Hank Krejci
HFK Software
Denbury, New Hampshire

Thank-you Note

As chief programmer and sweeper here at Once Begun Computations, I would like to thank Corey Sandler for his review of our Kaleida program ("PC Arcade," PC, Volume 1 Number 11). Kaleida went through 45 major evolutions before we judged it to be finished and worthy of our guarantee. Sandler's appreciative comments helped make the long and oftentimes weary-eyed hours worthwhile.

M. Gary Cohen
Once Begun Computations
Seersport, Maine

An International Date Line

I have a few comments to make concerning Paul Somerson's article, "Tie Me IBM Down, Boys" (PC, Volume 1 Number 11).

Yes, Australians probably have less "discretionary income" than Americans, but perhaps they also have more discretion. Most of Australia has an ideal climate; perhaps this is why Australians are more likely to buy sailboats and surf

Getting **1-2-3™** to do
graphics on an
IBM® Monochrome
takes a lot...

Exactly one Hercules Graphics Card.™

What a lot of people have learned the hard way is that you can't run 1-2-3's graphics on the IBM PC monochrome display. That is, until now.

Now, with the Hercules Graphics Card, you can run 1-2-3's graphics on the monochrome display. (Of course, 1-2-3's spreadsheet and information management functions work too.)

But naturally the Hercules Graphics Card does a lot more than just make a great program like 1-2-3 better. It gives you high

resolution bit mapped graphics on the monochrome display—something the IBM monochrome card simply can't do.

The Hercules Graphics Card replaces IBM's monochrome card giving you text compatibility or two pages of graphics, each with a resolution of 720h x 348v. You'll get the monochrome's high quality character set, software compatibility with programs like VisiCalc®, WordStar® and dBase II,™ and a printer interface for any parallel port printer.

Included with each Hercules Graphics Card is software that enables you to use the PC's BASIC graphics commands. Or you can program in other languages and use Graph X,™ our set of assembly language graphics subroutines. (Graph X is available now for only \$50 and includes a graphics screen dump.)

The Hercules Graphics Card. Only \$499. A small price to pay for graphics on the monochrome display. Call or write for the name of the dealer nearest you.

CIRCLE 261 ON READER SERVICE CARD

IBM® PC Owners...

First we solved your printer problems

Now we give you

graphics

ConvertaBuffer™

IT'S A CONVERTER.

There was a time when buying a letter quality printer meant giving up graphics. Now, however, ConvertaBuffer™ gives you the best of both worlds by allowing you to print the business graphs generated by programs such as MBA and 1-2-3 on letter quality printers such as Diablo and NEC. And, the quality of these graphs are as good as those drawn by dot matrix printers such as the IBM/Epson. ConvertaBuffer translates the Epson-format graphics data output from MBA, 1-2-3, and other packages with graphics capability into the format necessary for printing on a letter quality printer.

IT'S A BUFFER.

Generating graphics requires the outputting of a large amount of data to the printer. ConvertaBuffer speeds this process by receiving the data as fast as your PC can send it — 1,000 characters per second; storing up to 64K bytes of data in its built-in memory buffer; and then sending it to the printer at the printer's slower speed — 25 to 55 characters per second. This allows you to go on to other work without having to wait for the printer to finish printing.

EASY TO INSTALL.

ConvertaBuffer comes with its own built-in cables which plug directly into your PC's printer adaptor and your printer's cable without removing the cover of the system unit — there is no need to buy an extra cable. And, each unit has its own fully regulated DC power supply — the unit does not steal power from the PC or the printer.

ConvertaBuffer also features a convenient front panel switch which resets the buffer to abort the printer output if desired. And, the status light indicates when ConvertaBuffer automatically switches to the graphics mode.

HAVE YOUR CAKE AND EAT IT TOO!

The parallel-to-parallel ConvertaBuffer for graphics is the latest member of the ConvertaBuffer family. The original ConvertaBuffer enables you to connect any RS-232C serial interface equipped printer directly into the parallel printer port of your PC with up to 32K bytes of printer buffering.

Ask your dealer about ConvertaBuffer for graphics and the original ConvertaBuffer. Or contact us.

Letters To PC

boards than computers.

I am very pleased to find that programmes using British spelling are, or will be, available. I hope they will be marketed everywhere, for what Americans fail to realise is that of all English-speaking countries, only the United States has its own spelling system, and only Americans write dates month/day/year. This is often overlooked.

As we admit that the IBM Keyboard can be, and has been, improved, I hope we can agree that the American system is totally illogical. There are two other ways of writing the date numerically: Australians, in addition to New Zealanders, Canadians, and the British, write the date in a logical progression from shortest time period, the day, to longest, the year. As Somerson mentioned, this creates some confusion in the U.S.

Now let me introduce you to the European alternative, which is also being used more frequently in Canada: year-month-day. The advantages are many, the drawbacks none. There can be no confusion when the date is written in this manner; I have never had a cheque returned (and I have had both American and Canadian bank accounts). Just think how much easier it would be to scan through the DIR files looking first for the correct year, then the month, and finally the day. Those of us who use computers must appreciate the logic of that. I hope to find a way to change PC-DOS 1.1 so that it will list dates as I want them.

Thanks very much for expanding the horizons of PC Magazine. I look forward to articles about countries in addition to Australia and France.

James Micklawright
Vancouver, British Columbia, Canada

Thank you for your comments on British English and various ways to construct dates. You will perhaps forgive us our orthographicentricity when we tell you that we prefer the British spellings for that voraciously-shodded color between

block and white—although our style insists on gray with an a. Also, it's much more glamorous to spell glomour with o u: glomour, don't you think? In any case, we've expended our horizons as for as Japan in this issue. See "Over There: IBM in Japan;" we think you'll enjoy it.—Ed.

Save That File!

I read with interest Mark Zachmann's "PC Tutor" column in PC, Volume 1 Number 11, and thought that I might be able to offer some more information on the subjects of erased files and hidden files.

PC-DOS does not provide any easy or regular means either to recover hidden files or to control the file attributes, such as "hidden," "system," and "read-only." However, there are programs available to do all these things. My Norton Utilities package includes tools that make this quite easy, and similar programs are also available from other authors.

Many people do not understand how it could be possible to recover an erased file, but a little analogy can help make it clear. Erasing a file from a disk is similar to taking a file folder out of a filing cabinet, and throwing the pages from the folder into a waste basket. The data from the file hasn't been destroyed, it simply has been discarded. Eventually the data on the disk will be completely lost, when other data is written onto the disk sectors where the old data was.

An erased disk file can be recovered by a process that is analogous to digging through a waste basket, looking for something you threw away. Provided that the original data is still in the disk's "waste basket," it can be recovered. A program like UnErase, which is part of the Norton Utilities package, can do the tricky technical task of re-allocating data to an erased file. If the file recovery program is well-written, the process can be very easy.

Anyone who uses an IBM PC would be wise to get a good set of file recovery programs, and not just to get back files that were accidentally erased. Good file recovery programs can help you get back data that was lost due to damage to a diskette, or due to scrambling of a disk's file storage tables. Using your PC without file recovery programs is like driving a car without insurance, or swinging on a trapeze without a safety net.

Peter Norton
The Norton Utilities
Santa Monica, California

The Correct Time Is . . .

I recently submitted the TellTime program by Lloyd Onyatt ("Learning to Tell Time With TellTime," PC, Volume 1 Number 11) to my IBM PC, but it did not run properly. I deduced that either my PC is not running right, I keyed the program in incorrectly, or there is a typo in the printed program.

I have checked my input and can find no typing mistakes. Is the program correct as it is printed? If so, then I must assume that my PC is on the way to the repair shop.

Charles L. Mudd
Woodbridge, Virginia

You can call off the repairman. In adding some features to the original program, we inadvertently introduced two errors. Lines 750 and 820 are incorrect. They should read:

```
750 GOSUB 1270  
820 IF ANS = 24 THEN 1390
```

—Ed.

A BASIC Error

I just received my first issue of PC (Volume 1 Number 11) and found the information contained within to be far beyond my expectations. Thanks for a good magazine.

In the article "Back to BASIC," there is a problem with the memory test pro-

THE WORLD'S BEST SELLING IBM PC BOARD,

Now you can get the world's best selling IBM PC board at the world's best price. Quadram's Quadboard is now more of a bargain than ever. With a new low price, but that same Quadram Quality.

All-On-One-Board

Quadboard is the multifunction board that lets you get the most out of your IBM Personal Computer, PC XT, and PC II. Because Quadboard combines six of the most-needed PC functions onto one card using just one expansion slot.

This leaves the PC's other slots open for all your future needs.

Quadboard comes with a parallel port designed to operate most printers and other parallel devices.

There's a serial port, too. Use it to connect your PC to modems, printers, and other serial devices to expand your data communications capabilities. The serial port can be addressed as COM1 or COM2 and fully supports IBM PC communications software.

Quadboard also comes with an on-board chronograph. A real-time clock/calendar that always keeps your system's clock up to date. Even when your PC's been off for months!

Plus there's plenty of memory space available. Quadboard is expandable in 64K increments to give you up to

256K of RAM. The memory rows are fully socketed. With parity and checking standard.

Plus QuadMaster Software, too

Quadboard comes with a complete software package. The QuadMaster disk. With programs that let you use part of memory as multiple solid-state RAM Drives. Super-fast drives that let you store information for easy access.

Plus there's Qspool. The program that lets you turn your memory into a print buffer. Choose from 8K to 56K of buffer space. And compute while you print. No more waiting.

And Qswap helps take care of your printing needs. Easy-to-use, this program lets you change line printers 1 and 2 back and forth. With a few simple keystrokes. As often as you like.

The First and Only Is Still the One and Only

Quadboard is the number one IBM PC enhancement board on the market today.

Nothing even comes close. Because Quadboard is designed with performance in mind. Engineered for

FOR THE WORLD'S BEST PRICE.

dependability. And built in the tradition of Quadram Quality—the symbol that you are getting the finest board available.

The Best for Less

And now, with a new low price, the best multifunction board in the world has just gotten better. So put Quadboard in your PC. And put a little money back in your pocket.

And remember to ask your dealer about our full line of IBM PC enhancement products.

Quadboard by Quadram. Still the first and only board your IBM PC may ever need.

QUADRAM

MULTIMATE

Letters To PC

gram on page 548. After running the program, I got a BAD and a BEEP for all 8300 A variables. I carefully rechecked my input and it was correct.

The problem seems to be in line 30, which reads as follows:

```
IF A(Y) - A(Y) <> 1 THEN PRINT  
"BAD": BEEP
```

I changed the 1 to a 0, and everything works fine.

Stephen Terrell
Lexington, Kentucky

According to our technical editor, Bill Mochrone, you're absolutely right. Thanks for the tip.—Ed.

Too BASIC

I am a subscriber to PC and I think it is perfect, with one exception. You publish articles for beginners in BASIC, but only occasionally for people who are relatively familiar with BASIC. "Back to BASIC" (PC, Volume 1 Number 11) provided great information on POKING to simulate hitting the Caps Lock key. How about giving us non-novices a demonstration program on how to Call a machine language program from BASIC and return?

Brad Cottingham
Philadelphia, Pennsylvania

PC Magazine will be giving ever-increasing attention to the growing number of people developing their own programs on the IBM PC.—Ed.

A View From The Cockpit

As a commercial and instrument pilot, I agree completely with Trevor Thomas's critique of Will Fastie's review of Microsoft's Flight Simulator (Letters to PC, Volume 1 Number 11).

I happen to be one of those who, after reading Fastie's review, purchased the program. Apparently Fastie spends little time behind aircraft controls or he wouldn't have been so enthralled by the program. Flight Simulator is definitely

interesting and excellently written. But amazing? Hardly!

Microsoft claims in its advertising that the program "features a full-color, out-the-window flight display." What Microsoft doesn't say is that you must have a composite color monitor or connect your PC to your television set to get the full color.

How many PCs have you seen hooked to home television sets, Microsoft?

Gary Hopps
Lowville, New York

Truly Dedicated

As an experienced and dedicated word processing operator, I do not agree with the philosophy of microcomputer users concerning word processing. As a general rule of thumb for an office environment, if more than 25 percent of machine time is to be devoted to word processing, a dedicated word processor would be better suited for that office than a microcomputer.

Dedicated word processing systems offer many more functions and features, and have better hardware and software support. Though the cost may seem higher, in the long run a dedicated word processor is more attractive.

If computing capability is needed, most of the dedicated word processors offer operating systems that allow them to be programmed and to run data processing software.

Max Trejo
Albuquerque, New Mexico

In Defense of Volkswriter

The day PC, Volume 1 Number 12 arrived was a good day for reading. My computer was tied up printing 30 copies of a document for a mailing. You can imagine my surprise when I read Edward Madory's letter to the editor complaining that Volkswriter would not print more than one copy of a document at a time. At that moment, my copy of

Volkswriter was doing what Madory said it could not do. I've had no problem printing with either the 64K or 128K version of release 1.2.

The mechanism for printing multiple copies is not as obvious as it is on some other word processors, but the manual is clear on how to get it working. Madory's problem may be in his copy of the software rather than in Lifetree's suggestions.

In general my experience with Volkswriter has been very good. I would hate to see your readers spend a lot more money than they need to because of Madory's isolated experience.

Robert Thompson
Armstrong, Pennsylvania

Screen Gems

I am thankful for some of the photographs of different software programs in other computer magazines. Creative Computing, for example, prints many such photos, but they don't specialize in the PC. That's why I think you should run photographs of what software looks like on the screen.

The pictures you do run are appreciated. Tell your artists they are doing an A+ job, along with the writers.

Scott Hysom
Mercer Island, Washington

We've been looking for a camera that produces really excellent screen photos—merely good is not acceptable to us. You will be happy to note the appearance of several screen photos in this issue. There are many more to come, and, in addition, an article about these cameras will appear in an upcoming issue.—Ed.

Printing With Prowriter

Some time ago I wrote to PC about the fact that I could not get my Prowriter to print when I used the PrtSc Key. After 3 months, Leading Edge finally answered my letter, and told me which switch set-

Letters To PC

tings to use. Perhaps you'd like to tell your readers.

If you have a Prowriter, the switch settings you should use with your PC are: switch 1-2, 6, and 7 closed; switch 2-7 closed.

Michael Trombetta
Manhasset, New York

Feeling Left Out

We are one of the leading manufacturers of "spike" and "noise" suppressors in the country and have been for over 14 years. Yet when your writer Winn L. Rosch did a cover story on the field, "Block That Bolt, Hey" (PC, Volume 1 Number 11), we weren't even mentioned on your list of available source manufacturers.

We manufacture Spike-Spiker, a line of unique transient voltage surge suppressors and AC power line noise filters, which are all available as power consoles and plug-in units.

Charles F. Kerchner, Jr.
President, Kalgo Electronics Co., Inc.
Bethlehem, Pennsylvania

We've had a large response to the series of articles on maintenance and power problems in Volume 1 Number 11, especially from manufacturers offering new and relevant products. Clearly, this field has grown very quickly, and even Winn Rosch's exhaustive treatment could not mention every available product.—Ed.

Power Line

As a manufacturer of power conditioning and monitoring equipment, I was very interested in PC, Volume 1 Number 11. Winn Rosch is to be congratulated on his uncomplicated presentation of these mysterious and elusive power problems.

A few months ago, RKS Industries established a "Power Hotline," offering toll-free consultation on power requirements and problems. The number for this service, which continues to be very

popular, is (800) 892-1342. In California, call (408) 438-5760.

Thanks for passing this information along to your readers.

Richard Petrillo
President, RKS Industries, Inc.
Scotts Valley, California

Questionable Value

In his article, "The Fundamentals of BASIC" (PC, Volume 1 Number 11), Fred Brack states that one of his main purposes is to explain the function VAL. However, he neglected to mention the following defect in the way this function is defined in PC BASIC.

If you put $AS = "1.2\%"$ (i.e. a floating point number followed by the percent symbol, which BASIC uses to identify integer quantities), then the command $v = VAL(AS)$ yields a "syntax error" message.

The way to avoid this is to read the string only up to the percent sign:

```
x = instr(AS, "%")  
If v < > 0 then v = VAL(left$(AS, v-1))  
else v = VAL(AS)
```

Kerson Huang
Marblehead, Massachusetts

In Defense of Dieting

We would like to thank Corey Sandler for reviewing the Diet Monitor package (PC, Volume 1 Number 11) and for giving us the chance to reply to some of his criticisms.

Analyzing diet and nutrition is a long, tedious operation when it is done by experts with pencil and paper; a computer can do it fast and in greater depth. Diet Monitor is a large system of programs that do this in more detail than any other nutrition system available.

Diet Monitor gives you a detailed analysis of your diet in six reports, which describe nutritional deficiencies and excesses and list the top foods responsible for those nutrients. For instance, if you are short on Vitamin B-12,

you will get a "lecture" on the subject and a list of 15 recommended foods. A Histogram graph shows deficiencies and excesses at a glance.

Computers can be fun to use; no one who has ever stood in an amusement arcade or heard a PC try to sing the "Blue Danube Waltz" could ever deny that. But computers also exist to educate and inform. Games have their place, but so do nutrition and health.

G. Ray Camrass
Camrass Corporation
Dover, New Jersey

Corey Sandler replies: The basis for a valuable, easy-to-use program is present in Diet Monitor. I hope it can be fully developed toward that end.

In Corey Sandler's review of Diet Monitor, he says, "there must be more elegantly produced applications than this one." There is at least one. Nutricolic by Micromedex calculates 21 nutrients based on the user's recommended daily allowance (RDA), shows results in bar graph and in numerical data form, and shows the user's deficiencies based on his or her RDA.

Moreover, this is an easy-to-use program. Foods are entered by name rather than by code. Besides being easy and fast, this reduces the chance of inadvertent error. It is easy to enter 0765 when you mean 0756, but you are unlikely to enter "chicken" when you mean veal.

The program prompts the user throughout; there is no need to refer to the manual constantly. The manual does not contain a food list, because none is needed. Menu function 3 displays the food directory, which is divided into subdirectories for convenience. Impatient users need not even wait to consult the directory. They can enter the desired food, and if it is not listed as such, the program will search for an alternative. A search for "roll," for example, will produce "hard roll, hamburger roll,

AST & PCnet™ for IBM® PC

PCnet is the first local area network designed specifically for the IBM Personal Computer. It consists of the necessary hardware and software to set up a powerful, yet cost effective local area network for the IBM PC. While others make claims, PCnet is a local area network proven to be successful by hundreds of installations in IBM Personal Computers.

AST & PCnet Hardware:

- CSMA/CD LAN technique
- 7000 feet max. distance
- Low cost CATV Coaxial cable as medium for transmission
- 1 Megabit per second transmission
- Optional Mainframe connection (e.g., AST-SNA, AST-5251, AST-3780 etc.)

AST & PCnet Software:

- Disk Sharing
- Unlike other networks,

PCnet does not

- demand expensive file server or proprietary hard disk systems for disk sharing. Almost any PC DOS compatible hard disk including IBM's can be used for disk sharing
- File locking
- Provides locking to common data files so that common files are only accessed by one user at a time
- PC Sharing (Multi-tasking): Allows user on 1 PC to run command on another PC in the same network

as if the command had

- been entered on that PC's keyboard
- Printer Sharing
- Allows PCs to share printers installed in other PCs.

Letters To PC

frankfurter roll, dinner roll."

Once entered, a meal can be analyzed for one person, based on age and sex, and then re-analyzed for others. Thus a family can easily see that a meal that meets a man's nutritional needs may be inadequate in some areas for his pregnant wife, and oversupply their 6-year-old son.

The program contains about 400 foods and provides room to add 75 more. So if, as Sandler suggested, your diet runs to "rattlesnake meat and dandelions," you can add them to your database.

An updated version of Nutricalc, Nutriplan, is now available.

East Northport, New York

Spellbound

I have had my IBM PC for about 3 months now, and so far have used it primarily as a word processor with Spellbinder. I wholeheartedly agree with all the positive things Will Fastie had to say about Spellbinder in his review (PC, Volume 1 Number 11) and disagree with a number of the negative ones.

As Fastie points out, Spellbinder makes extensive use of the function keys. I have exercised my eye-brain-finger system with these function keys quite a bit while using Spellbinder, and I have come to wonder what the concern regarding function key placement is all about. I find the argument about having to move one's eyes off the screen to look at the function keys a bit weak, and I think that the Spellbinder people have done a good job of assigning keys to functions.

I have not used WordStar, so I did not experience Fastie's problem of mixing up procedures. But I specifically shied away from choosing WordStar because it uses control key sequences. I strongly disagree with Fastie's suggestion that Spellbinder should have for-

gone use of IBM's function keys in favor of the control key sequence approach.

I agree that an index is a necessary improvement for the manual. Spellbinder is a powerful and flexible system; as such, there is a lot to learn about it. I confess that I went through some painful hours in learning the system, but now that I have learned most of it, I think it is great. I join Fastie in applauding Spellbinder's capacity for handling just about any word processing chore. In addition, I add a user's positive response to some of his user-oriented concerns.

Portland, Oregon

Communications Lingo

After reading the computer communications glossary compiled by Katie Seger (PC, Volume 1 Number 9), I felt compelled to comment and expand on some of the definitions.

1. Baud. The baud is not a unit for measuring data transmission rates. It is, in fact, a unit derived from telephony that measures the signaling rate on the line. In simpler modems, this signaling rate is identical to the bit per second rate; this has led to the misconception that the term baud equals bits per second, which it does not. As an example, in the Bell 212, the baud rate on the line is 600 whereas the bit rate is 1200 bits per second.

2. I believe it would be proper to refer to "lease line" as "leased line."

3. SDLC. SDLC is similar to bisync the way Ferraris is similar to Model T Fords. SDLC is a full-duplex protocol while bisync is half-duplex. SDLC is a much more general protocol, allowing outstanding blocks, more complex error-recovery and control than bisync.

4. Synchronous Transmission. The definition given, "in which the timing of each bit of data is previously controlled," would be correct for either synchronous or asynchronous transmission.

In synchronous transmission each bit time is controlled as well as each character time, and blocks are submitted asynchronously. In asynchronous transmission, each bit time is controlled and each character time is controlled with each character transmitted asynchronously.

5. Voice Grade Lines. Voice grade lines can be used for the data rates theoretically up to approximately 24,000 bits per second. In a practical sense, they are being used today at rates up to 4,800 bits per second at half-duplex and technology can be expected to provide 4,800 and 9,600 bits per second in full-duplex in this decade. Higher rates will remain difficult to achieve until technologies push to the theoretical maximum of a 3,000 bertz channel.

I hope the above information will be useful in the development of additional glossaries and a better understanding of the communications channels.

In All Fairness . . .

I've read in PC and elsewhere about MicroPro's insensitivity toward end-users of its products, and I don't think the company deserves the bum rap it's been getting.

We use WordStar daily to support our small publishing company. Four letters that we wrote to MicroPro regarding bugs in earlier versions of WordStar were answered completely and relatively promptly. When the company released new versions of WordStar, we obtained copies (complete with documentation) for a mere \$5 through our dealer.

Finally, MicroPro didn't copy-protect WordStar and even publishes the source code for much of the program. That means it's easy for us to patch it, so we have versions that match our particular hardware and needs.

BUY YOUR COMMUNICATIONS SOFTWARE WHERE THE BIG 3 PERSONAL COMPUTER MANUFACTURERS BUY IT.

There's a reason the world's largest PC makers come to MICROCOM™ for communications software.

We're the communications experts. Our software packages and protocols are fast becoming the standard of the industry.

MICRO/Terminal™ for Apple® II, IIe, III and IBM® PC users.

With MICRO/Terminal you can easily transfer files to in-house computers, or remote databases like Dow Jones,™ The Source™ or CompuServe®. Directly, with a minimum of effort.

MICRO/Terminal features include an integrated text editor, automatic log-on routines and simultaneous display and printing.

And the price? Under \$100. No wonder thousands are already installed and working.

Just ask your computer dealer for all the details. Or call or write Jim Fitzgerald at MICROCOM, 1400A Providence Highway, Norwood, MA 02062. Tel. 617-762-9310.

BPS BUSINESS GRAPHICS™ for the IBM® PC

Seeing Answers Without Staring at Numbers.

***Discover what your data
really means.***

With BPS Business Graphics you can analyze your data better by charting it. You can see trends, compare performance to projections, and find patterns that print-outs often hide.

***Chart the data
you already have.***

You can graph data directly from the programs you already use, including VisiCalc®, SuperCalc®, Multiplan™, and dBase II®—even from word-processing documents and you won't have to retype a single number.

***See the answers
instantly.***

BPS Business Graphics quickly gives you professional-looking graphs in a wide variety of formats, so you can make colorful presentations on your monitor. And since the program works with more than forty popular printers and plotters, you can get high-quality paper copies of your graphs, and even overhead transparencies.

Business Graphics is a trademark and BPS is a registered trademark of Business & Professional Software, Inc.
IBM and VisiCalc are registered trademarks of International Business Machines Corporation and VisiCorp, respectively.
SuperCalc, Multiplan, and dBase II are trademarks of Sorcim Corporation, Microsoft Corporation, and Ashton Tate, respectively.

CIRCLE 157 ON READER SERVICE CARD

PC-Communiqués

A compendium of facts, news, opinions, gossip, inside intelligence, speculation, and forecasts about IBM Personal Computers.

had discovered the Software Centre to be a veritable Barbary Coast, a haven for program pirates.

The Software Centre has introduced a service called "Buy 'n Try," which allows a user to purchase a program, then receive an 80 percent refund if he returns the disks and manuals in good condition within 6 months. This arrangement might tempt

some consumers to borrow programs and make illegal copies of the disks—"Buy 'n Try" would make it awfully easy to do so for only 20 percent of the software's normal price.

Three software manufacturers—Bug Byte, Imagine, and Quicksilver—have threatened to withdraw their advertising from magazines that carry Software Centre ads, and may take legal action. Bug Byte refuses to supply the Software Centre with its products. These three urge other software producers to join their efforts to smash the new service.

The Software Centre might launch a countersuit charging these manufacturers with restraint of trade. Its manager, Don Malham, insists that the "Buy 'n Try" offer is aboveboard. "We're not doing anything that appears to be outside the law," he said. "We do our best to ensure that people don't copy software. We draw attention to copyright with a sign in the shop and we get people to sign a declaration on their order that they won't copy a program."

Unless legal decisions bring this service to a halt, other retailers are likely to imitate the Software Centre's success with software rental ventures. Either this practice will become as widespread and acceptable as renting out videotaped movies, or the Software Centre's slogan may turn into "Buy, Try, 'n Testify."

Fishing For Pirates

From the way some software producers have been rattling their legal swords, you'd think they

Programming For Health And Wealth

The Association for the Advancement of Health Education (AAHE) is sponsoring a contest for original software: programs designed for educational or management applications in schools, homes, clinics, hospitals, health organizations, or business and industry. Entries should be written in BASIC and ready to run on an IBM PC or any other widely used microcomputer. The program should emphasize interaction between the user and the computer.

The top prize will be a \$1,500 award. Winning entries will become the property of the AAHE, which will market the programs and pay royalties to the authors.

All entries must be received by November 1, 1983; winners will be announced in the spring of 1984. To receive a contest application packet, write to the Association for the Advancement of Health Education, Computer Software Contest, 1900 Association Drive, Reston, VA 22091.

PC-Communiqués Pays

Do you have news, gossip, or unusual computer tales for PC-Communiqués? We will pay up to \$50 for each submission used. You must include your name, address, and telephone number with the item. We will preserve your anonymity if you wish. All submissions become the property of PC and are subject to editing. Our User-to-User section also publishes and pays for readers' submissions; that section features tips, problem solutions, and short programs or routines. Please send submissions to the appropriate department—PC-Communiqués or User-to-User—at PC, One Park Ave., New York, NY 10016.

PC-Communiqués

Give Us This Day Our Daily Data

In the twister and tornado lands just below Austin, Texas, a small but hardy band of Catholic monks is aided in its worldly pursuits by three microcomputers.

The head monk at St. Benedict's, Brother George Gammons, said that he and his brother monks (one is a woman, by the way) use a transportable Osborne and two Jmsai desktop computers to keep track of the monastery's business ventures. These include managing a cattle herd and a small farm—typical vocations for monks as well as the region. The monastery has diversified further with a photography service and a book publishing company. Its first volume was titled *Your Friendly Neighborhood Monk*.

St. Benedict's Monastery in Welder, Texas is an independent, noncanonical Catholic organization. Though its trinity of computers has been a blessing in such secular tasks as generating mailing lists for book promotion and keeping records on the herd of cattle, Brother Gammons says that the monastery intends to upgrade by purchasing an IBM PC as soon as it can afford one.

With all the prayers coming morning, noon, and night from the sacred heart of Texas, perhaps somebody will hear them and lighten the brethren's toil with a PC. It might be a modern miracle.

New Chip, New Languages

IBM has finally provided the official answer to one of the worst-kept secrets of its PC and PC-XT motherboards: It has released the 8087 Math Co-processor, a chip to be installed in the vacant socket next to the computer's 8088 "brain."

IBM's 8087 option kit includes the co-processor and a "current-level" 8088 chip for a price of \$260. The replacement 8088 is required for early-model PCs that would otherwise be incompatible with the new device. The 8087 co-processor extends the repertoire of the 8088 to include advanced mathematical capabilities and increases the speed of floating point arithmetic, logarithmic, and trigonometric functions significantly—in some applications as much as tenfold.

Also announced in June was IBM's APL (A Programming Language), which can use the advanced capabilities of the 8087 chip for greater speed. APL was pioneered by IBM for its

mainframes and minicomputers. In addition to operating on the PC, APL is capable of exchanging workspaces and data files with an APL system on an IBM/370. The price for the language is \$195.

A version of LOGO, a high-level language that treats data as objects that can be easily manipulated through simple commands, was also announced by IBM for fourth-quarter release at \$175.

The Times Explains Micros

An article on portable computers, in a recent issue of the *New York Times*, explained memory size terminology with this helpful footnote: "In kilobits, 8k equals 8 kilobits." Thanks. That really clarifies the issue.

**"CHARLIE CHAPLIN
isn't promoting IBM's product.
He represents Everyman in his
struggle to achieve."**

Phillip Estridge
IBM Product Manager

Oscar's Guardians Look At Software Security

The next time the words "the envelope, please," are heard at Price Waterhouse, it may be to mail you a copy of a free booklet, *Minicomputers and Control*. In this short treatment, the accounting firm, best known for its participation in the annual Academy Awards ceremonies, warns users of small computer systems that they might overlook important issues of security and control.

"Increasing computerization brings with it the potential for error and fraud, unless management establishes appropriate safeguards," said S. James Gaston, a partner in the firm's Toronto office. A programmer might accidentally change a number, such as a discount rate, and cause thousands of dollars worth of incorrect invoices to be issued before the mistake is discovered. Or an employee might know enough about programming to instruct the company's check-writing program to issue him a \$20,000 check.

The booklet provides jargon-free answers to 30 questions that business managers have asked, and covers topics including passwords, segregation of duties, data recording and review, edit routines, data storage, and control totals.

While this guide is aimed at minicomputer users, it should also provide timely warnings to those planning to put the PC to work in multi-user business situations. Security and control methods tend to be even more neglected in the microcomputer field.

A free copy of *Minicomputers and Control* can be obtained at any of Price Waterhouse's 329 offices or by writing to Gerald M. Ward, Price Waterhouse, 1251 Avenue of the Americas, New York, NY 10020.

Pirate Games

A new French software house, Ediciel, has an unusual attitude toward program pirates: "If you can't beat them, then play games with them."

Ediciel is a joint venture of Matra, a high-technology group, and Hachette, France's largest publishing company. It produces business, educational, and game software for the IBM PC, Apple II, and TRS-80 III. By the end of this year Ediciel will introduce 25 products for the French-speaking market.

One of the programs in Ediciel's initial offering is an

arcade-type game, Nojo, which will be promoted with two contests. One prize will be awarded to the player who achieves the highest score with Nojo. The other prize is reserved for the first person who can break the disk's copy-protection scheme and present Ediciel with an illicit reproduction of its game.

Ediciel seems to accept software piracy as a fact of life in the computer business; it would rather "wink at the pirates" than fight. On the other hand, this manufacturer seems confident that its disk-protection method is clever enough to offer the pirates a challenge worthy of a prize.

Return of The Dream Book

Last fall, to celebrate the first birthday of IBM's Personal Computer, PC Magozine found that over 1,250 PC-compatible items had appeared in less than a year. Descriptions of all these products appeared in the fifth issue of PC.

Since last fall, even more products have been produced. Your demand for the latest, most complete information will by the end of August be satisfied by PC: The Product Directory.

This independent guide to products and services for the IBM PC and XT will include over 500 pages describing thousands of pieces of hardware and software, along with accessories, books, and other resources.

PC-Communications

Mental and Digital Cruelty

"Computer Named As Contestant In Divorce." The story behind this headline might seem too far-fetched to even be printed in the *Notional Enquirer*, but it's true. John Bear learned the sad details while researching his book *Computer Wimp* (to be published in August by Ten Speed Press).

Bear reports on a long-married California couple with two teenaged sons. A happy family, until the husband came home with an IBM PC. Over the subsequent 6 months he barred the rest of the household from using the machine and sequestered himself in the family room, night after night.

When his wife and sons tiptoed past his door, they heard "peculiar sounds." Perhaps the husband was playing games, but he vigorously denied such charges.

The wife's lot in this story is predictable, even if this may be the first "software opera" plot to emerge in the real world. "If it had only been another woman, I

could have competed," she might well lament.

At last report the couple had separated. In their impending, unamicable divorce proceedings, the seductive PC is expected to be named as a contestant.

What can be done to redeem the PC's seamy reputation as a homewrecker? Marriage counseling by modem, perhaps?

Wearable Software

Real PC users don't wear polyester. So say the entrepreneurs at The Next Event. They're coming at the PC market with a peripheral made of 100

percent natural fibers called *Wearable Software*—the first PC you can wear on your back.

This line of T-shirts, sweatshirts, polo shirts, sweaters, and other wearables, designed with fashion-conscious PCers in mind, will bear PC slogans and logos. These garments should be hot items by early fall, when a factory about 40 miles from Boca Raton begins producing them.

Although the company is new to the micro market, it was a logical next step for its staff, according to Jeff Max, vice president for marketing. "We've been computer buffs and bit heads for a long time," he said. "Our business is run on a PC, and it's helped us a great deal."

He first contacted the legal staff at IBM's Armonk headquarters. "Their response was that they only use the logo for IBM proprietary products. They thought it was a great idea, but 'not our policy,'" he said.

Max finally broke through with Gary Conrad, the director of marketing in Boca. "I sent him samples of items with the PC symbol imprinted, and he thought they were terrific."

What styles will *Wearable Software* design for the typical PC user—"A small to medium size business person, fashion conscious, and interested in good quality?" Max said. "Most of the products we'll tailor for PC will be 100 percent cotton or wool, as opposed to polyester blends. We're thinking about oxford button-down shirts, and ties are always possible."

To find out how to access this most peripheral of PC peripherals, write to *Wearable Software*, P.O. Box 781, Newport, RI 02840.

What's next, PC chadorians?

NEW EXCITEMENT FOR YOUR IBM® PC!

J-BIRD

It's new! A battle of quick reflexes and wit—not firepower.
Your goal is to change the color of your world. But first, you must maneuver around hordes of hazards: outjump King-Bo the snake, dodge mind-globes, outsmart Hob and Nob when they try to slow you, and pursue the time spheres in your world. It all makes for more fun than you've had in a long time!

Special features include: incredible graphics and sound; joystick or keyboard operation; two player option; on/off sound; joystick calibration; high scores saved on disk.
J-BIRD is written totally in machine language for beautiful, smooth animation. Multiple play levels make J-BIRD a game that everyone can enjoy. Requires color graphics adaptor & 48K RAM.

PC-MAN AND THE MICRO MONSTERS

Beautiful colors! Arcade quality graphics! Stunning resolution! Exciting music and sound! Need we say more!

Written entirely in machine language for smooth animation. Requires color graphics adaptor and 48K RAM.

WIN AN IBM® PC!

That's right! Send us your best game and enter the ORION SOFTWARE FUN FOR ALL Contest. We'll be giving away an IBM Personal Computer—and you could be a winner! Call or write to ORION for contest details today!

Software reproduction. Endless, perfect, accurately-repetitive software reproduction.

Concentrating our creative energies in that direction, Logic General has become synonymous with software duplication for software authors, publishers and distributors; equipment manufacturers; and companies in both the public and private sectors.

Combining years of experience as a leading distributor and

duplicator of magnetic media with the latest automated high-speed production equipment, Logic General can satisfy software duplication orders of literally any size and complexity.

We can tailor your order to cost, performance and system parameters with precision and flexibility. Most importantly, the accuracy, reliability and quality of each Logic General-duplicated diskette

is guaranteed, 100%.

High capacity. Prompt service. 100% verified duplication. All at a most competitive cost. For complete information, call Logic General. Where all software is re-created equal.

NOW, PAY LESS, AND GET GREAT SERVICE, TOO!

When you buy software from us you're in good company. You see, one of our favorite customers is IBM, itself.

That's right. When IBM PC headquarters in Boca Raton, Florida wants to try out some competitive products, they give us a call and place an order.

So do Hewlett-Packard and General Electric and Honeywell.

Frankly, we're flattered but not surprised. Because we know we've earned a national reputation for rock-bottom prices, fast, personal service,

and outstanding product support.

Now, we'd like to go to work for you.

TAKE A LOOK AT WHAT WE OFFER.

LOWEST PRICES: Compare prices for yourself. We think you'll be impressed. (Somebody at IBM must love a bargain!)

How do we keep prices so low? By buying in tremendous volume and negotiating the best deals. (We were the first mail-order house in the country to sell Perfect Writer!)

FAST DELIVERY: When you call 800-SOFTWARE you get the fastest delivery available anywhere.

Which means that every order is filled the day we get it. And that our unique Order Tracking System™ is on the job, keeping tabs on your order every step of the way.

Our giant inventory — one of the largest in the United States — also assures you of the fastest possible service. Everything's in stock so you don't have to wait.

TECHNICAL SUPPORT: It's the best. When IBM calls with a question, we better be ready! (One day, when IBM had a question, you'll be glad you bought from 800-SOFTWARE.)

CIRCLE 313 ON READER SERVICE CARD

CONSIDER THE OPTIONS...WE HAVE NINE.

Develop your PC's full potential.

So many other competitors have only four or five real features with their combination cards. But while the others were trying to count to higher numbers, we were designing real features into our card. Real features like a BSR X-10 AC line controller interface, game port, and program-mable 8 bit I/O and 4 bit output ports.

And, of course we have the normal features of 64K to 256K of memory with parity, serial interface (either COM1 or COM2), Centronics-compatible parallel interface (LPT1, LPT2, or LPT3), and Clock/Calendar with Battery backup. To top it off, we offer the print spooler and RAM disk software free of charge with purchase of the card.

Why Us?

Years of experience by our design staff in the industrial computer market have resulted in fifteen different computer cards used in process-control systems. Applications which demand the most from any piece of hardware. We believe you have the right to demand competence and expertise. Our card passes the test.

Zero to nine functions in 15 minutes.

Our installation documentation is in extreme detail, with pictures and explanation of how to install the board yourself. All you will need is a screwdriver. The board is completely silk-screened and solder masked. In

addition, a comprehensive burn-in program is undertaken on all cards to insure the highest measure of reliability.

Grow into this card as you grow into your computer.

The IBM compatible serial port, parallel port, and clock/calendar functions are powerful features. Add to that 64K to 256K of socketed (parity checked) memory and it's quite a combination. But it's at this point that we begin to shine. Like in a game port which supports the operation of two joysticks, or with the BSR X-10 AC Line Controller Interface which allows you to remotely control lights, appliances, or other AC line components with your IBM PC. There are no wires to cut or solder and the software is provided with the card. We think you can use this feature for a variety of purposes, including security and energy management. Add to that our Real World Interfaces (8 bit I/O and 4 bit Output ports) and you will be able to control discrete devices. So whether you have an application now or later, you can grow into this card as you grow into your computer.

The time is now.

For a limited time we are offering the card at \$100 off the list price. Our products are warranted for a full 12 months from date of purchase. Warranty repairs are made within 24 hours of receipt. Finally, if you are not completely satisfied after 30 days, we will

return the entire cost of your purchase + postage. It's an offer we don't think you can refuse.

\$100 OFF (LIMITED OFFER)

For a limited time you can receive all nine features for \$100 off the list price. Act quickly to receive this offer.

Dealer Inquiries Invited

Questions about Spinwriter problems, colors in dBase II, files on hard disks, and CALLing assembly language programs from BASIC are answered in this session with the PC Tutor.

PC Tutor

Finding the Fonts

Q: As part of my work, I have to use two type fonts in word processing. I would like to use both alphabets in WordStar, which only uses the first 128 characters on the ROM chip on the IBM monochrome adapter board. What is your advice on how to go about doing this?

Joshua Sommer
Palo Alto, California

A: The monochrome adapter card is not well suited to using multiple type fonts. Even though the character chip has room for additional character sets (as you know, it already has two sets on it), switching between sets requires a hardware modification.

It is truly amazing the number of questions I get asking about how to use the full 256 characters with WordStar. The best answer I can give is that although WordStar is an excellent text editor, it is just not designed for that sort of work. Perhaps you should investigate other word processing programs.

There are really two reasons for the inaccessibility of the additional 128 characters. First, the additional set of characters is unique to the IBM PC. As such, software and hardware manufacturers would sacrifice compatibility by making these special IBM characters accessible. Second, WordStar (and many other such programs), were originally designed for mi-

crocomputers that operated with CP/M-80, which only had 128 characters specified.

Mastering Macroassembler

Q: I have been doing all of my programming in BASICA and compiling the results when I need speed. I find that even more speed is needed to make laboratory use of my PC. Can you recommend a readable textbook on the IBM macroassembler package? Will the assembler speed up my code appreciably?

Sid Segalowitz
St. Catharines, Ontario, Canada

A: I know of no suitable books on the macroassembler. I have used the assembler extensively and, even as an experienced programmer, I found that the manual leaves a lot to be desired in readability. A new book has been announced, but I have not seen it yet, and so can offer no assurances as to its suitability.

Writing your code in assembler should improve speed by at least a factor of two. There are a few other approaches possible to make faster programs. You might wish to investigate programming in another

high-level language. I have found that the Lattice C compiler gives excellent results with remarkable speed. With it, linking assembler routines is quite easy.

One advantage of using another language is that BASIC routines often are slow due to the convolutions required by programming in a nonstructured language. For example, using a Pascal CASE or C language SWITCH statement can often save a lot of time when compared with the multiple IF/THEN/ELSE approach required by BASIC.

Unhappy Returns

Q: I have a PC with PC-DOS 1.1 and an NEC PC-8023 dot-matrix printer. I have run into one problem. If I set the DIP switch on the printer so that a carriage return does not generate a new line, then listings and printouts are fine; however, if I use Shift-PrtSc then everything prints out on one line. If I set the DIP switches for carriage return/line feed, then listings are always double-spaced, but Shift-PrtSc works fine. Is there any way this can be resolved?

Also, do you know of any software that provides graphics screen dump for the printer?

James Bettman
Chapel Hill, North Carolina

A: That is a strange problem indeed. I can't see why you'd be experiencing any

trouble with your printer. You should set it so that a carriage return does not generate a new line. This setting has worked flawlessly with every printer I have used (including a possibly different version of the NEC PC-8023), so perhaps your hardware is at fault. You might check your cable to ensure that the hardware handshaking signals are being transmitted.

As for graphics screen dump programs, the only routine I happen to know of that will work with the NEC is Frieze distributed by StarSide Engineering. I am the author of that package—hence my familiarity—there doubtlessly are others on the market equally as good.

Copy Protection

Q: I am interested in developing and creating software that will prevent a program from being copied. Briefly, how is this done?

David Kawe
Melbourne, Florida

A: What you are discussing is copy-protection. Although some popular games may deserve that treatment, I recommend, in general, that people avoid buying and producing copy-protected software. Users, obviously, can't make back-up copies to protect against those occasional occurrences. Copy-protection methods also cause problems in transferring programs to hard disks (this dilemma has come up more since the introduction of the IBM XT), and running with new operating systems and slightly non-standard hardware. These problems make it invariably an expensive proposition for the consumer to use copy-protected disks.

It has been said that the best possible software protection a manufacturer can provide is exquisite service and frequent updates with new features available only to licensed purchasers.

Exclusively BASIC?

Q: I recently purchased an IBM PC. During my research prior to the purchase I noticed that all of the software available for micros was written in BASIC. Other than BASIC being the micro's native language, why are there so few COBOL packages around?

Barry Silver
Machansville, Virginia

A: BASIC isn't used exclusively with microcomputers, but most program list-

ings (source code) you see are written in BASIC. Most of the software around is written in one of these languages: C, Pascal, compiled BASIC, and assembler. However, those languages are all compiled, so the end result is a machine lan-

WHY ARE there so few COBOL packages around?

guage program (an .EXE file). You can't see the source code to modify it, which prevents you from making up your own version for resale. Very few companies are willing to sell the source code to a software package, due to the possibility of theft.

There are two reasons you see only BASIC source code. First, these programs are written for the BASIC interpreter and must be provided in source code form. Second, much software is written by computer novices who are most familiar with BASIC. Hence, what ends up on the market is either a compiled program or BASIC source code.

As for COBOL, there are one or two packages that were originally written in COBOL for the PC, but again the end result is a machine language program, not a source code.

Spinning Both Ways

Q: Despite assurances from our computer store to the contrary, we have had difficulty using our NEC 7715 Spinwriter with the PC. When we used it with our original computer it did everything we asked for including boldfacing. Now, not only will it not boldface, but it refuses to print bidirectionally. Is there a way we can improve this situation? On repeated calls to NEC, IBM, and MicroPro we have come up empty.

Mark Eiseman
North Bay Shore, New York

A: I own an NEC 3550 printer and it does print bidirectionally, automatically. It will print unidirectionally when the buffer is not full enough, however. It may be that you are running at too slow a baud rate to fill the 7715 buffer (assuming you are using a serial interface), hence the unidi-

rectional printing. You might try increasing the baud rate and see if that helps. WordStar does have a way to do bidirectional printing, but my understanding was that this would cause alternate lines to print backwards on a 7700 series Spinwriter.

As for boldfacing, this is a feature enabled by software. Since you mentioned MicroPro, I must assume you mean that your WordStar is not performing the boldface correctly. The simplest solution to the problem is to define two of the user features (USR1 and USR2) to turn the boldfacing on and off. Then, preceding a string with a Ctrl-Q will turn on boldface and ending the string with Ctrl-W will turn it back off. With version 3.20 of WordStar, the locations in question are 77F and 784 hexadecimal. I would use the outshowdow feature which on the 3550 is enabled by the Esc key followed by G, and disabled by Esc H. You would key in the following underscored material in response to prompts

```
A>DEBUG WS.COM
-E77F 2 1B 'G'
-E784 2 1B 'H'
-1
Writing . . . bytes
-Q
A>
```

The second and third lines each will tell WordStar to send two characters: the Escape and G or H.

If you are using a different version of WordStar, then you will need to contact your dealer, who should be able to help.

Hard Limits

Q: What is the maximum number of files that you can have on a hard disk drive, with or without a removable cartridge?

Nassos Kitsios
Alexandria, Virginia

A: Before version 2.0 of PC-DOS, there was no answer to this question, as version 1.1 did not support hard disks at all. With version 2.0, the answer is that the limit is determined by the format of the disk, which is specified in software.

The standard value, I believe, for the IBM XT is 512 files. This is the only number of files in the root directory, however. By using subdirectories, you can increase the number of files to the point of no return.

BASF QUALIMETRIC™ A TOTALLY NEW DIMENSION OF QUALITY.

From BASF comes a totally new level of excellence in magnetic media—the Qualimetric standard, a standard so advanced that BASF FlexyDisks® are confidently backed by an extraordinary new lifetime warranty. The Qualimetric standard is maintained without compromise through every step of BASF design, production, inspection, and testing...reflecting an unwavering BASF commitment to media fidelity and durability.*

*Our FlexyDisk jacket incorporates a unique two-piece liner that not only traps damaging debris away from the media surface, but also ensures precise media-to-head alignment. The result—certified 100% error-free performance, backed by BASF's exclusive lifetime warranty.**

For information security, tomorrow and beyond, look for the distinctive BASF package with the Qualimetric seal. Call 800-343-4600 for the name of your nearest supplier.

Coloring dBase

Q: An article on "Kaleidoscope" (PC Magazine, Volume 1 Number 10) included a section telling how to obtain color graphics from Assembler and BASIC programs. I am interested in using color graphics in dBase II programs, if possible. Is there any way to turn colors on or off, and control screen intensity from within dBase II?

William Silverman
Washington, D.C.

A: If you have PC-DOS 2.0, then you can turn colors on and off. To use this feature, you need to enable the ANSISYS program. This is done by putting the ANSISYS file on your boot disk, and then creating a file called CONFIG.SYS that contains a line reading `DEVICE=ANSISYS`. If you use any of the other options of PC-DOS 2.0, such as buffering, they can also be included as lines in the CONFIG.SYS file.

When you boot up the PC, the ANSISYS file will be loaded into memory. To use color, you now need to send on Escape sequence to the console. Refer to page 13-8 of your PC-DOS 2.0 manual for a discussion of which codes will generate

which colors. For example, pressing the Esc key followed by [7m will start a display in Inverse video.

Thus, you would use the command `? chr(27)+"[7m"` to enter inverse-video mode, or perhaps `?chr(27)+"[33m"` to get a yellow foreground. Line graphics are another matter entirely. I doubt that dBase II is capable of such.

Disabled Break

Q: Can you tell me how to disable the Ctrl-Break function like some software packages do? I would like the computer to beep when someone attempts to break.

Ali Dabiri
Montgomery, West Virginia

A: When a PC-DOS program (other than BASIC) is run, the Ctrl-Break function runs to a software routine: interrupt 23. When someone hits the Ctrl-Break sequence, the computer goes to a location in memory governed by the contents of a double-word (4 bytes) pointer in memory corresponding to the interrupt 23 hexadecimal value. These four bytes are located at 0000:008C hex. The first two bytes are the offset address of the subroutine

call. The second two bytes are the segment address of the subroutine call. Just change that pointer to another value (i.e. to point to a subroutine that beeps).

Refer to page D-3 of the PC-DOS 2.0 manual since, unfortunately, any more explanation is beyond the scope of this column.

With BASIC 2.0 you should use an ON KEY sequence to trap a Ctrl-Break. This would be done via the following code:

```
10 REM Assign Ctrl-Break to key
15
20 KEY 15, CHR$(4)+CHR$(70)
30 ON KEY (15) GOSUB 1000
40 KEY (15) ON
```

1000 BEEP : RETURN

Counting Parameters

Q: I use the CALL instruction of BASIC frequently for machine control applications. Unfortunately, when I CALL a subroutine that expects three parameters and I only give it two parameters, the end result is that the stack gets messed up and my machine dies. Is there any way to avoid having this happen every time? Perhaps there's a way to find out how many arguments were given to the CALL instruction?

James Peterson
San Jose, California

A: There are at least two possible solutions to your problem. The simplest way is to use a string argument to your calls. I would suggest using something like the approach in Figure 1.

In this example, the XFER program would take the first argument as the offset address of the subroutine to be called. Then have XFER translate the second argument, which will be a string, into a series of numeric arguments. (Refer to the BASIC manual on CALL conventions to see how to read a string.)

When XFER has finished translating from string to numeric, it can push the numeric arguments onto the stack and then call SUBRT from assembly code. Now, SUBRT does not need to pop the stack (via a RET n), since XFER can do it, as in Figure 2.

Taking COMMAND

Q: I would like to call COMMAND.COM from within a program to perform some PC-DOS type of operations or perhaps run

Figure 1: Method of using string arguments for calls in BASIC.

```
10 REM Assume SUBRT is your machine language routine
20 REM Assume your arguments are A, B, and C
30 REM Assume XFER exists, as described below
40 ARG$ = STR$(A) + " " + STR$(B) + " " + STR$(C)
50 CALL XFER(SUBRT, ARG$)
```

Figure 2: An assembly language routine using XFER.

```
;leave enough room for maximum number of arguments
ARG1 dw ? ;argument 1
ARG2 dw ?
ARG3 dw ?
XFER push BP ;save base pointer
; mov BP,SP
;perform the translation, saving into ARG1, ARG2, ...
;
;now set up for the called routine
push CS:[ARG1]
push CS:[ARG2]
push CS:[ARG3] ;and so on
mov DI,[BP+8] ;get the subroutine address pointer
call [DI] ;don't alter the BP
;now restore the stack
mov SP,BP
pop BP
ret 4 ;always two arguments to XFER
```

TURBOFILE: SUPERCHARGED ACCESS TO VISIFILE™

You know and we know that VisiFile is probably the finest data base management system on the market today. We wrote and designed it to be.

But somebody asked us, "Can't you help us access our files and information in special ways... for our special needs?"

So we designed TurboFile. It offers you customized access, by letting you write BASIC programs that can read and write VisiFile files. For example, TurboFile allows you to access up to ten files simultaneously. Quickly and easily, by full key, partial key, or record number (that's *real* cross-referencing access). Using the BTree indexes already built and used by VisiFile.

Unlike other DBMS systems, TurboFile uses the same data files as VisiFile. What that means is that along with all of the powerful and friendly capabilities of VisiFile, you add TurboFile's unlimited programmability.

The best part is that TurboFile is so easy to use. As easy as saying GET, REPLACE, ADD, DELETE, or UNDELETE. TurboFile adds about 15 extra statements to BASIC for a host of special functions. At the same time, it removes the complications of BASIC programming.

This is one DBMS that is going to make you a lot more powerful. Because in the world of the microcomputer user, **access is power.** And TurboFile gives you access.

TurboFile is currently available for the IBM Personal Computer, and is priced at \$195. For additional information call Creative Computer Applications, Inc. (603) 888-6648, or write PO Box 7074, Nashua, NH 03060. We're the ones who wrote VisiFile.

VISA and MASTERCARD accepted.

TURBOFILE

Software Dynamics, Inc.
Introduces ...

SDI-3780

An IBM
3780 Terminal
Emulator for the
IBM Personal Computer.

MAJOR FEATURES:

- Emulates all features and functions of the IBM 3780 RJE Workstation with the exception of Home Mode and On-line Test Mode.
- Supports both point-to-point and multipoint data link procedures.
- Requires only a basic 64K machine to operate.
- Compatible with the IBM BISYNC communications adapter, the AST CC-232/332 adapters and other adapters as they become available.
- Line speeds up to 9600 bits per second.
- Talks standard 3780 to your host computer, your IBM 3780 terminal or your IBM 3780 compatible terminal.
- A special mode allows transparent file transfer between the IBM PC, the DEC Rainbow 100, the CDI DOT and other SDI-3780 compatible terminals as they become available.

ABOUT SOFTWARE DYNAMICS, INC.

At Software Dynamics, communications is our only business.

We're hardly new at it with over 15 years of experience authoring IBM terminal emulators. We've authored 3780 emulators for the DEC Rainbow 100, the Lanier EZ-1, the CDI DOT and the ICL 1500 to name a few. You may have seen us in the CDI booth at the Spring NCC show.

IBM is a trademark of International Business Machines
DEC and Rainbow 100 are trademarks of Digital
Equipment Corporation
CDI and DOT are trademarks of Computer Devices Inc.
EZ-1 is a trademark of Lanier Business Products
ICL is a trademark of International Computers Limited

Software Dynamics Incorporated of Florida

CIRCLE 390 ON READER SERVICE CARD

a program. Despite claims to the contrary, PC-DOS 2.0 does not seem to make this very simple. Can you suggest a way to do this?

Phelps Gates
Chapel Hill, North Carolina

A: The first thing you need to do is de-allocate some memory so that PC-DOS has room to maneuver in. When a program is first loaded by PC-DOS 2.0, all available memory is allocated to it. Suppose you really only need 64K (or 1000hex paragraphs—a paragraph is 16 bytes). To de-allocate the rest of memory you would set ES to the value of the program segment prefix, set BX to 1000h, and then perform a PC-DOS SETBLOCK call (call 4A). Now ES+BX is the segment value of where to start loading COMMAND.COM.

Then, set up a command line containing the instructions you wish COMMAND.COM to perform, preceded by a C: see pages 10-9 of the PC-DOS 2.0 manual and note that the first byte of the command line contains the command line length. Now set up the pointers as defined on page D-45 of your PC-DOS 2.0 manual. Then Execute COMMAND.COM (see call 4B on page D-44).

For example, the string C DIR B: will give you a directory of the files on B. As a means of testing this out, you can use the DEBUG program, like this:

```
A>DEBUG COMMAND.COM  
-N C DIR B:  
-G
```

The second line sets up the command line; entering the third line runs COMMAND.

Correction

A few months ago I stated that EasyWriter was incapable of working with a RAM-disk program thanks to it not using PC-DOS. It turns out that there are four versions of EasyWriter around. Two of these (EasyWriter 1.1, and a new version of EasyWriter II) do use PC-DOS and are compatible with RAM-disk programs and hard disks. Sorry for the confusion.

The PC Tutor solves practical problems and explores points of general interest. If you'd like to see your questions answered here, drop a line to PC Tutor, PC Magazine, One Park Avenue, New York, NY 10016. /PC

BEYOND THE DREAM

Imagine creation . . . Imagine the power . . .

Imagine 3D

The first and only full featured Graphics Design System available for microcomputers.

With Tritek's 3Design,
within minutes, you can:

- ! Create your own 3-D structures
- ! Rotate, move, and scale them independently or in groups in any coordinate system
- ! Produce presentation quality output

Features

- ! The most advanced hidden line removal anywhere (an extended NASA algorithm)
- ! The most advanced graphics relational database available
- ! Clipping, zooming, panning
- ! Objects can be changed at any time with the friendliest graphics EDITOR you have ever used (functions such as rubber line, point matching, gridding and many others are provided)
- ! 3Design is fully menu driven with an ever-present HELP feature, so you can start using the complete system within hours
- ! ARTISTE presentation package allows color mixing, shading and text with a standard display
- ! Structures can be saved and retrieved from disk files at any time
- ! Structures can be defined by three-dimensional functions (i.e. $Z = X * Y$)
- ! Optional hard-copy output capability with most printers (full color with IDS PRISM*) with the I-C Magic* chip
- ! You are even protected against power failure. 3Design creates constant back-ups
- ! Coming soon—Optional Wordstar* interface will let you intermix figures and text

AND THE BEST FEATURE OF ALL:

An introductory price of ONLY \$199 (includes all the software described above plus utility programs, documentation and sample structures).

\$199

\$249 with an I-C Magic

Minimum system configuration—64KB, color card, 1-320 KB or 2-160 KB disk drives.

For information on orders for 3Design,

Envision a single high-speed communications board with integrated, easy-to-use software that emulates any terminal.

It's not just your imagination. It's Linkup.™

At ITI, we know your data communications must be fast, accurate and inexpensive. Our engineers faced the same communications problems you face. That's why they designed Linkup™ for the IBM PC.

With Linkup, you have a high-speed, programmable communications processor integrated with user-oriented software that provides cost effective access to an international network of host computers, terminals and other personal computers. You'll be able to transfer text, graphics, facsimile images, telemetry and program files as easily as dialing a phone number.

Communication modes support high and low speed access to computing and data base services, electronic mail, order entry, credit verification, tele-conferencing and direct marketing. **Linkup is the only communications hardware you'll ever need.**

A single plug-in hardware module with the standard software emulates TTY, ASCII block mode, IBM 3101, IBM 2780/3780, DEC VT 52/100 and Tektronix. IBM 3270 and 5250 are scheduled for mid-year introduction. Terminal emulation modes are changed by a single keystroke without changing diskettes and switching modem cables to different hardware interfaces. And most importantly, the same familiar user command set appears in all modes.

Linkup grows to meet your changing needs.

Future terminal protocol emulation software will integrate into our programmable hardware controller. And, Linkup's high-speed data throughput will allow you to take full advantage of increases in common carrier transmission line speeds with no modification. Linkup is available for users and systems developers who wish to integrate our com-

munications capability into their unique systems, on a select OEM basis.

Linkup is cost-effective.

Linkup's single communications board does more than several others combined, leaving your computer's precious board slots open for further applications. And its powerful MC 6809 co-processor chip handles all communications tasks, freeing the PC to service the user interface.

Faster, more accurate transmission means lower costs.

Linkup's integrated design architecture reduces connect charges by transmitting and receiving data at speeds up to 19.2 Kilobaud asynchronous and up to 56 Kilobits per second synchronous without the loss of data throughput normally associated with such speeds. Reduce file storage charges on a remote computer system by transferring the file at high speed to the PC's disk, then print off-line.

Linkup utilizes block error control.

The module checks each line for error as it's received, retransmitting only those lines in error, instead of entire pages. That saves connect time and character transmission charges.

Our innovative fill-in-the-blanks technique overcomes the tedium of question-answer interrogation and menu approaches.

The user simply enters phone numbers, passwords and job file

names on a consistent fill-in-the-blanks form. Communication options and commands are displayed on the screen form and selected with a single keystroke. The user is not forced through a series of lengthy menus just to change a single item.

Linkup works around the clock so you don't have to.

Linkup automatically executes tasks. It dials, signs-on, runs a job unsupervised and maintains a log of its activities. Unattended operation at night, on weekends and on holidays provides the lowest rates from both common carrier and computer services. It uploads, downloads and does printouts while you're away. And when you return, your data is ready and waiting, so you can put your time to its best use.

If you want to communicate, call ITI toll-free 800-431-3460 for additional information.

Linkup Specifications

Speed:

Continuous throughput of 56 Kbps Synchronous, 19.2 Kbps Asynchronous

Terminal Emulation Modes:

TTY, ASCII Block Transfer, DEC VT 52/100, IBM 3101, IBM 2780/3780, and future options include 3270, 5250, Tektronix.

File Types:

ASCII, EBCDIC and Binary with enhanced user commands, e.g. SEND, RECEIVE, APPEND, EXAMINE

Automatic Modes:

Dialup, Log-on, Job Execution, Answer, Alert, Unattended Job Scheduling, File Upload/Download and print.

Communications Interface:

Dual channel RS232C/423 compatible.

Modems:

103, 212, 201, 208 Bell compatible, Hayes, Vadic, Rixon and Omnitrac smart modems, or user defined

Bus Interface:

IBM PC bus compatible

PC Configuration:

PC DOS, 64 Kbytes RAM, 160 KB Floppy, monochrome display minimum. Also supports IBM compatible hard disks, color displays and printers.

Options:

Printz™ Print Spooler
Postmaster™ Electronic Mail
Audit™ Billing Summary

Base Price:

\$795 each, including TTY and ASCII block software

A Million Bytes for Your IBM PC

RAMPLUS™ with Memory Mapping

To keep pace with new software and your increasing need for more user memory, we designed the RAMPLUS™ multi-function memory board to accept either the 64K RAM chips or the new 256K RAM. When the 256K RAM chips arrive, you'll be ready with RAMPLUS.™

Also, our exclusive Memory Mapping feature solves the problem of reserved memory space in the IBM PC and allows you to use a full 1 megabyte of RAM on one circuit board. We'll be glad to explain our Memory Mapping feature in more detail. Ask for Technical Note No. 2871-1.

See your dealer for orders and information about RAMPLUS and our other PC Computer Components - Combiboard™, Floremem™, Digiboard™, Digiquad™, and Dynadisk™.

RAMPLUS™ Multifunctions

- 64K-256K expansion memory (expandable to 1 megabyte with 256K chips)
- Serial port - RS-232 compatible
- Parallel printer port - IBM hardware and software compatible
- Clock/calendar with battery backup

Dealers and distributors call VITEK toll-free, (800) 237-3443. In California, call (800) 237-7290.

SUPER I/O

SUPER RIO

Async Port #2

Game Port

RIO PLUS

What you get out of your IBM PC/XT depends on what you put into it.

The versatile multi-function boards from STB offer more functions and more memory.

If your personal computing applications have outgrown your personal computer's hardware, there's a smart way of expanding your system while still leaving plenty of room to grow.

The secret is the line of multi-function boards from STB.

Our SUPER RIO™ combines two asynchronous RS-232-C serial communication ports for interfacing modems, serial printers, plotters, mice, and an almost limitless list of other peripherals, a parallel I/O port for interfacing printers and hard disk controllers, a battery operated clock/calendar that remembers the date and time even when your system is turned off, a game paddle port that can use either APPLE™ or IBM™ compatible joysticks, and up to 256K of additional memory.

The STB Piggyback™ board adds up to 512K more memory onto the SUPER RIO for a total of 768K. And the pair uses only one expansion slot.

Included free with the SUPER RIO board is the PC Accelerator™, which combines printer buffering and high speed disk emulation into one easy to use program.

Our RIO PLUS™ board includes all of the I/O functions of the SUPER RIO (less one serial port) with on board memory expansion capability of up to 384K. When used with a 256K computer, this board gives your system a full 640K of memory. Of course, PC Accelerator is also included with every RIO PLUS.

If you already have enough memory, the STB SUPER I/O™ board adds a parallel I/O port, serial port, game port, clock/calendar and PC Accelerator to your system. And, it's small enough to fit in a short slot on the XT.

As new functions and applications arise, you can count on STB Systems to provide convenient, affordable ways to adapt these innovations to your system.

Compare our quality products at your local dealer, or for more information please write or call us.

The Memory Board: Expandable from 64KB for \$245 to 256KB for \$545.

The IDEAboard: Multifunction combination board. Memory up to 256KB. Options include serial interface, parallel interface, printer or SASI hard disk and/or clock/calendar with battery backup. Prices range from \$320 for 64KB with 1 option to \$695 for 256KB with 3 options. All prices include RAMFLOPPY disk emulation software.

Five better ideas from IDE for expanding your IBM PC.

We think the IBM Personal Computer is the best on the market. That's why we've concentrated our efforts on making add-ons strictly for the IBM PC.

We have ideas that can make your IBM PC even better. And more affordable.

Granted, those are ambitious goals. Goals that take quite a bit of imagination – and nerve – to reach.

And at IDE, we think we have the ideas it takes.

Better Idea No. 1: Innovative products.

We're leaders, not followers. IDE was first with a Combination

Board for the IBM PC that includes a Winchester disk drive interface. On the board itself.

We were the first to let you cable both serial *and* parallel interfaces from the back of the board. Without any troublesome jury rigging, without wasting expansion slots, and with the unit's protective cover in place.

And the innovations don't stop there. Removable Winchester disk drives. Expandable memory boards. Printer spooler software. Disk emulation software. A broad array of products...with still more to come.

IDE Dealers: Alaska: VPM Electronics, Fairbanks □ Arizona: Abbot Data Products, Glendale; Computer Emporium, Tucson □ California: Q-Bits, Mountain View; Microhelp, El Cajon; Stoneware Ltd., La Jolla; Precision Design Corp., San Diego □ Connecticut: The Computer Establishment, Old Saybrook; Microlog, Danbury; American Business Computers, Groton; Creative Systems, E. Granby □ Iowa: ComputerLand, Des Moines □ Kansas: CompulType, Manhattan □ Massachusetts: Arby Corporation, Cambridge; TSK Microsystems, Boston; MTS Microproducts, Arlington □ Michigan: The Computer Workshop, Houghton; Trans/National Corp., Troy □ Minnesota: Computer Depot/Divina Computer Center, Minneapolis, St. Paul; Burnsville Center, Edgemoor; Roseville, Southdale □ Nebraska: ComputerLand, Lincoln; ComputerLand, Omaha □ New Hampshire: Software

The IDEAdisk: Winchester disk drives, in-chassis or self-contained external mount, fixed or removable cartridge. From \$1450 to \$2000.
Special offer: 10MB (5 + 5) external mount from \$2600 to \$3000.

IDEAware: Printer Spooler software: \$50.

RAMFLOPPY disk emulation software: \$99

Better Idea No. 2: One year warranty.

We believe in the quality of our products. We buy only burnt-in components; we do extensive burn-in ourselves; and we customize final testing to match customers' configurations.

That's why we offer a full year warranty with all IDE products. 365 days. Not 90.

And we back it up with full software support and diagnostics, including software updates as necessary.

Better Idea No. 3: Unique upgrade policy.

When you buy any IDE product, you buy only the options you want. So you never have to pay for something you don't need.

Then you can add extras as you need them.

Take our boards, for example. For one year, you can trade up a board for one with more memory and/or options for the price differential plus \$25. In fact, you can trade up any IDE product for anything else in our product line the same way.

And that's unique.

Better Idea No. 4: Service that really delivers.

Our products are available through IDE dealers and representatives around the country. And our network is growing quickly.

We offer free installation in the metropolitan areas listed below, and our retailers will install any of our products for you right in the store.

If you'd rather do it yourself, we provide every IDE product

with all the documentation you need to perform the installation yourself. In minutes.

Better Idea No. 5: High value; low price.

Since our products are made strictly for the IBM PC, we can concentrate our efforts. Run our company more efficiently. And keep costs down.

But keeping costs down isn't enough for us. We pursue an aggressive pricing policy, too. Because we believe that by selling more add-ons at lower prices, we will become a leader in the industry. Our ideas will see to that.

You'll find all of IDE's better ideas on display at the fine retailers shown below.

If you don't see one for your area, call us toll-free. The list is growing all the time, and we'll give you the name of a dealer near you. Or take your order directly by phone.

And remember: when you think of expanding your IBM PC, think of IDE first. We have five great ideas for you.

Innovative Accessories

To Organize and Protect

We manufacture a complete line. Each product carefully engineered to solve your work space problems. Designed to be the ultimate in both function and appearance. Truly innovative accessories that just can't be overlooked.

KEYBOARD Cover
Model #KC210

\$12.00

Protect your computer keyboard with our dustcover made from rigid smoked bronze plastic. A low slhouette design that fits keyboards with a key working area of 16 1/2" (w) x 4 1/2" (d), such as the IBM PC and the T1620.

DISK DRIVE Cover
Model #DC310

\$10.00

A custom design cover to protect the IBM PC disk drive area from dust and dirt. Molded in black plastic to match the IBM Contemporary styling. The vinyl foam seal around its perimeter prevents harmful elements from entering the disk drive area.

ROLLTOP 100 Disk File
Model #RT100

\$36.00

Nothing to flip or store with this smoked, clear ROLLTOP cover. Twice the capacity (100 - 5 1/4" disks) of the leading "flip top" file. But it takes no more desk space! An outstanding design that combines contemporary styling with the elegance of a rolltop enclosure and a textured gray plastic body. It includes 10 diskette dividers and anti-skid feet. Locking Model #RT100L - \$46.00.

SYSTEM SUPPORT Platform Drawer
Model #SS610

\$89.00

System & CRT are supported by baked enamel, reinforced 20 gauge steel platform 3 1/2" (h) x 22" (w) x 15 1/2" (d). The cantilever drawer, supported by ball bearing slides, holds a Keyboard up to 2 1/4" (h) x 19 1/4" (w) x 9 1/2" (d), and extends to a lock position. The fully extended drawer becomes an 11" work platform with a wrist pad. Easy access to disk drive. The perfect solution to desks, credenzos, and typewriter return locations as narrow as 16".

Add additional \$2.00 for shipping/handling to charges shown below.

PRINTER STAND
Model #PS920

\$30.00

Elevates printer for smooth paper feed and storage.

- Baked enamel, reinforced 20 gauge steel platform
- Felt pads reduce noise and vibration
- Supports up to 100 lbs. . . without "bowing"
- Model #PS920 (shown) 5 1/2" (h) x 21 1/2" (w) x 13" (d) for paper 14 1/4" wide
- Model #PS910 is 5 1/2" (h) x 15" (w) x 13" (d) for paper 8 1/2" wide - \$25.00

It's a jungle out there.

Star's new software systems can improve your odds in the struggle for survival.

Recently, we did something very rare in the software industry.

We listened to what distributors, retailers and hardware manufacturers had to say about the confusing tangle of misinformation facing them. Not to mention the poor consumer.

And we responded. By completely revising some of our most popular software systems. To make them even more popular. And even easier to sell.

The Enhanced Star Integrated Accounting System. We've made many changes to our best selling system. Including the ability to handle all the new payroll deductions. Departmentalized sales analysis and purchasing analysis. Plus adding the facility to handle an unlimited number of General Ledger accounts. And a lot more.

The Star Legal Billing System. Revised to accept both CP/M-86** and MS DOS*** compatible hardware—plus CP/M*, MP/M* and PC DOS*** systems.

The Star Property Management System. Now revised to even handle commercial property.

The Accounting Partner*. A complete accounting system, specially designed for businesses with sales up to \$5 million*.

To make our C Basic software systems even more popular with consumers, we designed them fully compiled. Easy for both people and machines to understand. And compatible with both 8-bit and 16-bit micros to work with more of the machines on the market.

We even designed a whole new package for software dealers and distributors. With totally new documentation and demonstration programs. New self-training guides and sales support materials. Superior end-user support agreements. And a brand new pricing and credit policy.

For the full story, call Star Software Systems.

And improve your odds of making it in the jungle.

You Are Now Entering . . .

Remember when computers were huge tubular infernos that kept their logical cool only in speckless, refrigerated rooms? Most people (aside from white-robed technicians) found it easy to pretend that computers were far away, part of an alien world—their presence revealed only through such signs as small rectangular holes in pieces of the daily mail.

Computers have adjusted well to our environment and our way of life—and are prepared to assume a large role. The time is now. The place is anywhere. So come with us, if you will, as we explore the depths of databasezero.

. . . The Computer Zone

About The Creator Of Databasezero

Michael Longacre, who traces his talent to his great-great-great-grandfather, the designer of the Indian head penny, is the architect of "Surreal Hotel," a monthly cartoon that appears in *Details* magazine. His prose and illustrations appear in the *Village Voice* regularly. Longacre's paintings and drawings hang in the Los Angeles County Museum of Fine Arts and the Dallas Museum of Fine Arts. His published writings include two articles on the history of the impact of bicycles on fashion, and he has served as art director of *Home Video* magazine and the *Soho Weekly News*.

Longacre, who was a starving artist for 10 years, has never been a longshoreman, elevator operator, or taxi driver. He is currently working on a parody of *Ploypore* magazine (called *Ploypore*), to be published this fall by the American Parody and Travesty Corp. He is also the part-time single parent of "someone fabulous" named Vanessa.

DATABASEZERO™

THE COMPUTER ZONE

Florian Binary thought he'd get modern and join the computer age. After all, he reasoned, it was time to move up from his digital watch (which he'd mastered two years earlier). A visit to his local "Computer Zone" store confused him a bit. The lone salesman, when asked if the computer in the window could balance a checkbook, looked up from his "Flipper Ball" game and answered, "Only if your floppy interfaces with your modem — but you need a mouse. Dos two?" Further questions elicited the same answer: "Five thou, Jack."

Attempting to digest this information later in the evening, Florian was delighted to notice a television commercial for "the Vegemation III — a computer so powerful it never needs winding." The miracle of 800 dialing brought Florian into the computer age two days (and \$149.99) later.

He's not sure if it's him or the Vegemation, but so far he's only been able to make pie charts from his bank balance. Mrs. Binary, however, is thrilled with the "prompt order bonus gift," a combination ginsu knife and digital watch.

dBASE II™ made Graphic!

dGRAPH

The "ONE-STEP" graphics system for dBASE II™

Introducing the world's first and only database graphics system! And you don't have to know how to program to use it. With dGRAPH, the "ONE-STEP" graphic system from Fox & Geller, you simply choose the graph and pick the data. dGRAPH does the rest.

THE AUTOGRAPH ADVANTAGE Other graphic packages require you to tell them what to do every step of the way. But dGRAPH's AUTOGRAPH does all the work for you...automatically. So all you have to do is *ask and ye shall receive*. That means you get professional results even if you've never used a computer before.

Because dGRAPH automatically loads your dBASE II data, computes scales, draws grid lines and labels graphs. Not to mention advanced features like automatic shading, overlay graphs and combination pie-bar charts. There's even an automatic zoom feature.

POWER TO SPARE And dGRAPH is as powerful as it is easy. With data manipulation features like the ability to graph the difference between two fields. Functions to graph averages and percentages. And a calendar feature that lets you graph the same data by day, month, or year. Imagine, teaching your dBASE II to draw sales by month, expenses by division, this year versus last. The possibilities are as endless as your imagination.

BAR, LINE, PIE So don't just read about that dramatic jump in sales. See it on a bar graph! With dGRAPH you can "slice-up" next year's budget on a pie chart or track the upward curve of your favorite stock with a line graph. dGRAPH will totally dimensionalize almost anything you do with four types of graphs...all at the push of a button.

Call us at (201) 794-8883

dGRAPH by Fox & Geller. Positively the most exciting, completely automatic graphics system ever!

Ask your dealer for more information on dGRAPH and all the exciting new products from Fox & Geller or CALL US AT (201) 794-8883

The author decides to buy a computer. Quite unexpectedly, he receives a check for \$5,000 from an unknown benefactor. There is only one stipulation on spending the money . . .

Beginner's Luck For The Computer Virgin

When Sarah saw John laughing with the tattooed man, it suddenly all made sense. John, the man she had fallen in love with, the man she wanted to marry, was also the man she had been risking her life to discover. John was the killer.

It was a decent ending to the mystery, which just needed a few more scenes where he threatens her, she escapes, and turns him in. And then the final chapter in which she learns to live with the heart-break of having loved a man who turned out to be a ruthless, cold-blooded killer. I knew my book was nearly complete, and with a sense of accomplishment, idly flipped through the early pages. That's when the trouble started.

It didn't seem possible, but throughout the first six chapters, my heroine's name was "Sera." How in the world had she picked up an h at the end of her name for the last 200 pages? With a sense of foreboding, I began to read the earlier sections more carefully. The tattooed man had a bird-fish design on his left arm. Somehow

it had migrated to his right arm by the time he threatened Sara (Sereh?) on page 178.

There was John, his blue eyes shining at her when they first met, his green eyes

could only hope that typos, changes, new ideas, etc., wouldn't double that amount. My sense of accomplishment became a sense of frustration.

If I was going to spend all these hours in the future writing books, perhaps it was time to buy a word processor. But, how could I ever afford one?

MY COURSE
was clear. It was time
to buy a word
processor.

staring deeply into hers when they made love. My heroine may have been a great detective, but it was pretty evident that I, the author, had failed to notice some rather curious details.

With a sigh, I considered the options. No matter how I sliced it, it still came out to retyping over 280 pages. Even then I

Good morning, Mr. Kennedy. My name is Corey Sondler. I represent a very wealthy publishing company. I have here a cashier's check for \$5,000 made out in your name.

You may use this money for any purpose you desire—as long as it's to purchase an IBM Personal Computer—on these conditions: You must never tell anyone (including your family, dealers, or salespeople) where you got the money, and you must agree never to try and discover the identity of your benefactor.

First of all, you should know that I have absolutely no affinity for either science or machinery, and computers seemed to me to be a diabolical amalgam-

I HAVE
*absolutely no affinity
for either science or
machinery, and
computers seemed to me
to be a diabolical
amalgamation of both.*

tion of both. In high school, I was always intimidated by the tall, awkward boy (there's one in every class) who could compute logarithms in seconds and who sneered at you when you asked him to teach you how to use the damned slide rule. Now that gawk is making a six figure salary in Silicon Valley, of course, while I try to convince bored publishers to look at yet one more manuscript featuring a courageous woman detective.

It was only by convincing myself that I was just buying an elaborate arcade game with a typewriter attached that I could even consider how I'd actually deal with "computer people," all of whom I suspected of being former logarithm whiz kids. It was also necessary to admit to myself (and, eventually, them) that I knew next to nothing about these machines.

Welcome to ComputerLand

It may have been difficult for me to admit it, but it sure was easy for the sales people to accept my confession. "Nothing personal, but you're what we call 'Computer Illiterate,'" said the first salesman I spoke with. Nothing personal, indeed!

I would have told him off, but I was unsure of the language he spoke. I had figured enough of it out to know that his comment was not exactly user-friendly, but I had not yet decided if I was being insulted when he gave me a Donny Osmond smile and spoke of motherboards and ram capability. Besides that, I was so grateful for his attention that I was hardly in a position to insult him.

I had been in ComputerLand for 20 minutes before anyone even acknowledged my presence. The occasional salesperson who walked into the showroom would glance at me and, before I could smile, scurry into the back room. I didn't mind that much, though. The place was nicely carpeted, had loads of computers, and they played pleasant music, although I prefer the Beatles' version of "Michelle" to the one by Andre Kostelanetz.

At any rate, by the time Bob approached me to ask if I was being helped, I was so grateful for attention that I skipped the sarcasm and told him my story. He nodded knowingly as I told him about my writing career. Then without comment, he led me to a PC.

"Sit here and read what it tells you on the screen," he said. "It will teach you how to do everything." Then he left.

Of course it didn't, but I must admit that I was pretty pleased with myself for

I DECIDED
*it was time to shop
elsewhere. I had in mind
a store which hadn't
already pegged me as an
"illiterate."*

learning how to move the cursor before Bob returned. If he'd come back just a few moments later, I'm sure I would have mastered the fine art of inserting a word into a line. But Bob insisted on helping me. (I suspect he was a little surprised that I hadn't advanced beyond the cursor-moving stage already.)

Word by laborious word, Bob read me everything on the screen. It was humiliating enough to have this stranger assume that I could not read simple English—it was even more humiliating when I screwed up and pushed the wrong button. It seemed the computer and Bob exulted simultaneously in my stupidity. It was just about at this point that Bob told me—nothing personal, mind you—that I was an illiterate when it came to computers.

"If you had a couple hours," Bob assured me, "you could sit here and walk

out an expert." He glanced at his watch. "Of course, you don't have a couple hours now, but when you get it home, you'll figure it out in no time."

Now, maybe I couldn't insert a word into a line, but I could tell that Bob was hoping against hope that I wouldn't have a couple of hours to sit and learn the program he was calling Select. I did have the time, but the thought of him reading every screen to me was enough to make me nod in agreement. Then I asked him if he could give me some literature so I would know what I was talking about when I came in again.

Bob looked around in vain for a spare copy of PC; instead, he handed me a book. "It's a little expensive," he said, reaching out to collect \$10, "but the next time you come in, you should have a better idea what you want." Somehow, the way he thought a \$10 book might be too expensive for someone shopping for a multi-thousand-dollar purchase made me wonder how seriously he took me. Regardless, I bought the book, read it, and decided it was time to shop elsewhere. I had in mind a store that hadn't already pegged me as an "illiterate."

The Missing Machine

I also had in mind a store where I wouldn't have to wait 20 minutes to flag down a salesman. However, to leave nothing to chance, I arrived at Entré 20 minutes before closing time. I may be a computer illiterate, but I know no salesperson wants to hang around through the dinner hour.

This time a young man with a wry smile listened to me. I thought I must be impressing him with my knowledge. "I want a PC with 64K, a matrix printer, and a word processing program," I said confidently.

"WordStar," he said matter of factly, and invited me into his office.

Now, to give Paul credit, it may have been the air of faded knowledge I assumed, but I still cannot understand why he never showed me a computer for the entire 45 minutes we talked about them. He talked about WordStar, about mail merge, about all the things I as a writer could do with this program. What he never discussed was the computer and the printer, the \$4,400 part of my \$5,000 purchase.

I asked about it, of course. At the risk of losing my aura of knowledge, I even

resorted to asking what the thing looked like. He told me about the great training program his company included with the purchase price. I guess I was supposed to find out what it looked like then.

"The printer?" I asked, hoping I still might get a look at what he wanted me to buy. No such luck. He whipped a printed page off his desk and handed it to me. "This isn't done by the one you would want for your system, but it would look pretty much the same," he said. "Unless you wanted letter quality, but you said you didn't."

This presented a problem. I must have skipped the chapter on letter quality, because I had no idea what he was talking about. I may be vain, but I'm not stupid. I asked him to explain the difference. I got to look at another piece of paper, which really did look a lot nicer. That is, until he explained the difference in price to me. For several hundred dollars, I decided I could live with dots in my letters.

At any rate, Paul was soon writing out a price quotation for me. Everything was going smoothly until he asked if I wanted a service warranty that covered repairs in my home or if I wanted to bring the PC in. Sensing a last chance to bundle the equipment, I asked how heavy it was. "Not too," he said, and wrote down my selection of the carry-in service warranty with no further discussion.

He then told me for the third time about the wonderful training program I would be enrolled in if I bought the PC from him. It all seemed a little like a car salesman promising to give you driving

lessons if he wouldn't show me the merchandise. I was disappointed even though I knew I couldn't squeeze it like a melon to see if it was fresh. But as I said, I decided not to haggle. Twice he had told his manager, with only a trace of a sigh, that he would lock up the store, and I felt a little guilty about keeping him from dinner any longer just so I could see what my \$5,000 would get me.

In Good Hands

I also felt that I was getting pretty close to deciding to forget all about buying a word processor. Why not spend the money on a professional typist instead? At 50 cents a page, I could write a lot of books before I'd pay out the price of a PC. One last shot, I decided. So on Saturday morning I rose early, drove to a local shopping center at nine, and waited for an hour for the Sears Business Center to open.

Evidently computer stores are not accustomed to having customers wait outside like so many crazed shoppers at Gimbel's pre-Christmas sale. The three salespeople looked at me with more than a little bemusement. To his credit, one hardy soul looked his color-and-Danish and walked right up to me. Assuming no airs this time, I told him straight out, "I'm a writer, and I need a word processor."

I'll admit that Wico was my kind of salesperson. He was friendly, asked me all sorts of questions about my writing, and most importantly, didn't seem to have his act all together.

"Here, let me show you how the PC works," he said, and then spent more than 5 minutes putting in various disks and muttering something about boots. They didn't work. The screen just continued to give him a blank, green stare.

"Let's try another machine," he said at last as he explained why it wasn't the computer's fault that he couldn't make it work. I like that in a salesperson—the ability to take the blame when the \$5,000 purchase you're contemplating won't even wink at you.

"The only difference between these two machines," he explained as we sat down at another machine, "is that this is a single-disk drive." The other difference was that it worked. I gathered he thought I should still buy the double-disk drive model.

"This is the EasyWriter II," he explained, as the machine greeted us, in a

tone quite a bit friendlier than I'd heard from the salespeople at my other two stops. "I don't really know much about it, but I think it's what you want. Let's see if

I **THAD**
*never occurred to me
that these little
machines could be used
for this purpose.*

we can get it to work for us."

Like Bob at ComputerLand, Wico read what was on the screen word for word. Unlike Bob, he was reading it for himself, and I liked that. I also liked the fact that I figured out how to work the program before Wico did. As I said, he was my kind of salesperson.

We fooled around with EasyWriter II for awhile, and it seemed to be doing the sort of things I wanted my word processing system to do, so I asked Wico for a price quote on everything he had recommended. Then something unusual happened. My computer salesman sat at a computer terminal to do the job.

It had never occurred to me that these little machines could be used for this purpose. After all, at ComputerLand I had been given a quotation written in pencil. At Entré, at least I got it in pen and ink, but there was no breakdown on any of the items—just a short list of Hardware, Software, and Warranty, followed by a Grand Total. But here at Sears I received a computer printout.

Not only that, but the printout showed me the price of every item, whether I was buying it or not; it even reminded Wico to give me a promotional discount. Without even knowing it, I had bargained down the system by \$200, and the EasyWriter II was reduced by \$175. And Sears threw in Time Manager for free.

"But, Wico, I don't want Time Manager," I said.

"You might as well take it," he answered. "It comes with the promotion."

I walked out of Sears feeling much better about the possibility of becoming a PC

lessons if you shelled out the bucks to buy a car from him. But I decided not to haggle. After all, I had sat in front of one at ComputerLand, so I at least knew what it looked like. But, deep within me, I won-

owner. The price was pretty good. The salesperson had been nicer than I had come to expect, and together he and I had figured out that there was indeed a word processing program that would do just about everything I needed. It was time to make some decisions.

Sifting the Evidence

Everyone had agreed that I needed a PC with two disk drives. Bob at ComputerLand had recommended 128K on the motherboard; although I had no idea what this meant, the other two salespeople agreed when I mentioned it to them. All three had agreed that I needed a monochrome monitor, and all had been rather quick to recommend a dot-matrix printer over a letter-quality one. At least, they all seemed certain after I said I had no need for letter-quality printouts.

The big disagreements seemed to be over the brand of printer. At ComputerLand, Bob had vigorously pushed for an Epson printer. "Epson makes them for IBM," he had insisted, "and you might as well get all the quality for a lower price." "But I want an all-IBM system," I had told him. "Well, they're on back order," he finally admitted.

At Entré, there had never been any question of selling me any other printer than an IBM. Sears first quoted a price on an Okidata printer, but quickly switched to IBM when I voiced a preference to stay with the same name for the whole system.

Choosing the software, on the other hand, was a problem. Bob at ComputerLand had shown me Select, and then when I expressed doubts about whether that program did everything I needed, and sold me The Word Processing Book by Peter A. McWilliams and told me to choose my own.

At Entré, Paul made WordStar sound like the right stuff for me. However, he hadn't even bothered to show it to me, and reading about it in McWilliams' book made me wonder if it wasn't a tad on the difficult side. Remember, I was still thinking of myself as a computer illiterate.

EasyWriter II had been fairly easy to follow; Wico and I worked together to master some of its greatest intricacies, like deleting and changing words. I felt a fondness for it. However, I had felt a fondness for my first wife, so I wasn't sure I should necessarily follow this instinct.

Instead, I did what any sensible person would do. I called up a friend and asked for help. My friend had owned his PC for over a year and continually proselytized for the system. He is also a writer; although he has prospered more than I, deep in his heart he must know it is not because he is a better writer, but because he has better equipment. I wondered if his advice would be any good.

His recommendations were to go with the IBM printer and the EasyWriter II. Against my better judgment, I followed his advice. Now that I knew exactly what I wanted, it was time to get it.

At this point it might help if you understood me a little better, if only to grasp what I demanded. The last time I bought a car, I put it off for as long as possible. I found every reason in the world not to spend that kind of money. When necessity finally prevailed, I spent 2 hours shopping and then demanded that my car be ready within a day. I mean, for me, that day was the culmination of months of deliberation, and I did not want to wait any longer for satisfaction.

I was somewhat proud of the fact that I had actually visited three different com-

**SHE THINKS

computer.**

puter stores. I had only visited two car dealers before I made my auto purchase. But now that I had avoided facing the inevitability of buying a PC for over a year, I wanted it that day. I also figured that I would see, one last time, if I could drive down the price of the system.

In the Land of the Cannibals

I dialed up Bob at ComputerLand for what I thought would be a quick call. I told him what I wanted, and he quoted a price that was better than Sears' by a few dollars. "You're in luck," he said. "We're just

starting a national promotion, and we're giving you 10 percent of your system price off the purchase of software."

My idea of luck, however, was not necessarily the same as Bob's. "OK," I said, "will you be able to have everything ready for me if I come over later today?"

There was a pregnant pause on his end of the line. "Well, I told you the IBM printer was on back order and won't be in for a couple of days."

"That's OK," I said cheerily. "I can get the thing going without the printer and just add it on next week."

Another pause.

"Well, there's another problem," he added in slow, measured tones. "We don't have the CPU in stock today, either."

"What's a CPU, Bob?" I asked, figuring it was some little doodad you hooked up to the printer or something.

"Well," Bob said slowly, "that's kind of the guts of the computer."

Now even though I was a computer illiterate, I was fast enough to realize that what Bob really had to say was that he didn't have what I wanted in stock. I told him that since I wanted the system that day, I would go elsewhere.

"Well, listen," he said rather despairately, "maybe I have another unit around here I can cannibalize."

"Isn't that a little like putting Chevy engines in Oldsmobiles?"

"No, no," he assured me. "Nothing like it at all. Listen, give me your phone number and I'll call you right back if we can have this ready for you today."

I gave him my phone number, told him to call me back in an hour, and waited. And waited. After two-and-a-half hours, I called ComputerLand myself.

Bob wasn't in, but the woman who answered the phone was glad to hear my name when I told her who I was.

"Oh, Mr. Kennedy, I'm glad you called back. Bob lost your phone number, and he's out of the office now. But he said to tell you that he can have everything you want by tomorrow afternoon."

"I'm sorry," I told her, "but Sears has everything I need right now, so I'm going to go to them."

"But, Mr. Kennedy," she said somewhat indignantly, "we are a full service store."

"I know," I said, "but it's difficult to service what you don't have." I hung up and called Sears.

Making the Connection

Wico came to the phone, and I told him who I was. I also told him I wanted to buy the system he had quoted to me on Satur-

I WAS somewhat proud of the fact that I had actually visited three different computer stores.

day. "Just a minute," Wico said, "and I'll get that quote out of my file." Knowing Wico as well as I had come to know him at our previous session, I was not surprised when he came back more than a few minutes later.

"I have it here," he announced triumphantly.

"Good," I said. "Set the whole works aside for me. I'll be down later today to get it."

"Well, I don't know if we have everything in stock," he said, and I suddenly had visions of computer retail lines queuing up throughout the country. Odd license plates today, even tomorrow.

"But you told me Saturday you had everything!" I said, stopping just short of yelling.

"That was Saturday," he explained—a statement so eminently logical I could not argue. He put the phone down, came back in a few minutes, and told me all was well. He had just grabbed the last DOS 1.1, and everything would be ready if I came around 6 p.m.

I was so glad to know I could get it, I forgot to try and bargain with him further. I also decided not to call up Entré. To be truthful, I had known all along I wouldn't buy it there when I found no one would show me the system. The fact that its price quotation was over 10 percent higher was the other factor.

I went to the bank and wrote a check for \$4,500. When the teller looked at me suspiciously, I told her I was going to the track. She seemed to accept the explanation. Especially, I gather, since she is the teller I visit nearly every other day to withdraw money. I know she thinks I'm into something illegal or, at any rate, immoral.

I didn't want to disillusion her by admitting that (a) I just can't manage my money, and (b) I was buying a personal computer. So, with money in my pocket and a great desire to get the damned thing home at last, I went back to my office and waited for the afternoon to end.

No sooner had I walked in than the phone rang for me. It was Bob.

"Don," he said, "I can have your system ready by 11 tomorrow."

"I need it today," I told him.

"All right, I'll have it ready by 6 tonight," he said.

"Too late, Bob. I just asked Sears to set it aside for me. Besides, they were a little cheaper than your quote."

"I'll beat it," he said.

"You should have told me earlier."

"Listen," he said, sounding just the faintest hit edge, "Have you given them a deposit?"

"Bob, I gave them my word. I'm buying it from Sears."

"Well," Bob said, "just remember, ComputerLand is a full-service store." I promised I would remember that and hung up.

At 5 p.m. I left my office, struggled through rush hour on the Garden State and made it to Sears at 6 on the dot. Wico was a customer, so I set down, read the Sears extended warranty contract three times, and waited. Finally, he freed himself and came over to me.

"I still have to set your system up," he told me. "It will just take about half an hour. You can watch me if you'd like."

I chose not to, and sat at the table in the

I HAD visions of computer ration lines queuing up throughout the country. Odd license plates today, even tomorrow.

showroom. Fortunately, there was a nice salesperson in the room, and since she had no customers, she was able to make the hour-and-a-quarter pass quite quickly

for me. At 7:15, Wico came out to announce proudly that he was ready to put my PC in the crate. He seemed like a kitten that had caught his first mouse. He would have laid it at my feet, but since this would have ruined his dental work, I had to follow him back to the workroom to see what he had done.

Although it looked exactly like the system he had shown me a few days earlier, I expressed my admiration for his fine work and asked him to explain how I should set

BOB AT ComputerLand had recommended 128K on the motherboard; I had no idea what this meant.

it up at home. I listened patiently as he explained that there was a book in the bottom of the crate that would unravel the mysteries of the PC for me.

"You mean I'm on my own?" I asked.

"You'll do well," he said. He had been so trustworthy last Saturday that I couldn't begin to doubt his faith in me now, even though I knew what he was saying could not possibly be true. Instead, I signed about four papers, gave him the money, got 20 cents change for the 45 hundred-dollar bills I had given him, drove the Datsun to the front of the building, and smiled as he put the boxes in the hatchback.

Home at Last

Today, 6 days later, those boxes are still sitting in my living room unopened. I'm thinking of opening them tomorrow night. Or maybe the next. It has suddenly hit me that my Adler manual is an antique and my Smith-Corona electric isn't far behind. Yet, we three have been through a lot together. Call me sentimental, but writers do have feelings for their machines. Now that the PC is sitting patiently in its boxes waiting for me, I feel a lot more comfortable about using it. I hope it understands that this story just had to be written on a typewriter. /PC

- ① Adjustable 4" to 10" snap-on tractor feed, 4" to 10" friction feed, and fixed 10" pin platen (all standard). Fan-fold paper, cut sheets, roll paper, label, and pin-feed paper can be used.
- ② Immediate tear-off. No more wasting valuable invoices and paper.
- ③ Clean, compact, reliable black ribbon cassette. Low cost and easily replaceable.
- ④ User-replaceable 9 wire print head. 100 million character life. Print head driven by steel wire.

RITEMAN: The first 10" printer you can fit in your briefcase.

This new generation printer is half the size of an ordinary printer, measuring 2 7/8" (h) x 10 9/16" (d) x 14" (w) and weighing 11 lbs. Built solid and reliable, Riteman prints at a remarkable 120 cps, with bi-directional logic seeking, 63 lpm, 100 msec line feed for faster line spacing and forms control, to maximize throughput. True 1:1 dot ratio enables Riteman to draw perfect circles. And best of all, Riteman's advanced technology and manufacturing have resulted in exceptional cost savings.

For starters, Riteman has these features.

- 9 x 9 dot matrix • Bi-direction • Number of print modes • Underlining • Programmable line & forms feed • Parallel standard • Serial option
- 32 block graphics • 96 ASCII characters with true descenders • Italics • Skip over perf
- Dot addressable graphics
- 480 dots—Low res. graphics
- 960 dots—High res. graphics
- Compatible with most existing software

CIRCLE 257 ON READER SERVICE CARD

Bigger can indeed be better when you select a chain store as your computer dealer, especially if you plan to move or travel with your PC.

A Dealer In Every Port Whether You Travel Or Not

PC users, as a whole, are a dedicated bunch. Most of them have an intimate attachment to their machines. Some, in fact, can't bear to leave their computers behind when they go away from home.

But what happens when the well-traveled computer requires technical attention? One Washington D.C.-area PC owner recently suffered an equipment failure while on a trip to Massachusetts. He made an after-hours telephone call to the Cape Cod outlet of the franchise from which he'd purchased his ailing machine. The prompt attention he received helped him keep on schedule during his brief working vacation. The moral of the story: People who move or travel frequently can help provide an extra margin of security for themselves by buying from a multi-store operation, which is to say, a franchise.

The helpful dealer in Cape Cod was an

Entré outlet but virtually all franchise networks and chains have some kind of arrangement for transferring service and support. The heavy capitalization behind

WHAT HAPPENS
*when the well-traveled
computer requires
technical attention?*

many multi-store dealerships may also give them an edge over some independents in pricing, depth of support, product availability, and the likelihood of their being around for the long haul.

Travel Assurance

Multi-store dealerships are not difficult to find. ComputerLand, the largest with its immense cross-country network and an international reach into Canada, Europe, and Japan, counts more than 400 outlets. Many other companies are expanding rapidly. Entré, for example, has 50 stores around the country and another 50 slated to open soon. Sears has 45 Business Systems Centers. IBM Product Centers number about 45 in this country and over two dozen overseas. MicroAge claims 30 outlets, more than half of which carry IBM PCs. Businessland, which has fewer than ten outlets now, expects to grow to a total of 21 stores in California, Arizona, and Texas by the end of the year. The Macy's outlets in New York and California, plus those in Macy's-affiliated Bamberger's in New Jersey and David-

son's in Atlanta, account for eight retail computer centers.

Actually, a majority of the nearly 800 authorized dealers listed in IBM's dealer directory are franchise and chain outlets. A very large number of what IBM calls "independents"—fourth on the list of its distribution channels—are actually multi-dealerships. Entré, MicroAge, CompuShop, Businessland, and Macy's stores fall into this category.

Whether it's through the MicroAge Promise or the ComputerLand Passport Program, most multi-store operations offer the promise of service and preferred-customer treatment and support to computer owners who spend a lot of time on the road or who move to other locations. If you find another outlet of the chain or franchise that sold you your machine, you've got the same claim on this dealer's attention that you'd have at the store where you made the initial purchase.

Although there are advantages for both business and home buyers, many of the major chains and franchises are heavily oriented to business users. Phil Reed,

operations vice president at Businessland, sees a big advantage for large corporations in dealing with a multi-store dealer. "As the chain grows," he said, "we can estab-

*M*ANY OF THE major chains and franchises are most heavily oriented to business users.

lish corporate agreements with companies that have offices around the country. The company wouldn't have to deal with a lot of independents."

Price and Quality Advantages

Aside from increased accessibility, are there other benefits from a multi-outlet store not so readily available from an inde-

pendent? Dr. Harold Kinne, a senior vice president at Future Computing, a consulting and market research firm based in Texas, said, "We have not identified any substantial differences between franchises or chains and individual stores."

In regard to pricing, at least, many executives acknowledge this. Even with the potential advantages of volume buying, most multi-store dealerships are not competing with discounters.

However, most chains and franchises buy at least some of their product lines through a central purchasing office; individual stores in the network have considerable flexibility in setting prices. ComputerLand is in an especially good position to take advantage of large-scale buying, said its president, Ed Faber. "We can attract the highest margins available in the industry, and we can pass on the price breaks to each individual store owner."

Some multi-store operations may also have an advantage in product availability. If the item you want is out of stock at your local outlet, the dealer can often get it quickly from the central buying facility or

MAIL ROUTE™

Finally there is a mailing list package that is especially designed for the

IBM personal computer. Whether you use your p.c. for your home or office,

MAIL ROUTE is the best mailing list package you can buy.

The **MAIL ROUTE** package consists of two, user friendly, independent programs: **MAIL LIST** and **MERGE LIST**. **MAIL LIST** is a simple to use data base management program that allows fast and easy entry of data such as names and addresses. **MERGE LIST** is a program that merges **MAIL LIST** data files with DOS files, such as those created by EasyWriter, Edlin or other word processing or text editing software, to create customized form letters or reports.

from a nearby affiliated dealership.

Centralized product-quality evaluation is another benefit made possible by the standardization that chains and franchises impose on their outlets. Virtually all have some kind of testing program to examine as many as possible of the thousands of hardware and software products now appearing in the marketplace.

Most franchise and chain retailers require that a product meet certain standards before their outlets may carry it. Entré tests about 100 products every 10 days. Only about 1.5 percent of these are placed on the approved product list, said company marketing vice president and co-founder James Edgett. He added, "Franchisees don't have to carry everything on the approved list, but they can't sell anything that's not on it."

ComputerLand controls its store inventories by banishing products of inferior quality from its central-purchasing lists. Individual stores may choose to carry them, but in practice, said Faber, 80 to 90 percent of the total stock in each outlet comes from central purchasing. Chains

exercise even more control than franchises. All Sears stores, for example, carry the same line of products.

Service and Support

The standards imposed by a chain or franchise (or by a conscientious independent dealer, for that matter) provide an extra measure of reassurance.

IBM IS IN A
position to be as
selective as it wants to
be.

IBM's willingness to sell to a dealer signifies that the store has met rigorous standards in regard to technical competence, ability to provide backup and support, and financial standing.

The PC is IBM's first venture into

retailing computers and the company is being very careful. It's very choosy in picking dealers, and not all the stores in a given franchise are guaranteed delivery of the PC—each one must meet IBM standards. And, having gone from zero to 20 percent of the personal-computer market in just a year, IBM is in a position to be as selective as it wants. There is room for flexibility; even IBM Product Center managers have a certain amount of leeway in pricing and product selection. PC dealers, however, must meet IBM's requirements on all phases of their operations: technical, financial and marketing. As one retailer said, "IBM can't be treated the way you would treat most computer companies."

Chain and franchise executives generally point to their heavy capitalization to highlight what sets them apart from most independent or single-store operations. This financial stability means they can afford to do more. Many multi-store operations give their salespeople extensive technical training in addition to the product training provided by the manufacturer and the standard sales and marketing ses-

Make your micro work like a mainframe.

First, neatly tape the "370" label onto your IBM Personal Computer.

Now slip a dBASE II™ disk into your main drive.

That's it: your IBM PC is now ready to run a relational database system, the kind IBM put on their mainframes last year.

And you're ready with more data handling power than you would have dreamed possible before dBASE II.

With a word or two, you create databases, append new data, update, modify and replace fields, records and entire databases. Display any information, report months worth of data in minutes and zip through input screens and output forms.

You can use it interactively for answers right now. Or save your instructions and repeat everything with two words: *do Manhours*, *do Project X*, *do whatever* has to be done.

To try dBASE II free for 30 days, drop by your local computer store. Or if they're sold out, call us at (213) 204-5570. If you don't like it, you get your money back.

But if you do that, you'll have to remove the label. Because nothing short of a mainframe works like dBASE II.

CIRCLE 34 ON READER SERVICE CARD

sions. They provide product and technology updates via regular newsletters and through in-store computer networks.

Franchises and individual chain outlets often run programs of classes for end users. The stores get considerable help from their central offices in setting up the sessions. MicroAge provides step-by-step instructions, ranging "from ordering the refreshments to how long to run the class before people get tired," said one of its executives, Charles Redfern.

The architectural requirements set by several chains and franchises often specify that classroom space be included in the store layout. This indicates a strong commitment to end-user education.

The Extra Margin of Security

The large-scale product testing, readily-transferable maintenance agreements, and in-depth service provided by chains and franchises are by-products of a kind of financial commitment that most individual stores can't afford to make. Vice-President Reed of Businessland pointed out that his company "can amortize expenses over several stores."

In a fast-changing field, buyers might feel more secure in knowing that the dealer they buy from will be around when they come back for support. Franchises are far less likely to fail than are individual stores. Commerce Department figures show that since 1971, less than 5 percent of franchises have been discontinued in any given year. That contrasts with Small Business Administration estimates that some 65 percent of all small business start-ups fail within 5 years. It's unlikely that Sears and Macy's will be going out of business any time soon.

Even though IBM's careful look into the financial capabilities of all its dealers is reassuring, an extra measure of assurance may be found by purchasing from a chain or franchise. Even if the particular store you bought from closes, the organization will still be around to help you. In a very rare case where one of its franchisees closed, ComputerLand made good on all outstanding orders, according to Faber. The company continued to work with the customers through its other franchisees.

Having a store in every port can be an advantage if you travel a lot. And knowing that a dealer will still be there when you need support is important whether you travel or not.

Professional Software Products

MATHEMATICS SERIES

The Series Includes These 4 Programs:

STATISTICAL ANALYSIS I: This menu driven program performs LINEAR REGRESSION analysis, determines the mean, standard deviation and plots the frequency distribution of user-supplied data sets.

NUMERICAL ANALYSIS: HI-RES 2-Dimensional plot of any function. Automatic scaling. At your option, the program will plot the function, plot the INTEGRAL, plot the DERIVATIVE, determine the ROOTS, MAXIMA, MINIMA and INTEGRAL VALUE.

MATRIX: A general purpose, menu driven program for determining the INVERSE and DETERMINANT of any matrix, as well as the SOLUTION to any set of SIMULTANEOUS LINEAR EQUATIONS.

3-D SURFACE PLOTTER: Explore the ELEGANCE and BEAUTY of MATHEMATICS by creating HI-RES PLOTS of 3-dimensional surfaces from any 3-variable equations. Hidden line or transparent plotting.

For APPLE II (48K) and IBM PC (64K) \$50.00

BUSINESS SOFTWARE SERIES

Both Programs \$250.00

A user-friendly yet comprehensive double-entry accounting system employing screen-oriented data input forms, extensive error-trapping, data validation and special routines for high speed operation. The series includes these two modules:

GENERAL LEDGER: A complete accounting system with these features:

- Up to 500 accounts and 500 transactions per month
- Interactive on-screen transaction journal
- Produces these reports:
 - Balance Sheet
 - Transactions Journal
 - Account Ledgers
 - Account Listings
 - Income Statement

For APPLE II and IBM PC \$150.00

ACCOUNTS RECEIVABLE

A flexible system with these features:

- Up to 500 accounts and up to 500 invoices per diskette
- Prints invoices, customer statements & address labels
- Interfaces to General Ledger
- Interactive screen based invoice work sheet
- Produces these reports:
 - Aged Receivables
 - Sales Analysis
 - Account Listings
 - Customer Balances

For APPLE II and IBM PC (2 DISKETTES) \$150.00

MICRO-LOGIC

An interactive graphics program for designing and simulating digital logic systems. Using the built-in graphics module, the user creates a logic diagram consisting of AND, OR, NAND, NOR, EX-OR, D, T, JK, FLIP FLOP and powerful 16-pin user-defined MACRO functions. A typical page of a logic diagram looks like this:

The system provides on-screen editors for NETWORKS/MACROS DATA CHANNELS, CLOCK WAVEFORMS and GATES. GATE attributes include DELAY, TRUTH TABLE, NAME and I/O clocking.

The system is available for Apple II and IBM PC computers. A non-graphics version is available for CP/M 2.2. It uses the network editor to create netlists and text printer plots to display simulation results. All versions require 2-5 1/4" disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$450.00
MANUAL & DEMO DISKETTE \$50.00

PERSONAL FINANCE MASTER

The premier personal and small business financial system. Covering all types of accounts including check registers, savings, money market, loan, credit card and other asset or liability accounts, the system has these features:

- Handles 25 Asset/Liability Accounts
- Monthly Transaction Reports
- Budgets Income & Expense
- Reconciles to Bank Statements
- Prints Checks & Mailing Labels
- Automatic Year-End Rollover
- Prepares a Net Worth Report
- Searches for Transactions
- Handles Split Transactions
- User-Friendly Data Entry Forms
- Fast Machine Language Routines
- Extensive Error Trapping
- HI-RES Expense/Income Plots

For APPLE II and IBM PC \$75.00

MICRO-CAP

Microcomputer Circuit Analysis Program

Tired of trial & error circuit design? Analyze and debug your designs before you build them. With MICRO-CAP you simply sketch your circuit diagram on the CRT screen and run an AC, DC or TRANSIENT ANALYSIS. Your circuit may consist of RESISTORS, CAPACITORS, INDUCTORS, DIODES, BATTERIES, BIPOLAR or MOS TRANSISTORS, OPAMPS TRANSFORMERS, and SINSUSOIDAL or USER-DEFINED TIME DEPENDENT VOLTAGE SOURCES. MICRO-CAP can analyze any such network containing up to 40 separate nodes. Includes a user controlled MACRO library for modeling complex components such as OPAMPS and Transistors.

For APPLE II and IBM PC computers. A non-graphics version using an on-screen editor to enter networks and text printer plots to display simulation results is available for CP/M (22-5 1/4" \$550.00) systems. Requires 2 disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$475.00
MANUAL and OEMO DISKETTE \$50.00

ORDERING INSTRUCTIONS: All programs are supplied on disk and run on Apple II (64K) or IBM PC (128K) with a single disk drive unless otherwise noted. Detailed instructions included. Orders are shipped within 5 days. Card users include card number. Add \$2.50 postage and handling with each order. California residents add 6 1/2% sales tax. Foreign orders add \$5.00 postage and handling per product.

SUMO-TESTED

WOULD YOU BELIEVE 3 OUT OF 4 SUMO WRESTLERS RECOMMEND CASES BY COMPUTER-MATE™?

Neither do we. But it wouldn't surprise us. Because our cases are built with brute strength able to take a tough beating from even the mightiest challengers.

Stop wrestling with your IBM Personal Computer. With our cases, you'll have ease of transportation plus maximum protection for all your components. Standard cases available for CPU and keyboard, monitor, or full transport case designed to hold an entire system (CPU, keyboard, monitor, printer). Custom-built cases also available. For loss prevention, each case has a 3" x 5" personal identification frame and individual serial code with toll-free number. And like all Computer-Mate™ products, each case is pre-screened for excellence and backed with a 100% unconditional guarantee.

Chances are your IBM Personal Computer will never undergo a heavy bout with a Sumo wrestler. But with protection from Cases by Computer-Mate™, the odds are 3 to 1 your computer would win.

You Deserve The BEST

FIXED ASSET SYSTEM

PCIFAS is an easy-to-use record-keeping system that makes it simple for you to have complete and accurate records of your property and equipment for the IRS, state and local governments, insurance companies, and your business auditors.

PCIFAS automatically calculates ACRS and five other types of depreciation and investment tax credits needed for you to get the full value from new, lucrative depreciation tax laws.

Its wide selection of reports gives you complete management information on up to 99,999 owned or leased items of property or equipment in your office, plant, home or fleet. **PCIFAS** reports on each item by location, custodian, date, vendor, manufacturer, etc.

PERSONAL FINANCE PROGRAM

PCIPFP is the **Best** cash management system for your business or home for only \$95.00. This best-selling program is exciting because it shows you through a large choice of pre-formatted reports, bar graphs, and on-the-screen displays where your money comes from and where it goes. Businesses have found the precise, easily accessible, and complete summaries and reports of all receipts and income are invaluable management tools that can easily (and less expensively) be transformed by CPA's into tax reports, income statements, and balance sheets.

PCFAS and **PCIPFP** require DOS 1.0 or 1.1 with 64K RAM or DOS 2.0 with 128K RAM.

HERE'S WHAT OUR REVIEWERS SAY:

"Best Program's PCIPFP is first class all the way. Any company looking to sell to the personal computer market should take Best's whole package as a model—this is the way it should be done. Best Programs offers a superior package in all respects. Best is best of this lot."

Corey Sandler PC Magazine, Vol. 1, No. 10

"Well-documented . . . program runs smoothly, and always presents clear, easy-to-understand prompts. Functionally, PCIPFP is complete. The program is well done and a good value."

Will Fastle Creative Computing, January 1983

"My overall impression of PCIPFP is a good one . . . suits the needs of a great number of people who want simple, straightforward help in their personal finances."

Cliff Smith, C.P.A. Capital PC Users Group Monitor

WE LOVE TO READ OUR MAIL . . . YOU WOULD TOO!

"Brilliant software! Why? Because it's simple. Covers all needed uses. You deserve much credit as everything is so well planned out. Price is most attractive."

Mr. Erwin Jackson, Jr. Charlotte, North Carolina

"I consider PFP to be one of the finest programs for the IBM PC."

Barry N. Parsley, M.D. Lexington, Kentucky

"I have bought programs since 1977 and I can unequivocally say that PCIPFP is the best buy for the money I have ever made. Please keep developing programs. The industry needs your high standards, and your reasonable prices."

Mr. James Gore Cresskill, NJ

"The program works well and is easy to use.

The newsletter is good and I must say the level of customer support couldn't be better."

Lorne Sheren, M.D. Staten Island, NY

"Your User Report is hot . . . support from software publishers is a welcome help."

Michael Truffer Deltona, Florida

Sophisticated adult's play.

THE CREATOR™ may be the only piece of software that you'll ever need for your IBM PC*.

THE CREATOR™ will be your BASIC applications library. You create versatile, customized applications by simply answering English questions.

Even the beginner can create hundreds of applications easily and quickly. In about the time it takes to make a cup of coffee an application can be created by you. It's like *child's play*.

With THE CREATOR™, canned software may become a thing of the past. The source code is provided so that you can customize your results. To help along the way, THE CREATOR™ comes with its own detailed documentation and tutorial.

The reviews are in: "It's remarkable", "very powerful".
"delivers what they claim", "a major software breakthrough."

THE CREATOR™ is your software solution. It just may be the last one you'll ever need! Available now at your dealer.

Every Executive Needs an Organizer Like T.I.M.[®]

Your valuable business information needs to be organized. T.I.M. can do it easily and quickly on your IBM-PC. As the executive's data base management system, T.I.M. makes it easy for you to assemble all your information so it can be ordered, changed or retrieved and then printed to suit a variety of circumstances. From phone lists through

complex sales reports, T.I.M. helps you put it all together using plain English commands — no programmerese to confuse you. Plus T.I.M. interfaces with all of the most popular word processing systems as well as powerful tools like Visicalc[®] ... T.I.M. is the executive's solution that's simple to use, easy to learn and pays off in bottom line efficiency for you and your

organization. For more information see your local IBM-PC dealer or contact Innovative Software for the name of the T.I.M. dealer nearest you.

developers of
practical
businessware for
the executive.

T.I.M. III is sold at Computerland[®], Sears Business Centers, The Xerox Stores, Computer Marts, Entre' Computer CentersSM, CompuShops[®] and other independent dealers.

Selection of laboratory boards from
Tucmar, including their Extender, Lab
Master, Voice Synthesizer, Voice
Recognition, Lab Tender, Graphics
Master, Prototype, E+EEPROM, Video
Van Gogh, IEEE488, RAM/ROM, Stepper
Motor Controller, DADIO, Base Board,
Distance Tender, and Amoeba cards.

IN THE LAB

THE ULTIMATE IBM

Whether he's counting quarks or conquering the common cold, this scientist's greatest discovery is the ease with which his PC lab system lets him store and analyze data. Built around Tecmar's formidable line of industrial and scientific peripherals, his system can store over 30 megabytes of information in twin Tecmar expansion chassis, each sporting a 15 MB Winchester. His PC also boasts a removable cartridge Winchester for backing up important files.

When he wants to crunch coefficients on a nearby mainframe, he dumps data onto an IDT half-inch tape drive. Here this unit is also serving as a stand for Tecmar's Shared Device Controller, and its Lab Master—a device containing from 8 to 256 channels for analog-to-digital conversion. Resting on the good

doctor's PC is a 2-pen 7470A plotter from Hewlett Packard that he uses to record screens from his 12-inch Sony Profeel RGB monitor above. Rounding out his external hardware are a USI optical mouse for data input and editing, and an Epson dot matrix printer.

Inside the PC and the two expansion chassis are a welter of add-on boards, led by an IEEE488 Interface to allow access to the General Purpose Interface Bus (GPIB); a Lab Tender for data acquisition; a DADIO, with four independent digital-to-analog conversion channels; a Base Board with Opto-isolation input, output, and prototyping daughter module boards; an E+EEPROM Programmer/Reader for programming ultraviolet- and electrically-erasable ROM chips; and an E+EEPROM Expansion to yield a total 192K of programmable memory.

Also included are a Stepper Motor Controller for running four-phase or pulse-actuated motors; a Static RAM/ROM Board for developing programs in RAM then running them out of ROM; a ForgetMeNot CMOS (nonvolatile) memory with a battery backup; an Extender Card to allow repair, modification, and analysis of printer circuit boards; a Graphics Master to produce high-resolution color and monochrome graphics; and a Protozoa wire-wrap prototyping board.

Finally, for hands-free operation during critical experiments, he uses a Tecmar Voice Recognition board that can respond to 200 commands, and a Speech Master to produce voice-synthesized replies.

The modern, modular furniture is from Herman Miller's Co/Struc line of industrial and scientific products.

FOR HANDS-FREE OPERATION DURING EXPERIMENTS,
HE USES A TECMAR VOICE RECOGNITION
BOARD THAT RESPONDS TO 200 COMMANDS.

IN THE LAB

- IBM-compatible half-inch tape drive—Innovative Data Technology
- Lab Master—Tecmar
- Shared device controller—Tecmar
- Expansion chassis with 15-megabyte hard disk—Tecmar
- Expansion chassis with 10-megabyte hard disk—Tecmar
- IBM PC with Tecmar removable 5-megabyte cartridge Winchester
- 7470A plotter—Hewlett Packard
- 12-inch Profeel RGB monitor—Sony
- IBM monochrome monitor
- Mouse—USI
- MX-100 dot matrix printer—Epson

This attorney, who specializes in literary and theatrical clients, makes her important points with help from the PC. Her Viste quad-density floppy disk pecks can function both as backups for the 20 megabytes of hard disk storage or as archival storage for infrequently used data.

Her system also drives an automatic 3M microfilm reader for efficient retrieval of archival files and legal citations. She can bang out drafts of her research, correspondence, and proposals on a Datasouth dot matrix 220 cps printer with high-speed and near-letter-quality output. She also has a NEC 3550 letter quality printer (connected to a Microbuffer from Practical Peripherals) available when she draws up a million-dollar contract.

The Gould uninterruptible power supply will keep her system alive long enough to save important files even during a typical New York blackout. Micro General PC Weighmate assists her in mailing

thick proposals and manuscripts all over the country, while keeping postage bills pared to the bone.

Look inside her unit and you'll find two half-meg memory boards from Tall Tree Systems to facilitate cross-indexing and sorting of

Expansion boards for this counselor include two half-megabyte memory boards from Tall Tree Systems, a 3278-2 IRMA terminal from TAC, a Baby Blue, and a Hayes 1200B SmartModem card.

depositions and other trial documents. A Hayes 1200B modem on a board allows her to send and receive drafts of contracts and other documents from personal computers on the premises of her illustrious clients. She also uses an IRMA 3278-2 terminal emulator when she wants to call up royalty statements from mainframes at large publishing houses and studios.

Her PC remains turned on late at night while her bookish assistant searches through off-premises law databases for legal precedents.

By assembling sections of different contracts on a series of hierarchical menus, she can turn files of boilerplate text into an ironclad contract with a few simple keystrokes. Billing and royalty statements are calculated automatically, and can be transmitted to many clients and accounts over the phone lines.

If you want to try to get her to give up her hard-working PC system, you've got a case.

/PC

THE ULTIMATE IBM

IAN ARTIST'S MODEL

THE ULTIMATE IBM

This graphic artist can afford to be image-conscious with his picture-perfect PC. He uses his system to create images, manipulate them, store them, and print them out in a variety of ways.

He generally draws his initial images using a stylus and his SAC sonic digitizer, mounted conveniently in the corner of his drafting table. Lately, however, he's been experimenting with video digitizer boards like the one made by Tecmar, and an inexpensive RCA black-and-white television camera that let him take a video snapshot of an image he's already created on paper, and turn it into a two-dimensional array of pixels that can be manipulated electronically.

He can also create images using his FTG and Symtec light pens directly on the screen, or with his Summagraphics bit pad. The light pens are handy for moving lines and doing general editing work. But he's found that using them continuously can be very tiring, since his arm is

unsupported when he draws on the vertical surface of the screen. He occasionally tries using his Wico trackball and a succession of joysticks, but these don't allow the precise movements he needs, and are good only for rough sketches and edits.

He likes to use his Logitech mechanical mouse, which offers very high resolution and ease of use. His arm never gets tired as it does with light pens, and the three keys on the mouse can be programmed to draw lines, erase them, or paint-in areas. The mouse doesn't need much space on the desk, and lets him produce a wide range of lines, from tight, precise sketches to large sweeping arcs.

His 25-inch Sony Profeel RGB monitor has one of the most impressive CRT screens on the market, and certainly the largest. It can handle analog, digital, and NTSC inputs, but it does need a special converter to handle the IBM. Its colors come closer than anyone else's to the deep, saturated ones found only on IBM's color monitor.

And he can capture any image from his screen on his Image Resources Videoprint 5000 camera, which lets him choose between a 35mm and a 4- by 5-inch film back. When he needs ultra-high resolution, he uses the firm's other PC, with its Control Systems Artist 1 analog graphics card (that can produce a 1,024 by 1,024 pixel image), and a Dunn 635 CompactColor Camera.

If he wants to transfer a screen image to paper, he can dump the image to his IDS Prism color printer, which can overlay four basic colors and produce fairly recognizable screen representations. He also uses his 8-pen Hewlett Packard 9872C plotter to reproduce images with many fine lines precisely.

Under the hood are a Sritek 68000 co-processor chip for rapid image processing, along with an I/O controller for Ziotech. His rich-looking furniture is part of Herman Miller's Action Office Products line. Chickens and goggles courtesy FAO Schwarz.

HE CAN CAPTURE ANY IMAGE FROM HIS SCREEN ON HIS IMAGE RESOURCES VIDEOPRINT 5000 CAMERA.

This rising midwest corporate executive's star has become far brighter since he hooked a PC up to his IBM 3278 terminal. Now he can draw raw data from the company mainframe and analyze it quickly and effectively with his fully-equipped PC. And he can salt away everything from intermediate results to detailed corporate histories on his handy 10 MB Corona hard disk, and pull it all up to his monitor at the touch of a key.

His special area of expertise is in charting commodities trends, and the PC serves him admirably. The impressive graphics it lets him produce have dazzled top company executives.

After adding the finishing touches to the graphs on his IBM color monitor, he can store the images on a disk so that they can either be transmitted over his Hayes 1200 Smartmodem to the Electrohome ECP 1000 7-foot laser-aligned dichroics projection system in the chairman's suite, or routed to the smaller TSK/

Taxan 50-inch RGB projection unit in the corner of his own office. Or he can photograph them with his compact Celtic camera, or send the images to his top-of-the-line IBM XY/749 8-pen plotter. And for quick printouts, he can always dump the screen to his handy Grafrax-equipped

Selection of add-on cards for the savvy MBA include a Byad board, and five boards from AST, including an I/O, Megaplus, PCnet, modem, and 80186 board.

IBM dot matrix printer.

His system unit and expansion chassis are packed with an 8087 chip for complex calculations, a Byad board for running CP/M software, and five boards from AST: a backup modem, a PCnet networking board, a Megaplus combination board stuffed with 512K, and an 80186 board for the special software that can handle it. He's even dabbled in enough programming to turn his PC into the most powerful full-function programmable calculator on the Loop.

And, on his own time, he's become Wall Street-wise ever since he started tracking blue chips on his microchips: his own portfolio has increased so substantially that he's ordered an additional PC system for an office in his new Lake Shore Drive apartment. Each of his systems can be operated from the other, using the new Hayes communication package.

The strikingly contemporary office furniture was designed by Bruce Burdick, of the Burdick Group, for Herman Miller.

THE ULTIMATE IBM

A woman with long dark hair is kneeling on a light-colored floor, operating a large, white, floor-standing document scanner. She is holding a large sheet of paper with a single line drawn on it, feeding it into the top of the machine. The machine has a control panel with buttons and a small display. A small orange box is visible at the output of the scanner.

WORDS EYE VIEW

THE
ULTIMATE
IBM

An orange office chair with a headrest is positioned in the center-right of the frame. In the bottom right corner, a typewriter is visible, with a sheet of paper being typed on. A small, square object, possibly a calculator or a small printer, is also visible next to the typewriter.

This swank triple workstation is the last word in text-processing, from its three nimble PCs all sharing its blazingly quick Xerox 2700 laser printer, to its bit-mapped, micro-reliant software. In between are system units especially configured with large doses of memory that include track caching and electronic drive software for expeditious handling of letters, contracts, and proposals.

The various workstations are customized for specific applications. One uses an alternate keyboard from Keytronic with an improved key layout and shift-indicator lights for the typist who prefers a silent, soft touch. Another is connected to a Genius full-page display from Micro Display Systems, for documents that have special page positioning requirements. The third uses an Amdek amber screen for extra readability and an optical mouse from Mouse Systems Corp. for speedy editing. And all three stations are

equipped with text buffers to prevent them from being put on hold by a busy printer or network line.

The Xerox 2700 Distributed Electronic Printer can spew out up to 12 pages—or 600 lines—per minute, using an internal laser, and hooks up to the PC over a standard Centronics 100 parallel interface. But when a proposal or a contract has to be letter-perfect, the printer of choice is their NEC 7730 Spinwriter. And when this impact printer is busy, the typists can send their text to Diablo 630 with sophisticated forms handling devices in another linked office.

These workstations are the nodes on a larger Ethernet network, connected by 3-Com networking boards. This way, text can be shuttled to any of the three workstations, or to those in another part of the building. All the workstations can use the system's various printers, as well as its banks of Devong hard disks. Form letters can be prepared with fill-in names and addresses at ultra-high

speed from databases on the Winchester. Large word processing jobs can be divided up among several workstations and then combined as they are completed.

One of the units also functions as a Telex, routing important cables, orders, and directives to and from branch offices around the world. It keeps track of all electronic mail sent inside the office, and can digitize, store, and transmit spoken messages for callers with the proper access codes.

The company has installed several of the new flat-panel screens, which can put the equivalent of four separate conventional CRT screens on a single new plasma display. The image is nonreflective, flicker-free, and undistorted by the curved edges characteristic of most monitors currently in use.

The comfortable, yet practical seats are Herman Miller's highly-praised Ergon chairs.

THE VARIOUS WORKSTATIONS ARE CUSTOMIZED
FOR SPECIFIC APPLICATIONS.

The new COMPAQ Portable Computer. IBM compatibility to go.

Simple, isn't it? The COMPAQ™ Portable Computer can do what the IBM® Personal Computer does. To go.

It runs all the popular programs written for the IBM. It works with the same printers and other peripherals. It even accepts the same optional expansion electronics that give it additional capabilities and functionality.

There's really only one big difference. The COMPAQ Computer is designed to travel.

Carry the COMPAQ Computer from office to office. Carry it home on the weekend. Or take it on business trips.

If you're a consultant, take it to your client's office.

If you use a portable typewriter, you can use the COMPAQ Computer as a portable word processor instead.

If your company already uses the IBM Personal Computer, add the COMPAQ

you'd probably need to buy an additional display screen because the built-in screen is too small for certain tasks, like word processing. The COMPAQ Computer's display screen is nine inches diagonally, big enough for any job, and it shows a full 80 characters across. And the built-in display offers high-resolution graphics and text characters on the same screen.

The bottom line is this. The COMPAQ Computer is the first uncompromising portable computer. It delivers all the advantages of portability

In the standard configuration, the COMPAQ Computer has three open slots for functional expansion electronics as your needs and applications grow. It accepts standard network and communications interfaces including ETHERNET™ and OMNINET™.

If you're considering a personal computer, there's a new question you need to ask yourself. Why buy a com-

puter that isn't portable?

For more information on the COMPAQ Portable Computer and the location of the Authorized Dealer nearest you, write us. COMPAQ Computer Corporation, 20333 FM149, Houston, Texas 77070. Or call 1-800-231-9966.

without trading off any computing power capability.

And what do those advantages

cost?

Nothing.

The COMPAQ Portable sells for hundreds less than a comparably equipped IBM or APPLE® III. Standard features include 128K bytes of internal memory and a 320K-byte disk drive, both of which are extra-cost options on the IBM. Memory and additional disk drive upgrades are available options to double those capacities.

Portable as a mobile unit that can use the same programs, the same data disks, and even the same user manuals.

There are more programs available for the COMPAQ Computer than for any other portable. More, in fact, than for most non-portables. You can buy them in hundreds of computer stores nationwide, and they run as is, right off the shelf.

With most other portables

PC MAGAZINE'S

CONFIGURATOR

By some accounts, IBM is moving 35,000 PCs every month. That's 50 every hour of every day, almost one new user a minute. Production lines may be slow in Detroit, but the IBM elves are hammering out PCs around the clock. And who knows what other product assembly lines Boca is cranking up?

We can't confirm these figures, of course. The folks in Boca Raton enforce their brand of omeratà with such tightly closed mouths that they wouldn't admit they smalled smoke if their pants were on fire. But they're not entirely unjustified in maintaining the stony silence: They're carrying an entire industry on their billion-dollar coattails.

Today, there is a vast groaning board of IBM-compatible peripherals and software. Each month PC tantalizes readers with the wares of over 1,000 advertisers, from megalithic vendors to vest-pocket companies where the kitchen table doubles as a front desk.

The PC is a well-made collection of other people's best products, and there's not much wrong with it. Or is there? Ever since the first one hit the shelves there's been such a ruckus about the keyboard that you'd think IBM ought to just call them all back and push them into a pit with bulldozers.

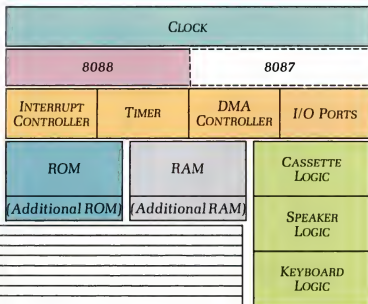

Bushwah! True the better editions of the Kaytronic keyboard are whisper-silent and sport little winking LEDs. But IBM's keyboard isn't bad; okay, its long-reach takes some getting used to, but it makes the others look sick. What else do users grouse about? Short keyboard cables? No problem, buy yourself an extender. No IBM modem? Pick up the Hayes that IBM uses in its product centers and its promotions. IBM's snazzy 8-pen XY plotter too tough on the wallet? Six smaller ones can be yours for a relative song.

In fact, you can now buy peripherals to do everything from turning on your

coffepot to weighing your mail to dialing your bookie. And this is just the beginning. Practical voice recognition circuitry, speedier co-processors, cheaper storage, and effortless networking are just around the corner, and when they hit the market you'll see a torrent of gimmicky hardware that would make NASA look like Romper Room.

The Configurator on the following pages shows the range of equipment available right now that can be hooked up to your PC. And we've been receiving new product announcements at a frenetic clip, now almost 200 per week. With prices coming down and manufacturers vying to cram friendlier and more versatile features into their hardware, your PC will soon be able to run anything ever made with printed circuits or motors inside, and perform Boolean gymnastics beyond your wildest dreams.

—Poul Somerson

Don't let price get in the way of owning a quality printer.

Adding a printer to your computer makes sense. But deciding which printer to add can be tricky. Do you settle for a printer with limited functions and an inexpensive price tag or buy a more versatile printer that costs more than your computer? Neither choice makes sense.

Here's a refreshing option — the new, compact STX-80 printer from Star Micronics. It's the under \$200 printer that's whisper-quiet, prints 60 cps and is ready to run with most popular personal computers.

The STX-80 has deluxe features you would

expect in higher priced models. It prints a full 80 columns of crisp, attractive characters with true descenders, foreign language characters and special symbols. It offers both finely detailed dot-addressable graphics and block graphics.

And, of course, the STX-80 comes with Star Micronics' 180 day warranty (90 days on the print element).

The STX-80 thermal printer from Star Micronics. It combines high performance with a very low price. So now, there is nothing in the way of owning a quality printer.

Keep your bottom line on the up and up and up.

The future never comes with any guarantees.

But there is a way to improve tomorrow's business performance today.

It's a microcomputer program called the Bottom Line Strategist.™

The future is now.

With the Strategist and your microcomputer, you can explore *alternative* business decisions and get answers to the questions common to any business focused on growth:

How much money are we risking? Will the business be profitable? When? Is that soon enough? Can we improve this by changing the price? What's the

impact of our assumptions on net worth, cash flow, market penetration and growth?

The Strategist uses seven sophisticated econometric models originally developed for companies on the Fortune 500 list.

But it's pre-programmed, so all you do is enter your current business assumptions, then sit back and watch the dynamics of your future unfold graphically.

The Strategist plots (and tabulates) your marketing and sales projections; anticipated cash flows; break-even point; Net Present Value; and more—a total of 11 production, financial and marketing forecasts.

If any area looks interesting, the unique "zoom" takes you in for a closer look at the picture. And if you don't like what you see, do it all over again.

Instantly. Without any programming. And do it as often as you need to get the results that you want.

Tomorrow's answers today.

The Strategist is a unique short-cut to experience, without the hard knocks.

You can refine your pricing policies. Optimize your cash flows. And maximize your profits while minimizing your risks.

In today's business climate, how much is that worth? The Bottom Line Strategist is \$400.

Our no risk offer.

You can check out the Bottom Line Strategist with no financial risk.

Drop by a dealer showroom and run through a hands-on demonstration. Then take home a package and use it for 30 days. It runs on 8-bit and 16-bit microcomputers (IBM PC, Apple II, CP/M, etc.) If you don't like it, return it and you'll get your money back.

For the name of your nearest dealer, contact Ashton-Tate at 10150 West Jefferson Boulevard, Culver City, CA 90230.

Better yet, call (213) 204-5570 today. Because if time is money,

the Bottom Line Strategist is money in the bank.

YOU ARE UNBEATABLE

WITH THE CYBERNETICS TWINS!!

...**E&M/COSOL**¹ and **RTI**². The combination provides a uniquely powerful set of business software tools.

E&M/COSOL IS THE MOST WIDELY-USED MICROCOMPUTER COSOL...and for good reason. Highly compatible across the widest range of micro/mini/mainframe computers, it is the language of choice for serious business applications. With the release of **E&M/COSOL** for the IBM mainframe machines (370, 30xx, 43xx), it is now possible to have compatibility over a truly huge range of computing power...from micros to mainframes.

RTI from Cybernetics (COSOL Reprogramming Tool) is a source program generator for **E&M/COSOL**, that can automatically produce a wide range of file maintenance, report printing, and other types of **E&M/COSOL** source programs. Programs produced by **RTI** provide a flexible alternative to many "database" software packages, since generated source programs may be modified for special requirements if desired. All source programs produced by **RTI** are, of course, the property of the user of **RTI**.

In addition to the Cybernetics twins, **E&M/COSOL** and **RTI**, we offer source program licenses for the most comprehensive microcomputer business applications...the MBSI Realworld³ software written in **E&M/COSOL**. Starting life as the minicomputer-based MCBA⁴ business applications, this software brings a new degree of professionalism to microcomputer applications.

Our software is available and supported for a wide range of microcomputer operating systems including CP/M,⁵ CP/M-86⁶, MP/M⁷, MP/M-86⁸, PCDOS, MSDOS⁹, OASIS⁹, TRSDOS⁹, UNIX⁹, and RM/COS⁹. Contact us for details.

After hauling 16 tons of PC-hardware to photo sites all over New York, the author was discovered clutching a \$4,000 color board while mumbling 'I want, I want . . .' When asked what was the matter, he replied . . .

If I Had A Million

Ok, I admit it, I'm a no-holds-barred hardware junkie. If you can plug a cable into it, I want it. There's something seductive and intoxicating about sleek off-white curvilinear cabinets crammed to the gills with green printed circuit boards, each sporting a geometric grid of chips as clean and beautiful as a Mondrian painting. At the last COMDEX, the sight of Quadram's new boards embedded in thick slabs of polished lucite took my breath away. They were things of beauty, artifacts like flies in prehistoric amber.

Software can be a time-saver and fun to work with, but you get tired playing the same record over and over. I'd rather have carte blanche at a computer hardware store any day. Toss in WordStar on a RAM disk and a medium-high-level language for tinkering, and I'm in seventh heaven.

One of the original PC's most short-sighted features, in the opinion of many

experts, was its paltry five expansion slots. In my fantasies, all my expansion chassis sport their own expansion chassis in a daisy chain extending to the vanishing point, and the whole contraption is powered by a direct link to a dedicated reactor at Three Mile Island.

Sure, to some folks a dream PC configuration is a single-sided, single-drive 64K unit with a bare minimum two add-on cards and a home-brewed RF modulator hooked to a flickery 1950s-vintage round tube console that had trouble three decades ago pulling in "Howdy Doody"—whatever gets the job done. Still, I'd rather work on that bare bones system than suffer with . . . a typewriter . . . or (cringe) a pencil and a legal pad.

IBM Cheese Slicer

On the other hand, each time I read a new issue of PC Magazine, bulging with

the gleaming products of a thousand different advertisers, I practically have to wear a lobster bib so I don't drool on the slick lithography. While it's true that I don't really need a \$5,000 Kratos high-resolution analog color monitor or an Electrohome 6-foot RGB projection screen that takes four guys to lift, I sure would like the chance to put both of these through their paces, push the pedal to the metal and see what they can do.

There is a limit to all this. We're starting to see a new wave of amusing products that promise to turn your five grand worth of chips and busses into a postage scale or a Mr. Coffee alarm clock or a precision cheese slicer. Unless you are trying to extend your electronic home or office of the future to the limit just to see how many cables you can snake into the back of a PC, this seems silly. Still, if anyone wants to send me one of these, I'll plug it in.

Every so often, on a slow news day in the summer, a local supermarket lets some lucky contest winners run amok and keep everything they can haul away in a frenzied 5-minute tribute to Thorstein Veblen. You've all seen the photos, I'm sure, of the chunky housewife wedged into the magenta spandex jeans, and her semi-crazed, raw-nerved spouse tearing up and down the aisles, clutching maps to the meat counter, five or six baskets in tow, screaming hoarse instructions to one another, sweeping armloads of tinned smoked octopus and hearts of palm into their carts and flinging jetsam onto the linoleum, while their neighbors bounce up and down on the sidelines like spastic game show contestants who had just snagged a Noah's Ark of plaster lawn ornaments or a lifetime supply of pen wipers.

Well, give me a couple of minutes in the back room at Boca Raton, or a mere quarter hour shopping spree at NCC, and I'll make those frantic yahoos look like finishing school graduates.

Stuffing a Gig

For starters, I'd grab me one of every co-processor board—88000, naturally, and a real 8086 and a 186, and while I'm at it, a 286 and a 188 and a 288, and now there's a 6502, and of course all three Z80s. And the obligatory 8087. Not that I'd know what to do with all these chips, but it sure would be fun to sidle up to a group of hapless PC owners who are comparing notes, and casually drop into the conversation, "Me? Oh, I'm running a pair of 586s and the entire Intel line. Got an Apple co-board too, and the trio of CP/Ms—though these days all I use is their 64K."

Mass storage is always a problem, so I'd probably want a few hard disks, and while we're at it, some muscular streaming tape drives. I hear Santa Clara Systems offers a 120-meg Winchester for the PC; I think I'd need a pair to give me a quarter gig of space. And a half dozen cartridge Winchester to balance things out. Maybe some external mini-floppies, too, just to be covered; there are at least three competing formats to confound any attempts at standardization and I wouldn't want to be caught short. Then maybe some of the new vertical technology floppies that let you store data across a disk's surface AND down into its oxide coating, and for show, one of each of the new half-heights.

How much RAM? Here I feel gypped;

the PC can only address a scant megabyte, and chunks of that are reserved for such trifles as video memory and ROM. Well, my 88000s would make short work of that, and I see that companies like Raytronics are crowding about boards that can handle the entire meg, and plug in either the standard 64K chips or the new 256s. And

**YOU COULD
detonate an MX
warhead in the main
Con Ed switching
station and my dream
PC wouldn't bat an
eyelash.**

while I'm thinking about it, make them ceramic chips; they cost more than the plastic ones so they must be better. What I am going to do with this acre of memory isn't exactly clear, but it's good to know it's there. I could turn some of it into a spooler but that would mean foregoing external printing buffers. And if anyone is ever going to look under the hood, I'll want something that will knock his socks off, like a module of cryogenic or charge-couple-device RAM, with the liquid hydrogen steam boiling madly off the refrigeration unit.

RAM Juice

Now RAM is plenty handy when you're using a disk-bound program like old faithful WordStar. Throw hit-mapped version 3.3 onto your chips, load in your data file and you're ready to fly. But I'm always terrified that a freak magnetic storm or the Aurora Borealis or something is going to streak overhead and take my PC momentarily to the hit cleaners. So I KO copy every other paragraph to a floppy (especially now that MicroPro has made it easy to reconfigure function keys).

What this country needs is a RAM board either with its own juice or otherwise hooked into a non-interruptible power supply. Well, there's CMOS, but it's bulky and I'd have to worry about the batteries. I'll snap up a few dozen K anyway. And a couple score K bubble memory too.

Speaking of power, my wall current would be massaged and smoothed out by so many in-line filters that Thomas Edison himself wouldn't recognize it. You could detonate an MX warhead in the main Con Ed switching station and my dream PC wouldn't bat an eyelash. While we're at it, there'd have to be a slew of ni-cads in the closet and a small Honda diesel generator in the alley. In the next New York City total blackout, all you'll see from the air is the lights from five hospitals... and my PC.

Went to ring me up? My modem would have auto-dialing, auto-answering, auto-redialing, auto-encryption and decryption, a fingertip directory, full duplex, half duplex, echo-plex, speeds up to 9600 hps, pulse and Touch-Tone, four-level phase shift keying, PC Talk firmwired-in, and an electronic switch interrupter to blast a clear line through any Bell Central office in the world, to bypass such nuisances as busy signals, nosy operators, wiretaps, and password traps.

Mice for Octopis

For fun, I'd have such an array of input devices that I could keep my keyboard in a drawer. A maze of mice, both mechanical and optical; hit pads and touch pads; touch screens; sonic, resistive, and magnetic digitizers (both 2D and 3D); light pens; track balls; both types of joysticks; and enough paddles, triggers, foot pedals, and steering wheels to hypnotize an entire cub scout troop or keep a herd of octopis occupied. I'd want the IBM game board except I'm against it on principle; all the circuitry on it should be the left end of one small chip delivered with the system unit. Finally, I'd slap in a third-generation speech recognition board that could underline text from the tone of my voice and pick the proper homophone from its context. And if anyone knows about a smart hand-held optical reader/scanner that would allow me to input text by waving a flexible wand over a page at a time, I'm interested.

Of course, if a manufacturer announced the availability of a separate function keypad with programmable LED labels, and about 40 more programmable function keys, each of which could hold a couple K of characters, I'd fly to the factory tonight cash-in-hand and pick up serial number #000001.

The graphics workstation I really want

costs a tidy 400 grand, but that's the price you pay for high-speed 4M by 4M res these days. I'd settle for half that, which means we're talking analog all the way. Control Systems is pushing a 1024-square board with half a meg onboard RAM; if I couldn't do better, I'd settle for that. For output there's only one display of choice: the main multi-color billboard in Times Square. I mean, put that on one wall of your living room and you've got the drop-dead conversation piece. Of course a flat-panel plasma display the size of a Greyhound bus would be nice, too. Sony's 25-inch snazzy RGB Profeel isn't bad for a TTL output, but digital is so... well... old-fashioned. But if you're limited to current canned IBM-oriented software, it's the monitor of choice. It's also the heaviest television I've ever seen; it could give Arnold Schwarzenegger a hernia.

Conographic's forthcoming board, while digital, is expected to offer a combination of vector-styled graphics and a vast library of primitives and utilities that will sprint through image-creation and leave all the others in its dust. Sign me up.

Star Wars Printers

Xerox makes a dandy little laser printer that can crank out copy faster than you can stack it, and it's only \$20,000. As the big shots in El Segundo point out, you can't just reach over and plug it into your PC, but with a minimum of tweaking the thing can work like a charm. Still, the quality is about that of a photocopy, and it's in plain old black and white. I've heard rumors about lesser or ink-jet printers that can reproduce the spectrum. If anyone can confirm this, let me know, and I'll put one on the list. Then there's IBM's fabled 3801 laser printer, but it would be hell to patch

lant of an old steam engine coal stoker to load the boxes of paper it eats.

The NEC 3550 Spinwriter is built like a Sherman tank, bangs out snappy impact printing, and will let you feed just about anything into it—but at a dinky 35 cps, is far too slow. While I'm pretty happy with my NEC 7730, I hear next year the company is updating it to wire in some word processing smarts and add on the standard breathtaking NEC forms handling. According to leaks, they're working on a version due a bit later that will be faster than the current 55 cps. I can't wait. The new Diablo 630 ECS boasts 196 characters on one daisy, plus switch-selectable firmware to yield 400 or so combinations of characters. Then there's the Fujitsu, rated at a rabby 80 cps, but I've never seen one. I want them all.

Nodes on Borneo

Tektronix and Hawlett-Packard and one or two others have some anonymous flatbed plotters I wouldn't mind taking home if I knew I could get them through the front door. These can come in handy if you're charting the hourly history of the world from day 1, or the monthly ad hole for PC Magazine. But I also might need 6 by 10-inch transparencies, and could definitely make do with a Dunn floor model camera, or in a pinch, one from Matrix, Modgraph, or Omega Resources. While we're at it, Tecmar's VCR interface would let me save a frame at a time on standard videotape—a fun toy end a useful tool for animators.

The PC can handle dozens of languages but can sing in only one voice. There are several big unnamed companies working far into the night to change this, and how could anyone refuse? Even Commodore and Atari can make the PC's music ability look flat. A full diapason organ keyboard would be a plus, as would a pair of 50-inch movie theatre speakers. And while we're at it, how could we miss a state-of-the-art speech synthesizer that could tell jokes in a dozen dialects.

Put me down for one of every communications board with the word "net" in it somewhere. I want to be tied in to anyone anywhere with a free node, especially my European pals hooked into Arpanet. Heck, I'll bounce data off the moon to throw it to Borneo if I can find someone there with a PC. And to think I complain about my phone bills now.

The Robot Arm of the Law

Ok, there are scads of other fun items anyone can plug in today. Tecmar's Video Van Gogh digitizer for instance. You can

PUT ME DOWN
for one of every
communications board
with the word "net" in
it somewhere.

hook it up to an inexpensive monochrome TV camera and take video snapshots with your PC, picking up 16 distinct grey levels. Might even be able to grab frames off the air and fill up your disks with rerun stills of Sergeant Bilko or Dobie Gillis. And I'll obviously need banks of parallel and serial ports as long as my arm, including the next generation of high-speed serials. And a clock that not only stamps files but chimes the hour and marks the tides. And enough emulators so that I forget there's a PC under there somewhere at the bottom of the pile. And a special filtered, fan-driven 1.1x atmosphere-pressure room would be nice as the ultimate dust cover.

But what would really top the whole thing off is a robot arm, perhaps the IBM RS1 (though this is usually driven by a Series 1 computer). If anyone unauthorized gets too close to the rest of all this equipment, the robot arm reaches down, grabs the intruder by the scruff of the neck, and pins him until the riot squad shows up.

Fact is, the PC is an astoundingly versatile hunk of metal and silicon, and you'll soon be able to patch in just about anything mechanical or electrical made today, if you can't already. And remember, the micro age isn't even a decade old. What's ahead is exciting, and halfway scary. More of the same, only faster, smaller, portable, vastly more powerful. The IBM PC has turned de facto standards into official ones. Megatons of future hardware are scrolling across CAD CAM screens at this very minute and the lion's share will be hammered together in the months ahead expressly for the PC and its imitators. I can't wait. /PC

Asynchronous Serial
Com. Option, EIA RS232
Standards, Switchable as
Com 1 or Com 2

Game Option. Attach
up to 4 paddles or
2 joysticks

The PC Express..... designed to help you cut costs

It makes little sense to pay for functions you don't want.

That's why Back Bay Computers created the PC Express board, so you'll be free to purchase only the exact configuration needed at the time. In the event additional options are desired, we'll upgrade your card to meet your most rigid requirements.

And if for any reason our work fails to please you, return the card within ten days for a full refund. We want to do business to your complete satisfaction. With that objective in mind, we manufacture each option to the highest standards, using only the finest and fully tested components. This rigorously followed fabrication plan allows us to extend a full 90 days parts and labor warranty on each option.

The major thrust of the PC Express is a broad based, cost saving flexible approach to computing. Drawing less power than the IBM graphics card, the simple installation also fits perfectly into any full slot on the IBM PC and XT machines.

Back Bay Computers believes its production effort is a success. We think you'll agree.

DEALER INQUIRES INVITED

Bob Wilson is waiting for the reports he needs...

... and waiting, and waiting, and waiting...

He could be rescued by ResQ

ResQ is quite simply the easiest-to-use, fastest and most comprehensive information management system ever developed for the IBM Personal Computer. It was designed from the ground up to provide you with the exact information you need... *only* the information you need... in the exact form you need it... now!

Best of all, you don't have to know a thing about computers to take full advantage of ResQ almost immediately!

Like many other Data Base Managers, ResQ organizes, files, locates, controls and interrelates just about any kind of information. It prepares reports and mailing labels, is a general filing and reference system, handles customer records and inventories, tracks sales leads and follow-ups, and does the required calculating for any of these functions automatically. But that's where the similarity to other systems stops!

ResQ is the *only* system that allows you or a secretary to design your *own* forms and reports, create them right on the screen, then have them continuously available at the touch of a key! ResQ offers password protection to keep confidential information confidential, and does it on a number of different levels. ResQ reads, searches and sorts data faster than the fastest competitor we've tested.

ResQ's larger fields hold more information, and field sizes can be easily changed to increase your number of salesmen, products, files or reports. It allows for calculations on up to 8 levels of totals at report time, and interfaces with most popular word processing programs.

KEY Software Inc.

2350 E. Devon Ave., Suite 138
Des Plaines, Illinois 60018 • (312) 298-3610

The ResQ "How-To" Manual is written in plain, simple English—not like a scientific textbook in a foreign language! It was created for immediate use by clerical help who had never touched a computer before. It's been tested... and it works! As an added feature, "help screens" are always immediately available to answer questions for the user, without having to turn to the Manual.

We believe you'll be absolutely thrilled with ResQ and the way it prepares reports, manages information and solves your business problems. We're so certain that we offer ResQ with a 30-day money-back guarantee of satisfaction. You can try ResQ in your own business environment and prove its value for yourself... completely without risk!

That's a very remarkable offer... but ResQ is a very remarkable system!

Order ResQ through your local computer store, mail the coupon below or call...

(312) 298-3610

KeySoftware Inc. 2350 E. Devon Ave., Suite 138, Des Plaines, Illinois 60018

Please send me ResQ Software System(s) including diskettes and comprehensive, plain English Manuals at \$395.00 each including postage and handling. I understand I may return these materials within 30 days of receipt for a full refund if not completely satisfied.

P-4

This Programming professional deserves a lot more from his personal computer.

He's earned it. As a seasoned professional, he's learned to master some of the world's most advanced programming tools. Tools specially designed to meet the everyday demands of programming experts.

But as the owner of a personal computer, he's come to expect less. Less performance. Less sophistication. And less flexibility.

Why should programming a personal computer be any different?

Prior to the announcement of micro/SPF™ development software, experienced programmers felt programming a personal computer was a lot like playing with a toy. You couldn't take it seriously.

But today, there's micro/SPF™ a solution to elementary program editing tools now offered with most micro-computers.

With micro/SPF™ you get the same procedures and commands experienced programmers are accustomed to using at work. By mimicking features found in

standard SPF software, micro/SPF™ provides all the sophisticated utilities programming professionals expect.

Programming experts can take advantage of skills they've spent years perfecting.

Now, for the first time, mainframe software is available for personal computers. SPF screens are fully reproduced in logical sequence and each screen is formatted identical to those found in the SPF system.

In addition, micro/SPF™ comes equipped with the same primary and line commands, tutorial messages and program editor (with program function keys) experienced programmers are used to.

Programming professionals who've spent years perfecting the art of writing sophisticated code deserve to work with state-of-the-art tools, not toys. Find out how micro/SPF™ can help you do work-compatible programming on your personal computer today!

MIND TOOLS

THE RESULTS YOU WANT WITHOUT ALL THE STEPS.

Get a jump on using Multiplan™, VisiCalc® and SuperCalc® with Sams new Mind Tools™, the enhancements that work with your electronic spreadsheet to give you the results you want immediately!

Mind Tools take the preliminary steps out of using your electronic spreadsheet program. They automatically supply your electronic spreadsheet with the correct formulas and column headings for whatever calculations need to be done. All you do is enter the figures you want calculated, and the answers appear instantly!

To get started, all you need is your regular version of Multiplan, VisiCalc, or SuperCalc, plus the corresponding Mind Tool programs for your microcomputer. Sams complete documentation, including a quick-reference guide, makes Mind Tools easy to learn and use, even if you've hardly used your spreadsheet before!

Available For	APPLE®	IBM® PC	TRS-80® Model II
Multiplan	\$79.95	\$89.95	
SuperCalc		\$89.95	
VisiCalc	\$79.95	\$89.95	\$69.95

You'll be amazed at what you can do with:

- Sams pioneer Financial Planning Mind Tools and their 17 business/finance calculators
- NEW Sams Real Estate Analysis Mind Tools, with special income-property buy/sell and profit planning calculators
- NEW Sams Property Management Analysis Mind Tools, with custom calculators for income-property management
- NEW Sams Personal Finance Analysis Mind Tools, with unique, in-depth calculators that help apply forecasting and other sound business principles to personal income and expense management

Get Sams Mind Tools from computer stores and bookstores nationwide, or directly from Sams. Call 800-428-3696 or 317-298-5566 and ask for Operator 352.

In Canada, contact Lenbrook Electronics, Markham, Ontario. Prices subject to change without notice.

SOFTWARE FOR HARD DECISIONS

Financial Planning and Analysis comes to your IBM PC Microcomputer

VENTURE is a complete Application System designed for Business Planning, Strategic Planning and Capital Investment Analysis.

VENTURE allows you to forecast the profitability of proposed and existing business situations.

VENTURE provides for a variety of approaches to your specific needs.

VENTURE "creates" time. You set the limits, not the program.

VENTURE is priced at \$495.00.

Requires: 192K, 1 disk drive, monochrome monitor, PC DOS.
IBM PC is a trademark of IBM Corp.
Dealer inquiries welcome.

VENTURE

from WEISS ASSOCIATES, Inc., Specialists in planning and control systems

VENTURE contains all the logic, accounting procedures, equations and reports you require. As a result, planning models are quickly and easily established. You simply specify your parameters and enter data.

VENTURE provides you with ten all-encompassing reports:

- Income Statement
- NPV/DCF Sensitivity Analysis
- Percent of Sales Statement
- L.T. Assets & Depreciation Analysis
- Detailed Income Statement
- Working Capital
- Cash Flow & ROA
- Balance Sheet
- Present Value Analysis
- Financial Ratios

VENTURE uses the most up-to-date accounting procedures and is state-of-the-art in financial planning techniques. The system is flexible. It allows for many choices in defining relationships and performing calculations. For example, you can specify Operating Costs as: Dollars; % of Sales; % of CGS; Cost per unit... Choose from eleven depreciation methods including ERTA '81 ACRS, three present value discounting methods...

Intricacies of the planning system are already accomplished. This permits more time for you to focus on your planning functions allowing you to refine, analyze and evaluate more factors and alternatives to help you better achieve your Planning goals.

Companies interested in the future have an interest in VENTURE.

To order the VENTURE FINANCIAL PLANNING AND ANALYSIS SYSTEM send check or money order for \$495.00 to VENTURE, c/o Weiss Associates, Inc.

There are three good reasons why we're called "one of the fastest growing software companies in the business"

FRIENDLYSOFT, INC.

ARLINGTON, TEXAS

Producers of innovative, quality software products
EXCLUSIVELY for the IBM Personal Computer

CIRCLE 268 ON READER SERVICE CARD

All FriendlySoft products are available through an international network of dealers including COMPUTERLAND STORES, IBM PRODUCT CENTERS, COMPU-SHOPS, ENTRE COMPUTER CENTERS and a growing list of independent software dealers.

A Great Software

FriendlyWare PC Introductory Set

VOTED THE 5TH MOST POPULAR IBM SOFTWARE ON THE MARKET IN SOFTALK MAGAZINE'S RECENT READER SURVEY.

MONEY magazine described the Intro Set as one of the two best learner programs available for microcomputers.

PC magazine said it "had to be seen to be appreciated".

According to SOFTALK, "the implementation and sophistication of the Introductory Set are superior to anything available in the public domain".

The Intro Set is a must for novice users, but it's a lot more than just a starter set. Even seasoned pros are finding things they like among the 4 demo programs, 17 games, and 8 utilities on the package.

Some are even saying that several individual programs on the set (such as the Personal Check Book on disk #3) are worth the price of the package all by themselves.

SUGGESTED RETAIL \$49.95

FriendlyWare PC Arcade

They told us that IBMers wouldn't buy games; but our customer feedback told us otherwise.

When the first two PC ARCADE production runs sold out before they shipped, we knew our customers were right.

PC ARCADE is a solid lineup of 10 fast-action arcade games for the IBM PC.

ASCII MAN, EAGLE LANDER, STAR FIGHTER TX-16, SHOOTER, BRICK BREAKER, GORILLA GORILLA, ROBOT WAR, BUG BLASTER, HOPPER and PC DERBY.

All 10 were written in Assembly language for speed and Text Mode for use on monochrome OR color monitor.

All games feature a PAUSE BUTTON and BOSS IS COMING KEY, and all but one of the games (EAGLE LANDER) can be controlled with EITHER a joystick or the keyboard.

And best of all, you can play them forever on five rolls of quarters.

SUGGESTED RETAIL \$49.95

FriendlyWriter

FRIENDLYWRITER is the best little letter writer you've ever learned to use in 10 minutes.

If you want to produce a 175 page manuscript with footnotes and automatic pagination, you'll need to use one of those big, complicated, word processing monsters.

FRIENDLYWRITER was designed for normal, everyday, business and personal letters that you can produce the very first time you boot up the package.

SUGGESTED RETAIL Under \$70.

B Great Prices

The days of the \$495.00 "Watizdo!" software package are over.

The same is true for \$39.95 one game packages.

Software pricing is coming down out of the clouds, and today's software consumers are proving once again that the old American business ethic of "producing a quality product at a fair price" still has merit.

At FriendlySoft, our objective has always been to give you the products you want, in a format that you can use and appreciate, at a price you can live with.

So far, your response is telling us that we're on the right track.

C THE BEST Great Support

No other software company in the world backs their products as completely and as simply as we do.

THE FRIENDLYWARE "NO FINE PRINT" LIFETIME GUARANTEE states:

"If your master diskette fails due to normal use, we will replace it, AT NO COST, within 48 hours or receipt of your original master.

If your master diskette fails due to abnormal use (staple in media, food on hub ring) we will replace the programming onto your diskette within 48 hours of receipt of your original master and a blank, unformatted, diskette.

We also offer a unique 24 hour hotline, where you get quick answers, instead of taped messages.

In short, FriendlySoft is the unchallenged leader in software product support. And we intend to stay there.

And you thought the IBM PC was only for business.

It was.

Until Mirror Images began designing computer games especially for the IBM PC.

Spyder is a fast-paced arcade-style game that pits you against an army of fierce, hungry spiders. Blast them with your laser gun. Or stomp on them as they come your way. **\$39.95**

If you've ever dreamed of commanding a star cruiser, **Tachyon** is your game. As commander of The Avenger, your mission is to destroy the Galyon fleet with your computer-driven torpedoes and lasers before the enemy penetrates your shields and destroys your ship. **\$39.95**

You'll need cunning strategy to beat the computer at **Hide and Sink**. A naval battle waged by subs, PT boats, cruisers, destroyers, and battleships rages on your screen. Hide your ships carefully. Then seek out and destroy the enemy with your guns and missiles. **\$29.95**

And so we tempt you to take a well-deserved break from the day's stress and frustration. Then you may straighten your tie and head back to the board room. Completely refreshed and invigorated!

Contact your local dealer or send a check or money order to Mirror Images. Please include \$1.50 for postage and handling. NY residents add 7% sales tax. Credit card orders are also welcome.

Dealer inquiries welcome.

Requires 54K DOS 1.1, color graphics adapter. Tachyon: double-sided drive; Spyder, Hide and Sink: single-sided drive.

IBM is a trademark of International Business Machines Corp. Tachyon, Spyder and Hide and Sink are all registered trademarks of Mirror Images Software, Inc.

PERSONALITY™

SERIES EXPANDS AND ENHANCES YOUR IBM PERSONAL COMPUTER

PERSONALITY™ SERIES offers fully IBM PC compatible multi-function adapters and software with exceptional flexibility and upgradeability. **PS-3270 PERSONALITY™ SERIES** is the first fully IBM compatible 3270/BSC/SNA/SDLC emulator. Utilizing dedicated PS-GCA communications adapter, ABM's 3270/BSC emulator and CSI's proven ACCESS®/SNA emulator, it interfaces with 3704/3705 communication controllers and emulates 3276 Control Unit Display Station and 3274 Control Unit supporting 3278-2 and 3278-12 displays and 3287-2 printers.

PERSONALITY™ SERIES HARDWARE

- **PS-3276/BSC Control Unit Display Station** and 3287-2 printer emulation \$1295
- **PX-3276/BSC Add3 3 downline 3101 compatible terminals** emulating 3278-2 terminals. \$695
- **PZ-3274/SIC/BSC Add3 3274-SIC control unit** supporting 12 downline IBM PC's emulating 3278-2 displays. \$695
- **PS-3276/SNA/SDLC Control Unit Display Station and printer (LU2/LU3) emulation.** \$1595
- **PY-3276/SNA Add3 3 downline 3101 compatible terminals** emulating 3278-12 terminals. \$695
- **PZ-3274-SIC/SNA/SDLC Add3 3274-SIC/SNA/SDLC/LU2 control unit** supporting 12 IBM PC's emulating 3278-12 displays. \$695
- **PC-3276/BSC/SNA/SDLC Combined emulator** with interactive protocol switch. \$1895
- **PS-GCA** \$995
- **64KB RAM Memory**
- **Z80B Processor at 477 Mhz**
- **8 General Purpose Timers**
- **4 Programmable Sync/Async Serial Ports**
- **Parallel Printer Port**

- **OMNI-BOARD™** from \$145
Featuring up to five functions on one board, the OMNI-board provides the capabilities of an expensive chassis on a single board. Fully IBM compatible adapters provide a parallel printer port, up to two RS232 asynchronous communication ports, game adapter which is compatible with IBM software and connects to two Apple compatible joysticks and the clock/calendar option with rechargeable battery backup. No need to return to factory for upgrades - options are easy to install! Full documentation and software to read, set and automatically reset the system clock to the correct time and date automatically upon power-up included.
Printer, game & clock \$238
Printer, game, clock & RS-232 \$265
Printer, clock & RS-232 \$275
Printer, game, clock & RS-232 \$295

- **Two RS-232 IBM PC Compatible Asynchronous Communication Ports.**
- **2 Apple Joystick Ports** compatible with the IBM PC game ports.
 - **IBM PC Compatible Parallel Printer Port**
 - **Clock with rechargeable battery backup and software.**

PS-GCA BOARD

512KB MEMORY BOARD

OMNI-BOARD™

- **MEM-512** Populated with 64KB RAMs \$195
- **KIT-64K** Additional 64KB RAM \$65

- **APPLE® JOYSTICK INTERFACE MODULE** For 2 Apple joysticks \$29
- **TWO SLIMLINE DISK DRIVES** Plug into single IBM PC disk drive opening. Second drive provided with mounting bracket. IBM PC compatible. Dual sided/dual density disk drive \$285
- **BSR-X18® CONTROL MODULE** \$95
This integrated module plugs into the DIN cassette connector of the IBM Personal Computer and provides full remote control of 256 BSR appliance or switch modules and comes with sample software and test programs
- **TELEPHONE RECEPTIONIST ADAPTER** \$995
The telephone receptionist adapter connects directly into a modular phone jack and provides a fully featured 300/1200 baud Bell 103/202 compatible modem with auto dial and auto answer. A voice synthesis unit and touch tone decoder provide interfaces for automatic telephone answering and remote data input. Audio and control outputs enable the IBM PC to function as a telephone answering machine. Configurable. Includes test to speech software and extensive vocabulary.
- **PROTOTYPING BOARD** With bracket and DB25 connector provision \$45

- **COLOR TO MONOCHROME INTERFACE MODULE** \$95
Plugging conveniently between the IBM monochrome display and the RGB connector of the IBM color graphics adapter, this integrated module gives you the capability to use all the graphics and character line features of the IBM color graphics adapter with IBM monochrome display.

PERSONALITY™ SERIES SOFTWARE

- **DISKSAVER® PROGRAM** \$49
This elegant utility program allows you to create backup copies of most software protected diskettes. It offers the ultimate protection against accidental damage to your valuable software and comes with full documentation. The DiskSaver™ motto is not software is protected.
- **PASCAL GRAPHICS LIBRARY** \$95
This IBM PASCAL compatible library provides full access to the graphics of the IBM color graphics adapter. All graphics functions supported by the IBM BASIC are implemented as PASCAL procedure calls. Full documentation and software examples are included.
- **8088/8085 CROSS ASSEMBLER** \$195
Including source of the loader for the PS-GCA adapter.
- **MEMORY DIAGNOSTICS TEST** Any size memory \$19

NEC's new letter-quality printer gets personal with IBM.

The Spinwriter™3550 lets the IBM PC get down to business.

NEC's new Spinwriter letter-quality printer is the only one plug-compatible with the IBM Personal Computer. So you get the business applications you've been wishing for. Letter-quality output for word and data processing. Multi-language, scientific, and technical printing. Simple forms handling. Quiet operation. And the reliability of the industry's most popular printer line.

NEC designed the new Spinwriter especially for the IBM PC. It comes complete with documentation and training materials to fit your PC user's handbook. Just plug the Spinwriter in and your PC instantly becomes more versatile and flexible.

More than 8 forms handlers and 50 print thimbles boost PC versatility.

NEC designed the Spinwriter's 8 modular forms handlers to accommodate a wide range of paper and document sizes and types. The easily mounted handlers let your computer print out the forms you

need for data processing, word processing, graphics, accounting or other business applications.

The Spinwriter's 50 print thimbles can more than triple your PC's usefulness. They come in both constant pitch and proportional-spaced fonts, plus in foreign language, technical and scientific versions. They snap in and out in seconds, and let you print up to 203 columns on 16-inch paper. They each last for more than 30 million impressions.

This printer's special features make everything look better on paper.

The Spinwriter's software-invoked features include automatic proportional spacing; bidirectional, bold and shadow printing; justification; centering; underlining; and sub/super scripting, all at speeds up to 350 words per minute.

That big extra, Spinwriter reliability. Spinwriters have the industry's best mean-time-between-failure rating, in excess of 3,000 hours. In terms of average personal computer usage, that's more than five years.

The Spinwriter 3550 is available at **ComputerLand** stores, **Sears Business Systems Centers** and **IBM Product Centers** nationwide.

ARCADE IS HERE!

Finally, arcade video is here with **Fast-N-Fun's** new *Ultralight Command* video game. It's the first and most exciting high speed arcade game for your IBM PC featuring smooth horizontal scrolling.

You command a specially outfitted ultralight aircraft. It's half push-prop airplane, half hanglider, and equipped with enclosed cockpit, powerful laser, and full radar. Sound sophisticated, fast, and fun? It is! But, it's easy enough for all eyes to enjoy.

Defend your boats from the highly animated attack helicopters, alien pods and saucers, and their awesome firepower. Sweat your way through each attack wave of enemy squadrons. Be commended from mission control with *actual voice transmissions* that emanate from your PC's existing speaker, *with no additional hardware!* All this, plus sound or silent play, joystick or keyboard controls, and multiple difficulty levels.

If you've played *Defender* or *Stergate*, you'll love this one. Study the actual screen photograph above. Re-read this advertisement if you have to. But whatever you do, achieve *Ultralight Command* capability by ordering your copy of *Ultralight Command* today.

Meet the Competition.

Peachpak™ or The Accountant™?
There really is
no comparison.

When you're looking for integrated accounting software, you want a package that you can afford now, that will cover your present needs and will easily adapt to your future requirements.

Meet The Accountant. Here is a Peachtree™ compatible software package that will do everything the Peachpak will do and more, much more — for less money.

The Accountant is easy to learn and use. It is completely menu-driven and includes sample data files to help you get up and running — fast.

Read the chart below, then call us for our information packet. See why we say:

Enjoy the RAMific

PDI464

Pure Data presents the unparalleled combination board
for your IBM® Personal Computer.

The PDI464 features six separate functions — expansion memory, two asynchronous serial channels, a real-time clock, a disk emulator, and a print spooler. Together with its high quality, the PDI464 offers a price-performance ratio that is tough to beat.

The memory section of the PDI464 provides up to 256KB of fully socketed expansion memory with parity generation and checking. Four memory sizes are available from 64 up to 256KB to meet a variety of needs. Regardless of memory size ordered, each PDI464 is tested with a full complement of 256KB of memory to ensure trouble-free future expansion. Disk-based memory diagnostics are included which can test memory integrity and report problems down to the chip level.

Two asynchronous serial channels are provided which are completely compatible with IBM serial channels. Each channel can be selected to reside at one of four addresses to allow for future expansion. A unique feature is provided which allows simple selection of data terminal or data communication equipment [DTE/DCE] configurations, thus eliminating the need for special cables or null modems. Each channel comes complete with a 6 foot RS-232 cable.

The Real-Time Clock section features quartz-crystal control and lithium battery back-up to ensure years of trouble-free operation. The RTC features hours, minutes, seconds,

day-of-the-week, date, month, and year with automatic leap year adjustment. Software is provided to initialize system time and date information automatically upon power-up.

p-Disk™, a disk-emulation package provided with the PDI464 allows memory to be treated as an ultra-fast disk drive. p-Disk™ can be configured as a single or double-sided drive and can appear as drive B, C, or D. p-Disk™ does not require modification or patching of the BIOS or DOS files on system diskettes and is fully compatible with IBM software and diagnostics.

A background printer spooler is included with the PDI464 which allows files to be printed on a printer while other software is being used in the foreground. The spooler offers features such as menu-selectable configuration, multiple copies, and upper case options.

Comprehensive documentation is provided with numerous illustrations to simplify installation procedures. All documentation fits neatly into existing 3-ring binders provided with the Personal Computer.

Each PDI464 is "burnt-in" at elevated temperatures and fully tested. Packaging material provides protection from static and mechanical shock during shipment to further ensure reliability. The PDI464 is covered by a one year limited warranty.

p-Disk™ is a trademark of Pure Data Ltd.

PDI256

256KB Expansion Memory for your IBM Personal Computer.

- ☐ Configured as 4 banks of 64K bytes each
 - ☐ Each 64K bank is individually addressable and locatable on 64K byte boundaries
 - ☐ On-board parity generation and checking
 - ☐ Refresh is synchronized with Planar Memory insuring present and future compatibility
 - ☐ Full speed, no wait-states
 - ☐ Intel 200 ns ceramic DRams are used throughout
 - ☐ Active delay line incorporated for precise refresh
 - ☐ Comprehensive installation and operation manual provided
 - ☐ Source listing for exhaustive memory testing included
 - ☐ Extensive dynamic testing during burn-in.
- Available in: 64KB [PDI 256-64]; 128KB [PDI 256-28]; 192KB [PDI 256-92]; 256KB [PDI 256-66]
- ☐ Field expandable up to 256K bytes
 - ☐ Guaranteed for 1 full year, same-day service
 - ☐ Nickel-plated bracket and card guide included

The PDI 256 provides up to 256KB of user memory with parity on a single expansion board for the IBM Personal Computer. Memory is organized as 4-64KB memory banks, each bank can be set to any 64K boundary within the 1 MB address space. Individual memory banks may also be deselected. All address mappings are made by DIP switch settings for easy configuration. All RAM chips are socketed to allow for easy memory add-on or replacement. Memory refresh for PDI series memory boards coincides with the planar board's refresh. No wait-states are required for expansion memory accesses. The PDI 256 is also available in 64, 128 and 192KB versions which are easily upgraded in 64K steps to a maximum capacity of 256KB.

Let **Babytalk** do the talking.

Babytalk is an intelligent communications management interface packed with features. In fact, it's a 64K Z-80 based microcomputer that plugs into your IBM PC to manage a full range of communications:

AS A TERMINAL EMULATOR,

Babytalk emulates 3270/bisync and 3270/SNA, 2770, 2780, 3770, 3780 BATCH BISYNC, and HASP/BISYNC and a wide range of ASYNC terminals including VT-52, VT-100, IBM 3101, and IBM 5251. It's KEYFIX utility automates your keyboard by defining function keys with any multi-keystroke sequence up to 80 characters.

AS A SUPERSMART MODEM,

Babytalk's onboard 300/600/1200 Baud auto-dial, auto-answer, direct-connect MODEM supports Bell 103, 202 and CCITT V.21 and V.23 protocol.

AS A SPOOLER,

Babytalk's serial or parallel port may be used for background print spooling, so that your IBM PC can run applications while Babytalk manages print output to either a serial or parallel printer. Babytalk also has a Realtime Clock/Calendar with battery backup for programmable message dispatching, and so that you don't have to set time/date each time your system boots.

Babytalk is from the same people who gave you Baby Blue. It's available for the IBM PC, the Texas Instruments Professional Computer, and other MS-DOS compatibles.

For more details see your computer dealer or contact Microlog at (914) 368-0353. Microlog, Inc., 222 Route 59, Suffern, NY 10901.

Innovative technology brings you quality color printing

for only \$599

The technology of the all-new Transtar 315 color printer revolutionizes color impact printing! Unlike old-fashioned printers needing multiple passes with pins to print color, the Transtar 315 employs an innovative 4-hammer print head to allow 7 colors and more than 30 shades to be printed in a single pass!

A unique 4-color diagonal ribbon maximizes the efficiency of the 315's color imaging and enhances its simple reliability. Built by Seikosha, the most experienced manufacturing company of the famous Seiko group, the Transtar 315 is available now and has been designed to be compatible with the IBM, Apple II/IIIe and Franklin personal computers. An optional PICS card also allows Apple and Franklin users to simply depress the 315's "copy" button to print any high- or low-resolution screen without exiting a program!

Transtar is bringing the technology of tomorrow to you today. Your future in color printing is only \$599 away.

CIRCLE 185 ON READER SERVICE CARD

Are computer salespeople insensitive, unhelpful know-nothings? Does John Q. Public expect too much? Come behind the counter where the answers to these and other urgent questions are revealed . . .

Counter Intelligence

It's almost guaranteed. Walk up to anyone banging away at a PC and bring up the topic of computer stores and you're likely to hear a big blue streak of invective that would make a dockwaller blush. The way many IBM PC owners tell it, computer salespeople are a full notch below snake oil vendors, used car dealers, and child molesters.

I recently bumped into an old friend on the street who had purchased a PC in the old days, back before micros greased the cover of every periodical in the country from *Time* to *Ms.* This was one cool, calm,

imperturbable customer, the kind who could giggle at situations that would have other men pulling out handfuls of their hair. Stress meant nothing to him; on being told that his wife had transferred his entire stock portfolio and his generous effections to a lounge lizard, he simply shrugged it off with a smile. In our circle of acquaintances he was known as "The Iceman."

We chatted amiably for a minute or two, and I innocently mentioned that my computer dealer had been giving me problems about one of my errant disk drives.

An astonishing transformation took place. His eyes narrowed to slits. The granite jaw jutted menacingly forward, lips curling into a sneer. His elabaster complexion took on the tint of a Harvard beet. He groped for words, but could only sputter, like a lit fuse, something about peripheral incompetibility and being stuck with single-sided drives and defective software and undelivered hardware and broken promises. Billows of steam hissed out of both ears. His steely 6-foot frame was racked with violent convulsions. The poor fellow dropped to the sidewalk and

The author trying his hand at selling PCs in Atlanta's Peachtree ComputerLand. In this sequence, he explains why it's not such a good idea to edit a WordStar document when the only command you know is Control-Y.

sobbed loudly into his open palms.

Nekkie Party

While in most cities such a display

WHILE IN
most cities such a
display would normally
draw a crowd of
gawkers, our fellow
New Yorkers simply
detoured around him.

would normally draw a crowd of gawkers, our fellow New Yorkers simply detoured around him. Several sneered at the inconvenience. One tossed him a quarter. I managed to lure him into a nearby bistro, where after pouring down enough gin to paralyze a Kodiak bear, he poured out a stinging tale of woe that had the other patrons ready to storm the glassy doors of the local computer store armed with pitchforks, straw torches, and a noose.

I was no stranger to the crass insensitivity of computer salesmen. While my own experience was no match for The Ice-man's jeremiad, I freely admit that most of my friends and I put our neighborhood PC vendors in a class with alimony judges and dog-kickers.

I'd been bitten by the bug a year or two ago when I found myself retyping the same stilted paragraphs ten or twenty times, each time yanking the offending page from the platen in a rachety rage, and in one fluid motion, crumpling and sailing it across the room at the empty refrigerator carton that served as my wastebasket. In an idle moment I happened across a glowing report penned by a writer who had just purchased a word processor. This awe-struck wordsmith was twirling on the hype with the effusive zeal normally reserved for pimply puppy-love letters.

Salad Days

I had toyed with computers years before, but my recollections were a hit fuzzy and altogether negative—faded memories of dropped and hopelessly randomized stacks of punchcards, unwashed nerds in flannel shirts with the buttons in the wrong holes who'd sneer if you

couldn't hard-wire programs with spidery jumper cables in the dark, and the terrifying, and all too frequent, cry "the computer is down!"

Still, there were times when everything clicked and the enormous Calcomp flatbed plotter spun out its intricate lissajous figures, or when the balky IBM line printer clanked quatrains of steamy computer poetry. Okay, so maybe I wasn't using it to figure out the area of a hypothetical intersection of 27 rods of different sizes passing through each other at different angles, but I did have fun.

So when I realized it was possible to buy a word processor and have a high-performance computer thrown in, all to oneself, no lines for terminals, no waiting 2 days for printouts, I dashed down to my local newsstand and cleaned out its entire stock of computer magazines. I'm a sucker for packaging, and like everybody else in the civilized world, have long felt that buying a typewriter from a company other than IBM was an act of temporary insanity. (Now, however, the IBM dual-pitch correcting Selectric II I thought I could never live without sits in a corner, shrouded in its funeral dust cover, its anachronistic gimbals and cams cranked into action only when I have to address an envelope.)

Since the choice between the TRS box with its pathetic graphics and drab gray box (honestly, how can a businessman buy anything from a computer company with the word Shock in its name?); the stuhby, toy-like Apple, which didn't even offer lowercase letters; and the classy IBM, was no choice at all, I emptied my bank account and scooted over to the single outlet of a computer chain that shall remain nameless, although it is the largest such chain in the nation.

I had spent several sleepless days drafting and redrafting my list of parts until I knew exactly what I needed. And since I was paying cash, and in my previous job had handled suppliers down to their knees, I was sure I could cut myself a sharp deal, maybe even hully and cajole the salesman into tossing in an armload of free software. With my sweetie and temporarily flat checkbook in hand, I breached the door, expecting a cordial reception from the salesman. I expected him to be happy to close this easy \$4,000 deal. After all, he stood to gain a lifelong customer whose friends would soon be swarming

into the place in such droves to buy their own systems that the sales staff would have to schedule visits from Brinks trucks on the half-hour to cart all the greenbacks away. I mean, IBM was a classy operator, and it would be scrupulously careful about the way it treated its customers, right? Two steps inside the place this naive reverie was shattered.

Down MemoryLand

An obese, menacing Harpy leaned over and thrust an enormous pinguid arm in my face. "Where do you think you're going? Waddya want?" As I opened my mouth half in astonishment, half in a frozen attempt to answer the question, she turned away to flail at the buttons of a telephone ringing off its hook as it flashed like

I WAS SURE
*I could cut myself a
sharp deal, maybe even
bully and cajole the
salesman into tossing in
an armload of free
software.*

a Christmas tree. "Pyutlan, hold . . . pyutlan, hold . . . no he can't talk to you right now, no I don't know when he will be available . . . don't you talk to me like that . . . service lines are busy . . . pyutlan, hold . . . I don't care if you have been waiting half an hour . . . no one can help you right now . . ." She slammed the receiver into its cradle as it blinked end jingled madly away.

"I want to b . . . b . . . buy a computer . . ."

"Yeah, sure, you and everybody else. Well you just gonna have to wait until a salesman can help you."

I looked around for a salesman. They were easy to spot. They were the ones literally running away from knots of anxious customers, each trying to ask a question, make a purchase, get an answer. I joined the smallest crowd, following a particularly arrogant salesman. As I recall, he was wearing a sharkskin suit and a pinky ring and had a bordello mustache, but memory

has a way of blurring details. He was mechanically fielding all queries with the identical line, "I'm sorry, I can't help you ... too busy ... come back when it's not so busy ..."

Chorus: "When is that?"

"It's always too busy ... sorry, can't help you ..."

I turned my attention to the plaintive pleadings of the customers. "Please, the system you sold me still doesn't do what you promised after 3 weeks ... All I want is the price of a monitor ... You didn't tell me that printer wouldn't work; what am I supposed to do? ... Can I just ask one question?"

Cold Feet

I wasn't exactly getting cold feet, but I wasn't feeling very confident about the place either. Still, IBM had that 24K-gold reputation, and I was sold on the system I had been chewing over for days end days. All I wanted was to hand the guy my check. Well, maybe another salesman. I wandered off to a different equally frantic group of consumers. The salesman was cemented in front of a PC. Questions were raining down on him. He had no answers.

"What kind of letter-quality printer can I hook up to it?"

"Will this hook up to my mainframe?"

"What kind of resolution on the color screen?"

The guy was obviously a greenie, and a bit pale. He flicked his gaze out to us for an instant and blurted out something like "Now, VisiCalc is a spreadsheet program that helps you with your business ..."

The relentless questions continued. The salesman sweating and constantly adjusting his tie, failed to field a single one of them.

"How does an IBM with a word processing program compare with a Wang-Writer?"

"Why does the IBM have such limited disk storage?"

"What kind of charting programs are available?"

The salesman hit the Enter key several times. Nothing happened. He typed something in. Nothing happened. He turned away from the screen and paled. "Now, there's a typing tutor, and there's a way to get this to show you mortgage payments, but I'm not sure how it works, but it also has a VisiCalc program, which can defi-

nately help you with your business ..."

I looked around. There were computers everywhere, but almost all of them were turned off. Parts and boxes were stacked helter-skelter to the ceiling. In one corner a middle-aged salesman was demonstrating some equipment to a well-acquainted pair of businessmen while fending off trash like me with the back of his hand and an occasional well-timed snarl. Two small urchins nearby were pounding their tiny fists onto a stained keyboard to add to the din.

A wild-eyed fellow my age walked up to me and asked if I was a salesman. I told him no, but he refused to believe me. "I know you're a salesman. I've seen you here before. I've been here a dozen times in the last 2 days. I know I've driven all the others crazy, but I can't figure out how to program the computer and I've had it almost 2 weeks! You've gotta help me!"

If this store had any decent competition, I thought to myself, it would be out of business in 2 days. More people spilled through its doors, some staggering under the weight of stacked up hardware they couldn't understand. Others tugged at the salesmen's coats. Everyone in the store was whining. "Puhleeze help me ..."

"I can't help you."

"Just answer one question ..."

"We're too busy to answer questions."

"When is the best time to come in when you aren't so busy?"

"We're always busy ..."

Busy Signal

Wait a minute, I thought, I'm not shopping. I'm not asking questions. I just want to buy. That shouldn't be too hard, right? I waited patiently until there was a momentary lapse in the frantic activity and then waved my checkbook in front of the sales-

live matron gave me a shot in the kidneys with something blunt and heavy. "Hey you, I've been here for an hour and a half already ... I was here first ..." The salesman backed away from us all. It was getting hot. It was getting very noisy. My kidney began throbbing. I summoned all my New York rudeness and blocked another salesman's escape route. "All I want to do is place an order ... can't anyone take my order?"

"Yeah, yeah, sure, just a minute ... we're awfully busy, why don't you come back ..."

I CAN'T
figure out how to
program the computer
and I've had it almost 2
weeks.

Three Stooges vs. IBM

So I left. Maybe it was the wrong time. I'd call up and find out when the slack period was and I'd even type out the parts and the IBM part numbers to make it easy. So I tried to call. And I tried to call. And I tried to call. And finally I gave up and went back down. And it was worse. I waited for over an hour again, and it was a shivaree. I half expected them to be shooting a stupid Jerry Lewis movie there, or maybe "The Three Stooges Open A Computer Store."

So I left the second time and stood outside, despondent, nose pressed to the glass, with checkbook held limply in my hand. A professional type with a little goat beard trundled up. "Trying to buy a computer?"

"Yes, why?"

"Same thing happened to me. I was in here four times and all I got were insults and rudeness. So I went straight to IBM."

"You mean IBM sells directly to individuals?"

Suffice it to say that IBM had just opened four product center offices inside New York banks (which meant salespeople went home at 3 p.m.) I sauntered into one during banker's hours and they were delighted to take my money. And even

AN ASTONISHING
transformation took
place.

man. "I know what I want ... who can take down my order?" The salesman didn't flinch. "Be with you in a while, we're really busy right now ..."

though their big Armonk computers hound me to this day about an erroneous hundred bucks they think I overpaid, my PC has me on cloud nine.

Computer Chic

Perhaps my chilling reception at that first store was just a circumstance of being in New York. I'm not entirely unsympathetic. IBM and everyone else spends a fortune promoting micros, and the population at large wants to see what all the fuss is about. The average schmoe, who has no conceivable need for a home computer, wants to tell his buddies he played around with one. "Sure, I seen a computah, I used one..."

And there are the customers who don't read the manuals and think you plug it in and it somehow runs your business like some omniscient, savvy robot speaking in a science fiction voice: "Now... hire... two... more... clerks... and... renegotiate... your... lease..." or who expect to master their system overnight. Or the ones who buy a serial printer and claim to know a secret way to hook it up to a parallel port, or who want something bizarre, like an interface to hook it up to a tractor engine and a toaster-oven. "But you told me it would run a gelding machine..."

I have to sympathize a bit with the folks on the other side of the counter. Aside from the clods who want to brag to their pals that they've toyed with a PC, and dolts who don't want to read the manuals, there are people who want model

uninformed back then that I could easily have bought my whole system in one shot. These days I know that mail order is a decent alternative when handled properly, and that local user groups can offer irresistible discounts across the board. But it still seems that a store should offer courteous, polite, instructive assistance. If there is too much traffic (can any store really have too much business?), then open branches, or hire more help.

Then there's the problem of help. Can any salesman smile after fielding abuse from dozens of abrasive New York types? Or spend an hour with someone who's

PC MAGAZINE
*wanted to find out if
customers were justified
in their complaints
about vendors and vice
versa.*

going to walk out with the hardware list you've just meticulously cobbled and proceed to the discount store around the corner? Can any salesman last at this miserable job dealing with a largely ignorant and nasty public when anyone with a decent knowledge of computers can lend a plumb of a job with a large company as a computer expert? Would you?

Does IBM Tell Gimble's?

It's finally happened—the total demythologization of the PC. They're hawking IBMs down at Macys. You can almost hear the bored elevator operator: "Third floor... ladies' underwear... fourth floor... pots... fifth floor... IBM computers..." Glorified video game computers fill the bins at K-Mart, and the word is that IBM's low end computer will be sold that way as well.

This has spawned an almost universal curiosity, and thousands of status-conscious consumers are now crowding into the stores and "just looking, thank you" to make sure the computer revolution doesn't pass them by. Most of these have no conceivable use for one, although an entire industry has sprouted overnight to cater to their invented needs with pack-

ages to inventory their libraries and wine cellars, pay their bills and remind them of appointments. Unfortunately for entrepreneurs, it's still easier to stick an important reminder to the refrigerator door. And anyone who needs a computer to balance his checkbook, will by definition have trouble with a computer—at least until manufacturers start making future models a whole lot friendlier and more forgiving.

Another problem is that computers are still fairly new, unstandardized, and difficult to cable together and boot up. Some people have trouble booking up even a stereo. Computer operating systems are a long way from being invisible and automatic. And there is much misinformation making the rounds, compounded by an unwillingness of most folks to learn before they buy. So you have weekend data-dobblers ordering a system unit from one store and the wrong drives and printer from another. "I know what I'm doing..." And then blaming it on the salespeople. "I know you warned me but you shoulda made it clearer..."

Counter Intelligence

What's it really like from the other side of the counter? Are purchasers generally ignorant or well-informed? Are borders of treddy browsers a problem? Do customers walk in the door knowing what they want or do they need to be told? What are they using their computers for? Are there many who shop for model numbers, then make their purchases by mail or from a local discount house?

PC Magazine wanted to find out if customers were justified in their complaints about vendors, and vice versa. But not in New York, the rudeness capital of the world, city of shrugged shoulders. So we trekked to Atlanta and set up shop in the two local ComputerLands, one in a wealthy suburb, the other in the heart of the city.

The two stores draw customers from all over Georgia and even from out of state. The suburban store has been in operation for about 5 years, the downtown store since August 1982. The suburban branch was the one of the earliest ComputerLands in the nation—the twenty-ninth store in the chain. There are now well over 300 ComputerLand outlets.

We spoke at length with the head of the suburban branch, Carol Andrews, who at

CAN ANY
salesman smile after
fielding abuse from
dozens of abusive New
York types?

numbers so that they can order hardware by mail. Later, they'll be back demanding support. Then there are idle adolescents, or husioesmen, reeling in after a five-martini lunch, who want to be entertained.

But I have to fault the store I visited. It kissed off a \$4,000 to \$5,000 sale. I was so

23 is probably one of the youngest computer store managers in the company. She admits that when she came to ComputerLand looking for a job, she was more inter-

employed a total of 40 people. She feels that her store is typical of most in the chain, though she freely acknowledges that different ComputerLands can "have different personalities."

One From Column A

Carol Andrews' particular store had what she termed a "very good sales volume last year"; she put its performance in the top ten across the country. Oddly enough, she doesn't own a computer herself. "I have everything at my disposal here during the day and I can stay here as long as I want. I play around with all the computers in the store for different reasons. I like the IBM and do most of my work on it because I find the keyboard and its function keys easy to use. A lot of the salespeople and I also like the Sony because of its advanced graphics editor. We all use the Fortune because it can handle Unix, and some of us think the future is in that direction. And we like the Apple for games. Each one can do different things and is attractive to prospective pur-

chasers for different reasons. It is fairly easy for us to select the proper one when a customer comes in and tells us what he needs."

According to Andrews, what distinguishes computer retailing from other types of merchandising is that people need a great deal of service and support.

C***CERTAIN**
customers call every
couple of minutes with
questions like "How do
I do a Diskcopy or a
Format?"*

ested in the fact that it was a successful retailing operation than in the merchandise it sold, but she has since been bitten by the computer bug.

She directly supervises six salespeople and one serviceman. There are three servicemen at the downtown store as well as six more salespeople. The two stores

snowballing.*

"Customers need someone to call when they have a question. Your 'fast food' type computer dealers cannot handle that effectively." Perhaps because of this,

A Store A Day

ComputerLand's planned worldwide expansion indicates rising interest.

According to industry-watchers at Futura Computing, sales of small computer systems costing \$1,000 or more may reach \$7 billion this year. Retailers are expected to grab half of this pie, with the balance going to mail order dealers, systems houses, industrial distributors, office products suppliers, and the more than 150 systems manufacturers themselves.

Future Computing puts the number of computer retail stores at 2,100. (Others claim there are as many as 3,000.) Over one third of all sales funnel through independent dealer networks. The largest of these is ComputerLand, with over 400 outlets in a total of 25 countries (it opened its 400th store, in Hong Kong, at the beginning of the year).

The Hayward, California-based retailer recently announced plans to open 275 new stores in this country in 1983 and another 20 overseas. Some of these will be smaller "satellite" stores, owned by existing ComputerLands, and located within several miles of the mother stores in shopping malls, college bookstores and depart-

ment stores. Satellite stores will specialize in non-business software and will carry a limited selection of home and educational computers.

The company's first franchise opened in Morristown, New Jersey in early 1977. There were 24 stores by the end of the first year of operation, and 382 by the close of 1982. Now ComputerLands now spring up at the rate of 10 to 15 each month, and in the next few months will open at the rate of one store per day. In 1981 the company grossed \$151 million; in 1982, \$451 million. This year it hopes to hit the \$1 billion mark.

A franchise costs \$75,000, but the total startup package, including rent, fixtures, inventory, etc. can cost between \$100,000 and \$250,000. Average sales hover around \$140,000 per month, up from the \$60,000 per month grosses of 3 years ago. Stores in some of the biggest metropolitan areas may gross as much as \$1 million per month, and \$8 to \$10 million per year; those in the remotest climates are said to pull in as little as \$500,000 per annum.

Each franchisee has access to over 5,000 products from more than 250 manufacturers, including 20 systems producers, although most carry only four to six main computer lines. In April 1982, Apple Computer decided it wanted final authority over which ComputerLand outlets could carry its products, and ended its long-standing arrangement with the chain's central purchasing arm. Apple subsequently made separate store-by-store agreements with 70 to 80 percent of the franchisees.

In the first few years of operation, ComputerLand's sales were divided fairly evenly between business and consumer products. At present, however, business purchases account for slightly more than 75 percent of the chain's gross. Company executives feel that the home, entertainment, and educational markets will be the areas of greatest growth in the years ahead.

One interesting note: According to W.C. Lowe, director of IBM's Boca Raton development lab, when IBM initially approached ComputerLand, the chain was not interested in carrying the PC. It took a personal demonstration by Don Estridge, General Manager of the Personal Computer Group, to make the sale. —PS

ComputerLand's service center will gladly service products purchased elsewhere.

Andrews says that 70 percent of her customers are men, mostly aged 30 to 50, who are "amazingly knowledgeable," which surprised her at first. "The average businessman has already read a number of computer books and magazines, and has done all the necessary homework before he walks in the door. Of course, we have to fill in homeowners who know they want to buy a computer, but want you to tell them why and what they're going to do with it."

Her business is divided evenly between single and multiple sales. Many business customers buy more than one, but this is offset by the large number of individual purchases for home use. Most of her multiple sales are relatively small. The most she says she's ever sold to one customer is about 100 units, and that was over a long period of time.

How Much Is That PC In The Window?

She characterizes her customers as being openly price conscious. "They want to know what they're getting for their money. They want to know if your prices are competitive with those of the other stores in town that sell the same product. There are four computer retailers carrying the same basic product lines within a mile of here. Atlanta's a hot city and new stores are just popping up like popcorn. There are at least a dozen now."

ComputerLand won't discount merchandise, but does publicize periodic specials. When we were there the store was giving away a choice of software worth 10 percent of the purchase price of the hardware.

Andrews' customers generally have no complaints about IBM's prices. When IBM announced its recent price reductions, she says, half her customers already knew about it and the other half were pleasantly surprised. Her customers get much of their information from business publications such as the Wall Street Journal and from computer magazines, and generally keep up-to-date with such developments.

She feels most of her customers are not impulse buyers. "When people, especially businessmen, visit us initially, they essentially know what they want. Most don't come in unless they really feel

they're going to make a purchase. Sure, some go to computer stores just so they can tell their friends they went down and played with computers," she admits. Andrews added, however, that most visitors to her store really want to buy a computer, but either aren't ready for the present generation of micros, or vice versa.

Heavy Traffic

"You can spot the browsers," Andrews noted. You do get some people who say 'Tell me all you know about computers but I don't want to buy one today.' The overall percentage of these is low, perhaps 15 percent. Most of them visit on Saturdays, which is our heaviest traffic day. People who come in during the week are almost all serious purchasers. About half know exactly what they want, and come in with a list written down. The rest drop by and say they want a computer and want to be told which one is best for them."

OUR STORE IS an absolute zoo on most Saturdays.

The computer that most people say they want to buy or at least look at is the IBM PC, and according to Andrews, this trend has been true since the PC was introduced. The store also carries Apple, Osborne, DEC, Sony, TI, Fortune, and others. She says that none of the others is moving up the list "at the speed of light, the way the IBM did."

Andrews claims the only programs most people have heard of before they walk in are VisiCalc and WordStar. "Customers usually come in and say, 'I'm interested in word processing, something like WordStar.' Then it's up to the salesperson to see what the customer's needs really are." Most businesspeople went either spreadsheets or word processors. One trend she's spotted that she finds curious is that businesspeople are a bit reluctant to commit themselves to complex accounting packages before they familiarize themselves with their systems.

Andrews feels that the hottest new area is at the low end of the market, the home

users. More and more homeowners are coming in and telling her they want a computer to keep their tax records and balance their checkbooks. At the other end of the spectrum are owners of large businesses who sometimes need more than a single micro. Under such circumstances she'll recommend a multi-user system like the Fortune. "Right now we don't see the IBM as a multi-user system, but there are more and more things coming out on the market that are heading in that direction."

A PC For the Teacher

The downtown Atlanta branch of ComputerLand boasts a far more modern and jazzy interior than its 5-year-old cousin. It has the standard ComputerLand showroom downstairs, and a relatively large service center and warehouse in back. But upstairs, its corporate offices share the floor with a large learning center housing 24 IBMs, a very unusual feature, according to the people who run the franchise. These are used for (very popular) introductory PC classes and advanced sessions on spreadsheets and word processing.

The classes each last 10 hours and cost \$125. Often to close a sale, however, store executives will throw in a class for certain customers. "Many of our first-time users take a class because they want to feel educated before they touch the keyboard." A very small percentage take a class before they buy.

One strict selling rule: salespeople are never told to "just sit someone down at a computer and let him play with it." The

**SOME COMPANIES
are starting to realize
that you need to have
something that a
customer can sit down
and go through by
himself.**

management expects all salespeople to "find out what the person wants to use a computer for, what his priorities are, how much he wants to spend, and then work

through it with him—show him one or two computers and determine what his exact needs are.”

But this is not always possible. Andrews feels that Digital has put together

***THE PEOPLE WHO
waste your time
represent only a small
fraction of all your
customers, although
they give a bad name to
computer retailing.***

one of the better customer demo packages, although she also gives high marks to IBM's new XT demo. "You can pull up information about any package that has the IBM label on it, read what it says about it, and print it out. The different manufacturers are starting to realize that you need to have something that a prospective customer can sit down and go through by himself. While you can't afford to ignore a customer, stores are often very crowded and salespeople in short supply. Our store is an absolute zoo on most Saturdays, and you just can't get to everyone as fast as you'd like to. So if you have something like a demo, shoppers can sit down and go through and get a feel for it."

Her store does not do any cold calling, although they're starting to expand into outside sales. "Most of our corporate accounts will call and say 'could you have someone come out, we're interested in a particular computer, please bring one and show it to us.'" Because of the demand, ComputerLand established a separate department geared to corporate needs, because "corporate sales can really pay off."

Something For Everyone

Andrews doesn't currently stock any IBM work-alikes, although she is looking forward to adding the Compaq to her stable of computers. "We just can't carry everything for everybody. We try to carry something for everyone's needs. If you already have an IBM, why have others that are like it, unless it's especially exciting

like the Compaq?"

On a typical day she sees just under a hundred people, although traffic starts building in September and increases until right before Christmas. She estimates that about 60 percent of her customers come in and say "I want to buy a computer and this is what I want."

"The people who waste your time represent only a small fraction of all your customers, although they give a bad name to computer retailing. But there is a small percentage of people out there who do not respect the fact that there may be a large crowd of people in the store, most of whom are there to buy something. It's more particular to computer retailing because you have to spend time with each person and explain things and get him up to snuff. You don't just say 'here's a computer' and leave."

"It probably takes two or three times before prospective purchasers actually order one. You can usually distinguish between people who want to learn so that they can make an intelligent decision and those who simply want to tell their friends 'I went to the computer store this week and they told me all about bits and bytes.' Time-wasters are not a serious problem right now, but I would take it to the bank that it's going to get worse as this thing starts snowballing more and more."

One of the things that they start the snowball rolling is the meteoric rise in school computer use. "It used to be 'my kid has orthodontics'; now it's 'my kid has a computer.' There's a good percentage of people who order computers for their kids—perhaps around 15 percent of all purchases by homeowners are made for their kids because they're reinforcing what they're getting in school. They're buying IBM's because they're so versatile, and because they can buy it for the kids and can also use it themselves around the house."

Losing Sales

Andrews claims that one of her biggest problems is that her salespeople are too honest. "If someone comes in and says he wants a certain computer and you talk to him about what he really needs and discover that he just can't get there from here, we'll consciously lose that sale."

She says that her long-standing policy "not to sell something to someone that's not going to do him any good," means that

returns are very rare. "But you do get an occasional customer who gets it home and simply finds it's not for him or that his wife won't let it in the house. So occasionally I will take one back, depending on the circumstances. It's on a case-by-case basis. A lot of times I won't."

When customers do bring back products, Andrews rotates the returned merchandise into the computer rental program. The store rents Apple, IBM, and Osborne systems to people who come into town and need one for a week or two. She doesn't rent to prospective buyers. "Anyone who rents has to have the software and everything ready to go." There's not yet much of a used computer market, but people do ask if used equipment is available at a discount.

***VIRTUALLY
all customers appear a
week or two after their
initial purchase to buy
computer games.***

"What Manual?"

One of Andrews' biggest problems is with customers who never even open the manuals. "Certain customers buy a unit but are afraid to start getting into it or reluctant to pore over the documentation, so they call every couple minutes with questions like 'How do I do a Diskcopy or a Format?' You have to tell people like that to look on a certain page in the manual—and do it without losing your patience. After all, they did just spend a lot of money in your store and you don't want to blurt out 'read the manual!' and bend up." Sometimes the salespeople suggest to such customers that they take the introductory class, which makes things easier for everybody.

"The trouble is that a lot of people think that by now computers are probably a snap to learn, and they don't like to have to read manuals. Instead, they want to be shown." The sales staff does show every purchaser how to turn his computer on and boot it up before he leaves the store, but many forget how to do it by the time

they get home. "Some people call every 2 minutes at the beginning and want us to take them through every step. That's a real problem for our sales staff. The other problem is the people who say 'I want to know everything about computers but I don't want to buy one.' Still, if you're patient and friendly, you might eventually sell people like that a computer."

Software availability is another problem. Andrews' store can stock only a limited number of programs for each make of computer the store carries. It's difficult for her salesmen to keep current on what new packages are on the market, let alone know how to operate all of them well enough to demonstrate them to new and existing customers.

When customers who buy computers to use solely for word processing or business recordkeeping start using them, they invariably discover how powerful they are, then rush back and want to buy armloads of new software. Or they read about new programs in magazines or hear about them from their friends, and come in expecting the store to carry every single one and be conversant in its use.

"It's very difficult to keep abreast of the thousands of products flooding onto the market and the new advances in technology, but we try to do it. It's almost like being a physician who has to stay atop the newest techniques in open heart surgery. Of course, that's a selling point over our competition."

User-Hostile Software

When she first got into the business, Andrews assumed that customers would complain about the relatively high cost of the software on the market, and is surprised that they don't. What they do complain about is a lack of user-friendliness. "We're seeing more and more first-time users buying computers these days, and they don't have the patience or the knowledge that hobbyists or experienced computer professionals have." But thorny manuals and programs are not affecting sales to any significant degree.

She finds it amusing that virtually all customers, including the most serious-looking businessmen who talk only about using their computers for complex financial analysis, appear a week or two after their initial purchase to buy computer games. They all want to know what the best games are and what will work on a

green screen.

The average unit she sells has two disk drives, a screen, and 128K RAM. Nobody buys single-sided disks anymore. And Andrews admits that the entire time she has been in the business, she's sold only one IBM with a cassette tape recorder for storage—and that customer came back later and bought a disk drive. She estimates that her average customer "just sort of wanders in" once a week to see what's new.

One reason customers visit so often is to shop for more software and add-ons. But the store also maintains a library of public domain software for Apple owners, with about 200 programs anyone can copy. She started a similar library for IBM users, but said no one contributed any software to it. "IBM users are a little more possessive of what they write."

IBM USERS are a little more possessive of what they write.

The store tries to keep IBMs in stock, but is often confronted by shortages of hardware and software, especially after a new product introduction. Andrews feels that one of the best selling points of the IBM is that you can book up products to it from so many different manufacturers. So if there is a shortage of an IBM product, a customer can often find something from another supplier that will do the job.

"It really drives us crazy when a hot item comes out and we can't get it. People call every day for weeks asking if it's arrived yet, which drives us up the wall. The waiting list for DOS 2.0 and IBM's new color monitor is phenomenally long—everybody wants them. And there are people on the waiting list who want to know where they are on the waiting list and how long they're going to be on the waiting list. That's the big bugaboo."

Uniformly Satisfied

There is no IBM product center in Atlanta yet, and Andrews isn't worried that one will open. "Customers may not be

sure they want an IBM and many want to look at a range of computers. IBM sells only IBM equipment. If consumers wanted to buy a non-IBM color monitor or a color printer they'd have to make the purchase here. And most want to buy from a store that can support the whole machine, so if their system is a mixture of IBM and non-IBM parts, we're the only place that can service the entire unit. Service is a good part of our business, and it's growing. The more hardware there is on the market the more service people will need."

Most people seem fairly satisfied. The complaints that come in, once users are up and running, are about things like noisy printers or having trouble switching back and forth between color and black-and-white monitors. "They're almost uniformly satisfied. We are very careful about setting them up with a system that will suit their particular needs, and most are very happy once they start using it."

Most prospective customers ask about IBMs and Apples, though Andrews says that more and more people are coming in to see the computer recently released by Sony. "It has very quick diskettes, small disk drives, and excellent graphics. And it's very compact, making it almost a portable unit. Apple has a very nice price. It's a smaller system, 64K, maybe 128K, and there's a lot of software out there for it, especially educational software, so it's great for their kids."

But IBM has been the most popular since the beginning. "Our sales pitch for the PC is based on the name IBM, the versatility of the machine, the flexibility of home and business use, the ease in booking up products from other manufacturers, and the overall image of quality and

*P***EOPLE EXPECT
us to be here all the
time, waiting for their
call.**

reliability. You're not going to have a lot of down time with IBM."

Hot Items

Andrews sees a big difference between

computer retailing and conventional merchandising. "Retail selling used to mean pushing hot items out the door, selling them fast, and turning over inventory as quickly as possible. Computer retailing, on the other hand, boils down to learning what a customer really needs, then trying to figure out whether we have what he needs, whether a particular system is the best one for him, and if he is going to have to spend more money than he was planning on spending to get what he wants. You can't just sell your hot item over the counter and throw it out the front door.

I HAD SOMEONE throw a box of diskettes at me one time.

Computer retailing is 90 percent customer relations. And the customer can't be forgotten once he has made his initial purchase. IBM makes it clear that it wants you and the customer to have a good long-term relationship."

While she acknowledges that hardware improvements are important, Andrews feels that the biggest problem—and growth—area is in developing better software. People often buy a computer and then come back and tell her about a specific problem and ask for software to handle it. But in most cases, the software needed simply doesn't exist. And if it did, it would be difficult for retailers to stock every last item.

"Vertical market software—packages written just for doctors, or lawyers, or engineers—is definitely going to be important in the future. There are a few good vertical packages out right now, but we don't carry any of them. The good vertical software—the packages professionals are going to buy—has yet to be written. So most professionals are limited to using conventional spreadsheets, database managers, and word processors, which isn't really ideal for them or us.

Horror Stories

"The real horror story for us is that people expect us to be here all the time, waiting for their call. They assume we don't go to lunch, or take off Saturdays. And when they call, they expect us to be instantly

available to take their call, which is often difficult. Most of the time we're either on a call with someone else, or with a customer, or trying to figure out a complicated configuration or pricing arrangement. People want to have answers to their questions right away, and can't understand it when we're tied up.

"And many of the calls are unnecessary. They'll call and say 'I'm working on WordStar and I don't know how to delete a character and my salesperson can't come to the phone and I'm really upset because I need to know the answer right this minute because I'm working on it right now.' The only thing that is worse is having to support other stores' customers this way.

"We're very happy to answer questions and tell customers how to interface peripherals or handle basic problems. We're proud of the product knowledge and the technical knowledge that we have here. That is one of our selling points for buying a computer from us. If somebody buys something somewhere else and calls and says he can't get his printer to work with his computer, and is desperate for help, how much support can or should we provide? We don't want to be the big bad meanie and say we're sorry we can't help because you bought it somewhere else. But we just don't have the staff or time to field such calls. And again, another of our faults may be that we help too many other people who aren't our customers. These days I try to get my staff to ask such callers who their salesperson was, which screens a lot of noncustomer calls. Supporting other stores' customers is difficult. On the other hand, if you are really knowledgeable and helpful, perhaps they'll come here next time they want to buy something. We get a lot of customers that way.

Motherboard Blues

"There are crazy questions all the time. It seems we're always telling people you can't get there from here. People sometimes come in and tell us they want to buy incompatible hardware like an IBM with a color graphics board and an IBM monochrome monitor. We explain that such a configuration won't work but some people insist they know a way to hook the two together. Do you sell it to the person or not? If you don't sell it to him, he'll probably go buy it somewhere else and then call us up and say 'I blew my mother-

board. I know you told me not to do it, but I blew my motherboard anyway. Now what do I do?' If he's not on warranty, he's in big trouble."

VERTICAL
market software—
packages written just
for doctors, or lawyers,
or engineers—is
definitely going to be
important in the future.

That kind of problem is atypical. A slightly more common one is when people come in who have no idea how much things cost, and expect to buy all the hardware, plus spreadsheet, word processing, accounting packages, and more all for \$600. But, Andrews adds, far more customers are surprised at how cheap everything is. "You get more people coming in expecting to spend \$12,000 who walk out stunned that they had to spend only \$5,500 to get what they needed.

"Once our salespeople learn about computers there is a danger that we may lose them. It's not a major problem right now but it is happening. Every computer company is searching for people with computer knowledge and experience. Just look in the Wall Street Journal classified ads. We haven't seen too much turnover yet, but I think it's likely in the near future.

"It is very rewarding when a person calls up and thanks us and says his new computer is the best thing that happened to him since sliced bread. It's also rewarding when a customer comes in and says, 'I was petrified to buy a computer and your salesperson was so helpful and put me at ease and got me up and running right away.'"

This makes up for the problems, and the way Andrews tells it, there seem to be few. I asked her the worst thing that has happened to her. "I had someone throw a box of diskettes at me one time because he had bought the wrong box of diskettes. He had bought it six months before and wanted to return it and I wouldn't take it

back so he threw them at me."

.45 Caliber Disks

Dodging an airborne box of diskettes is a far cry from contending with the madness in the Big Apple. In New York, they would probably throw something a bit more sinister.

What are the lessons here? First, if you're a businessman, especially one who is buying several systems, you're made in the shed. Computer stores will cater to you, even send a salesman to your office.

What if you're not a rock-ribbed capitalist tycoon? For best results, do your

homework. Read all about it. Know what you want ahead of time, or at least specifically what you need a computer for. Visit your computer store during the week, at e

Introducing I.B. Magazette

Our Magazine On Diskette Increases The Value And Usefulness Of Your IBM Personal Computer By Building Your Program Library.

IB. Magazette is a bi-monthly magazine/user's group on floppy-floppy diskette. We provide up-to-date knowledge and hands-on experience. As a national user's group, we are a regular, dependable means of program and information exchange.

Each issue contains detailed step-through tutorials, programs, utilities, hints reader contributed material, even music and games. Always included is a major program or demonstration versions of commercially available software. This alone is worth far more than our subscription price.

To join, fill out the subscription form and send it to us with your check or money order.

I. B. Magazette is a completely new form of communication, a way to increase the value and usefulness of your computer by building your program library.

Your initial issue is just \$15. Subsequent issues are only \$10 each with return of the diskette. Back issues are available at \$15 each.

Send your check for \$15 (money orders only for foreign orders) to:

I.B. Magazette 1306 Petroleum Tower
Shreveport, LA 71101

NAME _____

ADDRESS _____

IF YOU'RE A businessman, computer stores will cater to you, and even send a salesman to your office.

time when it's bound to be relatively uncrowded. Don't go during lunch hour or at the end of the day or the week and expect the red carpet treatment.

It's been said that an IBM PC franchise is a license to print money. And stores like ComputerLand are not offering handsome discounts. So they can't be hurting all that much. You'd think they could hire enough help at least for crowd control on a busy weekend.

Still, they have problems with us too. Browser who waste their time. Computer industry companies who snatch their best salespeople. Purchasers who refuse to read the documentation. Know-it-all customers who insist on buying systems that won't work. Products that force salespeople to educate their customers end that cannot be sold right off the shelf like microwave ovens.

It's really academic. In a year or two or three, computers will be standardized to a far greater degree, easier to hook together and operate, smaller, and more self-contained. There will be mountains more of software, including better demo software. Computer stores, which still have a high-tech mystique, will be as commonplace as bakeries, and computers will be sold in every department store and appliance shop. It's already happening.

If you need to buy a computer today you have several choices—dealing with the manufacturer, going to a computer chain, ordering by mail or even through a users group or the company you work for. And if you don't like the cut of a particular computer store's jib, just walk around the corner. But don't take it out on the poor salesclerk. It might be me. /PC

WHY SPEND MORE ?

TK ENG. introduces a quality IBM* compatible RAM + SERIAL I/O + GAME I/O board, at the aggressive price of [redacted] with 64K RAM. Expansion capabilities to 256K RAM can be installed at [redacted] per additional 64K RAM.

256K RAM

A 64K to 256K parity checking RAM is fully socketed for easy memory expansion. The memory address is switch selectable, using up only the required memory space.

GAME I/O

Interface consisting of two joy-sticks and four switch inputs are IBM BASIC compatible. A standard GAME I/O DB15 connector provides connection to the rear plate of the IBM computer.

GOLD IBM INTERFACE

Gold connectors as well as glass epoxy PCB will provide years of reliable service, with all hardware interface meeting the IBM specification.

ASYNCHRONOUS COMMUNICATION

A RS232 and 20Ma (TTY) interface supports software programmable baud rates, parity, stop bits, and character. Modem and serial printer are fully supported by the IBM communication software. A standard DB25 connector allows for the easy connection to serial devices.

KIT BUILDERS — You can save even more with the bare PCB at only \$79.95.
COMPARE QUALITY, FEATURES AND PRICE — THEN CALL TK ENG.

WE TURN YOUR IBM P.C. INTO A SMART TERMINAL.

You don't really need to get your hands dirty to turn your IBM PC into a **DEC VT100** and **VT52** compatible intelligent workstation. All you need is **VTERM**, Saturn Consulting Group's terminal emulation software. **VTERM**'s features include full **VT100**

keyboard and video emulation, throughput to 9600 baud, printer support, and PC-Host file exchange, in addition to the standard capabilities of an asynchronous communications package. Call or write today. Our software mechanics are standing by.

One way or another, the computer system of your dreams may be within reach—perhaps just for a few weeks, but perhaps forever.

LEASE, RENT OR BUY? (AND WHY)

You know what you want.

You've had your eye on that IBM PC for quite a while now. You've stopped by every dealership within a 50-mile radius, asking questions and testing systems. You've devoured the magazines, the technical pamphlets, the ads.

You also know what your dream system costs, hardware and software together, down to the penny. You're willing to wait a while for a few of the games, and you'll get the less-than-most-versatile spreadsheet program. But unfortunately, even selling off one or more of your less endearing relatives would leave you just about \$3,636.28 short.

Closing out your savings account or selling your stock in Bonzo Metals Corp.

to pay cash isn't the only way to get your computer, peripherals, and software. It's time to consider a realistic range of financing options that could move that PC out of your dreams and onto your own desk, temporarily or permanently. We'll explore the possibilities of leasing or renting, how to borrow the money to buy a system outright, and the tax implications of each option.

First, it's necessary to understand the difference between a lease and a rental. A lease is a long-term financing plan under which you make periodic payments; you may end up owning the system at the end by exercising a buy-out option. A rental is a short-term arrangement that generally builds no equity in the system. Both differ

from direct purchase, under which the system is yours from the start, even if you need to borrow money to pay for it.

Why Lease?

Leasing a system is both like and unlike getting a home mortgage. In both

LEASING
*will cost you more, in
the long run, than
buying the system
outright.*

cases, you make regular monthly payments for a fixed number of years. In both cases, the cost of borrowing the money is built into the payment schedule. But there's a key distinction: with a mortgage you own the house and the bank holds a lien. With a computer lease, you don't own anything, unless and until you pay off the balance under a buy-out option. The leasing company is the registered owner during the life of the lease.

It's important to recognize a financial reality from the start: Leasing will cost you more, in the long run, than buying the system outright. This is because you're buying a system and borrowing the money to do it.

So who leases, and why?

"The biggest advantage to leasing is if you don't have the capital up front," observed Joseph A. Leubitz, director of management advisory services for the Chicago certified public accounting firm of Checkers, Simoo & Rosser. Or you may want to lease in order to keep your bank line of credit open for another purpose, such as obtaining a loan to meet your end-of-year obligations. Or, as Ann Marie Vitale of H.V. Fuoding Inc. in Wappinger Falls, New York, put it, "Some people can't go to their bank for various reasons."

Leasing has become more popular as home computers proliferate. Edward Viocont, who operates three ComputerLand stores in the Pittsburgh area, estimates that 20 to 25 percent of his customers are leasing. Sonny Moosson, owner of Boston's Personal Computer Leasing Corp.,

said the majority of his customers are businesses and professional individuals, including lawyers, architects, and accountants. Vitale said her firm leases only to commercial and professional accounts (although there is no requirement that they be incorporated).

Howard Axelrod of the New York State Consumer Protection Board advises "doing some internal introspection" before deciding whether to lease, buy, or rent. If you're planning a system for business or professional use, Axelrod says, three major factors should be considered.

Growth in business. Will the system you want be sufficient for your future needs? A high-growth enterprise, such as a consulting firm, may find today's system inadequate 5 years down the line. On the other hand, a lawyer who obtains a system now to handle billing, accounts, and legal records, and to prepare briefs and letters, will be less likely to outgrow his system.

Technological advances. In a business with rapidly advancing technology, direct purchase or a long-term lease could lock you into equipment that may become obsolete for your professional purposes; a short-term rental may be more appropriate. What wouldn't be a problem for the owner of a small boutique could be a costly oversight for an engineer.

Cash flow. Consider a young doctor, fresh out of residency and opening a private practice. He has to buy medical equipment and furnishings and pay a support staff. The landlord is demanding rent and a security deposit. Monthly payments are due on 8 years' worth of college and medical school loans. There simply isn't any money left over to buy a \$6,000 microcomputer. Leasing makes sense here, Axelrod said.

If you want a PC or PC-XT primarily for personal or educational use, some of the same considerations apply. But under such circumstances, said Axelrod, you should consider another factor: the equipment is unlikely to generate enough additional income to offset the financing and interest costs. The 18 to 20 percent you may be charged under a loan or lease will probably be more than the same money would earn in the bank.

Retailers usually don't provide leasing services themselves. Although you obtain

your system through them, they're intermediaries between customers and leasing companies. If you're interested, your dealer may refer you to several leasing firms. You may get some approximate costs from the dealer as well. Viocont said, but arrangements must be made between the customer and the third-party leasing company.

"It's more of an accommodation to the customer," said Kenneth R. Waters, vice president for development at ComputerLand's corporate headquarters in California. Waters said ComputerLand franchise holders offer leases if they want, but the majority go through banks, regional leasing firms, or national leasing companies. "Less than 5 percent have their own leasing," he noted.

Leasing companies compete among themselves for referrals from vendors. In fact, it often doesn't matter to the companies what kind of system you get and they may not learn precisely what equipment you obtained until they get the invoice. From their perspective, there's rarely a need to even see your computer—unless the system is repossessed for nonpayment or you decide not to exercise the buy-out option.

Software is normally part of a lease package. At one time, leasing companies restricted the value of the software because it has little residual value to them. Today, such limitations are not often included, or are not enforced.

The typical life of a microcomputer financing lease is 2 to 5 years, although some firms lease for as little as a year, according to Joel G. Heimlich, vice president of America's Equipment Leasing Co. Inc. of Pittsburgh. The length of time is

YOU CAN
*choose among several
purchase options when
you sign your lease.*

negotiable—"whatever the customer feels most comfortable with," Heimlich said.

You can choose among several purchase options when you sign your lease. Only when you exercise your option do you become the legal owner of the system.

According to Ann Marie Vitale, virtually everyone in her firm's experience does end up purchasing the equipment.

You can decide to buy the system for a nominal amount (usually \$1) or for a stated percentage of its original value (usually 10 percent) or for its fair market value (usually 15 percent to 20 percent of the purchase price). The option you pick will affect the amount of your monthly payments.

Whether there's an advantage to buying out early depends on the specific terms of your contract and the point at which you want to buy out. For example, Monosson said, Personal Computer Leasing agreements include a fair market value buy-out provision. A customer who wants to exercise it near the end of the lease, say in the last year of a 3-year agreement, can do so by paying for the residual value. If the customer seeks an early purchase—say, one-third through a 3-year term—then the company would negotiate a buy-out price and apply 50 percent of the lease payments toward the final figure.

H.V. Leasing does it differently. To reach a final price with an early buy-out, the firm will calculate the fair market value and then add the amount it would have earned through financing for the balance of the term. Under such a plan there's no financial saving with an early buy-out, although the customer may have a larger tax write-off for the buy-out year.

Leasing doesn't change the terms of the warranty on hardware or software; 90 days is 90 days. Evaluate your need for a maintenance and service agreement on the same basis for a lease as you would for a direct purchase. The leasing company may offer to include a service agreement, for an additional monthly amount. Note that the leasing company may require you to insure your system, whether under a business or homeowner's policy.

Run to Rent?

There are several reasons to consider a short-term rental. You may need equipment immediately to meet a deadline while your own system is being repaired. You may not have enough money to purchase right away. Or you may need a computer periodically, but not often enough or for long enough to justify investing in your own system. Rentals could be appropriate for a small business that does an annual or twice-a-year inventory, or for a lawyer

who prepares tax returns 3 months each year.

Rentals also let you test a system or a

RENTALS
*have been relatively
scarce so far.*

particular configuration before you make an investment. "Try it out. See what you like," counsels the Consumer Protection Board's Axelrod. "Even though it may be pretty expensive, before making a commitment to a system you could discover that a smaller one will be more than sufficient for your needs."

Rentals have been relatively scarce so far. Companies are reluctant to invest in a lot of expensive equipment that could sit idle on their shelves for months, gathering dust and becoming obsolete. And at least some potential customers for short-term rentals may not be considered the most worthy credit risks.

Waters described rentals as "very rare" and said he was unaware of any ComputerLand franchise-holders that offer them. Viocent, whose three ComputerLands don't offer rentals, explained the reluctance of retailers to offer rentals. "One of the typical requests we get is from a Ph.D. candidate who needs a system for 6 weeks to complete a dissertation. What am I going to use for security? How would he secure it if he has no money? Do I give it to him on good faith? Hardly." Also, the dealer could end up with a piece of used equipment whose lost value exceeds the income from the rental.

However, General Electric has stepped into the breach, offering rentals of a few days to a year to length. "It's a major thrust for us this year," explained GE marketing manager Edward G. DeMarco. Although GE has been in electronics instrumentation rentals for years, its emphasis has been on the engineering and technical market. But the company decided it was time to get into the home computer field as well. "The market has just exploded," DeMarco said.

GE has the PC, PC-XT, Apple II, IIe and III, and Hewlett-Packard HP85 and HP86, with other models expected, at seven cen-

ters around the country: Schenectady, New York; Fairfield, New Jersey, (serving the New York City area); Atlanta; Houston; Los Angeles; Chicago; and Detroit.

One GE customer is a private school in New York City that gives students an introduction to personal computers, DeMarco said. The school gets the systems for 5 days at a time, "and it's cheaper for them to rent than to buy." Another client is a software house that uses rental equipment to develop software for industrial use on PCs.

Not surprisingly, a rental is more expensive on a monthly basis than a long-term lease or a direct purchase. The shorter the rental period, the more you'll pay proportionately. The base monthly rental for a PC with 64K and one drive is \$250. A monochrome monitor with adapter will cost \$90, while an Amdek Color 2 monitor with color/graphics adapter is listed at \$130 a month. The monthly rate for most software packages runs from \$20 to \$70. For \$625 a month, GE will put together a system that includes a PC with two disk drives, an Epson MX100 dot matrix printer, an Amdek Color 2 monitor, and a software package with word processing, accounting, and business analysis capabilities.

GE offers standard discounts based on the length of the rental. For example, there's a 10 percent deduction off the list rates if you rent for at least 3 months. The discount climbs to 20 percent for a 6-month rental and 40 percent for a 1-year rental.

You can also rent for less than a month. If you keep the system for fewer than 7 days, you'll be charged half the monthly

repairs. While these are your responsibility with a lease or purchase, GE takes care of them for rental equipment. Another difference is the purchase option, which is generally standard in a lease but may be negotiated with a rental. With a GE rental you can choose, when you sign your agreement, to apply a percentage of your rent payments toward the purchase price.

Some retailers are expressing concern about the competition from rental firms, although Waters said, "So far it hasn't hurt. The stores always have the option to rent if they need to. It's one way they have to compete."

How To Borrow

To buy your PC outright, it may be necessary to borrow part of the purchase price. If so, time spent shopping around for the most favorable interest rates and repayment terms could save you money.

When asked about interest rates for a personal loan that would be used to buy a \$5,000 to \$7,000 home computer system, loan officers at several banks quoted annual fixed rates of 15.75 to 19 percent for periods of 2 to 4 years, (subject to change). These rates allow for more flexibility than is apparent at first.

One bank said that the loan would cost us 19 percent, unless we became "preferred" customers (by opening a checking or savings account with at least \$1,000),

which will entitle us to 17 percent. As a careful consumer, you should consider whether the money you're required to put into a checking or savings account to qualify for the lower rate would earn you more money elsewhere, advises the New York State Banking Department.

Another bank offered a ¼ percent reduction in its regular rate if monthly installment payments are deducted directly from your checking account (thereby letting the bank collect its money sooner). Most of the banks said their rates don't vary by the length of the loan.

For examples of how much you'd pay for installment loans at various rates, Figure 1 lists monthly payment schedules for \$4,000 and \$6,000 loans over 3-year and 4-year periods. The interest rates are given in ¼ percent increments. By multiplying the number of monthly payments by the amount per payment, you can calculate the total interest you will be paying. For example, a 3-year, \$4,000 loan at 16 percent will cost \$1,062.68 interest, while the same loan at 19 percent will cost \$1,278.32.

In addition to asking about rates and preferences, find out whether the bank will insist on holding a security interest in your computer system. One loan officer said her bank has the discretion to do so. If the bank does use the computer as collateral for your loan, it means the system may be seized if you stop making payments.

GE OFFERS standard discounts based on the length of the rental.

rate. The bill is 80 percent of a month's rent for a 7-to-14-day rental; you'll pay for a full month for a rental of 15 days or more.

One major difference between a rental and a lease or purchase becomes apparent when a system needs maintenance or

Ask about late charges, life insurance requirements, and penalties for paying the loan off early. And make sure to get a complete Truth-in-Lending disclosure statement.

YOUR company could be another source of an interest-free loan.

ment, outlining the annual percentage rate and the total cost of your loan. Depending on your credit-worthiness, the size of the loan and the completeness of your application, the approval process generally takes from 24 hours to a week, according to loan officers.

If you belong to a credit union, check on loan rates there as well. Members can often borrow at lower rates than would be charged by neighborhood banks.

You can use your credit card to get a short-term, interest-free loan if your dealer will accept the charge card for at least partial payment. Depending on billing cycles, you'll usually gain from 2 weeks to 2 months before you have to repay. You avoid interest charges if you repay by the deadline. Be careful, though. Some retailers impose a surcharge—generally 2 to 3 percent—on credit card sales, which will cost you more than you'd save on a month's interest.

Your company could be another source of an interest-free loan. A certified public accounting firm in Albany, New York, offers loans of up to \$2,000 to employees who use the money to purchase microcomputers. The firm told its staff that it believes the home computers will help increase their professional capabilities. There's no interest charge, and the loan is repaid over an 18-month period through payroll deductions.

Write-Off Rights

Whichever PC route you choose—direct purchase, lease, or rent—Uncle Sam and most states can help. In fact, the tax advantages or disadvantages of each option can prove to be the deciding factor when you're ready to buy, lease, or rent.

Less for Your Money

If you do word processing on your personal computer, you probably know that there are many programs for sale to help you with your spelling. But the biggest spelling error you'll ever make is paying too much for your spelling correction software.

The Random House ProofReader gives you less for your money—less trouble, that is, and fewer spelling errors. The Random House ProofReader is based on the world famous Random House Dictionary. It contains up to 80,000 words, depending on your disk capacity. You can add new words with the touch of a key. It shows you the error and the sentence it's in. It instantly suggests corrections. It even rechecks your corrections. And it costs half as much as other programs with far less power. The Random House ProofReader is compatible with all CP/M 2.2®, MS-DOS® and IBM Personal Computer® systems.

CIRCLE 130 ON READER SERVICE CARD

some combination—affects its tax shelter potential. Further, the tax treatment of your expenses varies, depending on whether you buy, lease or rent.

First, let's consider what happens if you purchase your system outright, for full or partial business use. It doesn't matter whether you do so by dipping into your

savings account, by getting a bank or credit union loan, or by borrowing some money from a rich uncle. According to William Bush, a tax specialist with the New York City law firm of Reavis & McGrath, your main benefits are the right to an investment tax credit, the right to depreciate your costs over the life of the comput-

er, and the option of treating up to \$5,000 as a one-time business expense. Let's consider these in order.

You are entitled to a 10 percent investment tax credit on the cost of your system, excluding any amount you "expense." (For a discussion of expensing, see "What To Tell The Taxman," PC, Volume 1 Number 9, page 375.) The credit is subtracted directly from the amount you owe the feds. This would amount to a \$600 credit on a \$6,000 system.

For depreciation purposes, a computer generally has a 5-year lifespan under Internal Revenue Service guidelines. The IRS has set up a schedule for depreciation: 15 percent the first year, 22 percent the second year, and 21 percent in each of the following 3 years.

A rapid write-off provision of the law, known as Section 179, now authorizes you to expense up to \$5,000, in a single year, of the cost of business-related equipment. Any amount over what you expense is available for the investment tax credit and can still be depreciated. If your system cost \$7,000 and you choose to deduct \$5,000 as a one-time business expense, you're entitled to a \$200 tax credit—10 percent of the remaining \$2,000.

Changes in federal law, which will take effect this year, mean that you will have to make a choice about how to handle depreciation if you take the credit. To keep the full \$200, you must reduce your basis of depreciation by 50 percent of the investment tax credit. In this case, this means depreciating \$1,900 (\$2,000 minus \$100) over 5 years. Alternatively, to benefit from the full depreciation, you are allowed only an 8 percent tax credit. Using our exam-

FOR depreciation purposes, a computer generally has a 5-year lifespan under Internal Revenue Service guidelines.

ple, this means that the maximum \$200 credit would be cut to \$160, while your depreciable base would remain \$2,000 over 5 years.

What happens if you lease? Your lease payments are deductible as business expenses for the year in which you pay them. Whether or not you can depreciate depends on the specific terms of your lease. However, you don't get the Section 179 expensing privilege if you lease, according to William Bush.

In addition, a lease does not automatically entitle you to an investment tax credit, although this can sometimes be negotiated with the leasing company. "Since the credit is worth something, it may mean the lease rate would be adjusted accordingly," said Bush.

Computer consultant Luebitz noted that it's up to the leasing company whether you get the credit. "If the lessor takes the credit for itself, it can pass on the savings." You may be able to get your financing rate reduced if the lessor keeps the credit. He added that an investment tax credit is of no value to a business that is reporting a loss for income tax purposes.

Heimlich said American Equipment Leasing customers are given the option of taking the investment credit, and most take it. His firm, however, generally won't give a lower monthly payment rate to customers who don't want the credit.

Rental payments are deductible as business expenses, but do not carry any investment tax credit or depreciation rights.

While federal tax write-offs provide the greatest benefits, you may find similar, if smaller, extra savings if you live in a state that imposes its own income tax. Bush recommends reviewing the federal and state tax ramifications of your contemplated purchase, lease, or rental with your own accountant, lawyer, or other tax adviser.

Even if your system won't be used for business, you still may be eligible for some tax breaks, Bush said. If you itemize deductions on your income tax return, you can deduct the finance charge portion of your lease payments, or the interest you pay on your bank loan.

Short as you may be on capital, the computer of your dreams may still be within reach—and those unwanted relatives can breathe more easily. Assuming that's what you want. If not, a swimming pool is nice to have. Or a new set of golf clubs, or...

HIGH RESOLUTION GRAPHICS + ADVANCED COMMUNICATIONS = Frontier Technologies Corporation

The IBM System Support Company Brings You: PC And XT Compatible Hardware And Software

The first company that offers: 1024x1024 Resolution Intelligent Graphics Controller Board

The first company that offers: X.25 Software on our Advanced Communications Board

The first company that offers: Multifunction Memory board with THREE year warranty, 8K memory option and **LOWEST PRICES**

HARDWARE SUPPORT

- High Resolution Color Graphics Board, 1024x1024 resolution, NEC7220 controller, local 8088 CPU for high level primitives, 16 colors from a palette of 4,096 colors. Ideal controller with affordable price for:

- Executive Graphics, CAD/CAM, VIDEOTEX, and vertical markets.

- Advanced Communications Board: Dual channel, Bsync or Async operation. HDLC/SDLC, and X.25 protocol support. Real time clock and parallel port option.

- IEEE-488 controller. Real time clock and RS-232C options.

- Multifunction Memory Boards 8K, 64K, 128K, 192K, and 256K. RS-232C, real time clock and parallel port options. Three year warranty.

LOWEST PRICES.

SOFTWARE SUPPORT

- Graphics Package (GRAPHPACK™) User friendly High level commands for applications software.

- X.25 software Level III protocol support, HDLC level II support.

- Communications Package (COMPACK™) Menu driven modes Async, Bsync, 1200 baud operation.

- IEEE-488 Bus Manager Functional commands to control the bus devices.

- Medical Office System. Allows up to 40 physicians in a group. Billing, schedules, records and word processing functions.

Call for unbeatable prices. Dealer inquiries (domestic & overseas) invited.

PC Ventures over the meadow and through the woods to interview the young co-owner of a successful PC mail-order house...

Down By The Old Mill Stream

Dawn by the old mill stream in Marlowe, New Hampshire (population 500) sits an unassuming little wooden structure. No neon signs mark the doorway, no great expanse of glass exposes an expensively decorated showroom. In fact, the only real clue to the goings-on at 6 Mill Street requires a sharp set of eyes. In the boss's space in the parking lot is a white Saab with license plate "IBM-PC."

Marlowe, whose only other industry is an underused lumberyard, is the home of PC Connection, a mail-order house specializing in software and hardware for the IBM PC. There, in a former mill, is the receiving end of the "800" toll-free telephone line advertised in PC Magazine and elsewhere. Out back near the stream is the loading dock where trucks bring in the latest peripherals and take away each day's outgoing shipments.

Recently, PC Executive Editor Corey Sandler visited PC Connection and interviewed David Hall, co-owner (with Patricia Gallup) of the company.

PC Connection was not chosen because it is any better or worse than the dozens of companies offering wares by mail. It was chosen because it was dawn by the old mill stream.

PC: Tell me about Marlowe, New Hampshire.

HALL: Well, it has about 500 people, I'd say, and it's supposed to be the icebox of New Hampshire. We were lucky to get this building. The bank had owned it for 2 years, before we got it. There was actually

a pond in this room when we took it over. The people here are farmers, loggers, and there are people who work in either Newport or Keene, both about 16 miles from here. There are also a lot of unemployed.

PC: Do any of them have any concept of what is going on in this building?

HALL: Same of them work for us. But I don't think there are too many people in town who have computers or even know about them.

PC: So you don't get much walk-in business?

HALL: Not from Marlowe. No.

PC: You got into this because you bought a PC for a company you own called Audio Accessories, right?

HALL: Yes. Audio makes telephone jacks, miniature and full size, and we sell them to people such as NBC and OpryLand—people looking for a quality jack and who are willing to pay a little bit more for it. PC: Why did you feel you needed a PC?

Down by the old Mill Stream. The PC Connection offices are located just off camera in this view of the Ashuelot River. David Hall, kneeling on the loading dock, points to the remains of an old horizontal water wheel.

What was the purpose of the computer in your business?

HALL: Standard business things like bookkeeping. I'd seen people using computers and decided that we should get one. When the IBM PC came out, it seemed as though it was going to be very popular and would generate a lot of software to support it.

PC: So you came into the business as a user?

HALL: Right.

PC: Why do you limit yourself to selling IBM-related products?

HALL: We want to offer good support on the things we sell. If we had five or six different kinds of computers, I think the support wouldn't be as good. By limiting ourselves to IBM products, we can know them well enough to answer the questions people ask about them.

PC: You think IBM products are sufficient to sustain you?

HALL: Right now they are. Many new mail-order companies are starting up, and they'll probably cut into some of our business, but we're not trying to be a multimillion-dollar company. It's just a comfortable thing to do, and unless the business fades out we'll just stay with IBM. We're making some money. Last year was tough and go, but this year we are okay.

PC: Why should a PC user buy something from you rather than going down the street to a ComputerLand?

HALL: If ComputerLand gives them the service they want, they should buy it there. If they want to save some money, then they can try mail order. I'm sure a lot of the ComputerLands out there are doing a good job of support. Some of the people we speak to are calling us because they didn't get support from some local retail store. On the other hand many people will buy only locally at retail stores because they didn't get the support they expected from mail order.

PC: What do you do to help the consumer?

HALL: I hear this word support and I don't really know what people are looking for. If someone wants us to take him through every step of 1-2-3, that's a lot to ask. If they call here, we help them as much as we can. Let's say someone buys a board, gets it home, and then realizes he doesn't know what he's doing. If he calls us on the phone, our technical man will

The distinctive license plate on David Hall's car, here parked by the entrance to the PC Connection offices.

step him right through the whole installation, tell him how to set the switches and make sure he's happy. That's my idea of support.

PC: What kind of an inventory must you maintain? Do you keep on hand most of the things you offer, or do you have to order from other sources?

HALL: We generally stock a good supply but we sometimes run short of certain things such as disk drives. There's a big demand for them, and they've been difficult to get.

PC: What kind of a person buys from a mail-order operation? Are they more knowledgeable? More adventuresome? On a tighter budget?

HALL: All different types. Sometimes it's someone who just wants to try it. They've bought a PC and they read about mail order and have seen our ads. They'll buy something small to see how fast it gets there and how good the service is. Some businesses need a dozen multifunction boards, and they'll come to us for price. I think it's just all different types.

PC: Do people call up prospecting for information rather than to buy?

HALL: Yes, sometimes. Someone once called and asked if a particular product could be used with one disk drive. We were a little unsure of that and asked him if he had contacted the manufacturer. He said he had, but the manufacturer was unsure of it too.

PC: What about service and warranties? If I buy a disk drive from you instead of from the IBM Products Center, what can I expect when the head crashes?

HALL: Anything you buy from us we guarantee for 30 days. But if you buy a

disk drive from us on 49 days from now it malfunctions, we'll still take it back. After a long period, you have to pay a fee to have something like that repaired. Ninety days is typical warranty period on the Tandon drive. This is the same as IBM offers. It's still cheaper to pay for the repair than to pay for a service contract.

PC: Suppose I buy a board from you, and it just doesn't do what I want it to do. It's not broken, I'm just not happy with it.

HALL: You can always send it back.

PC: How often does that happen?

HALL: Probably about once every 2 days someone will return something he decided he just didn't want. I've come to expect it. It's understandable.

PC: What about software? If someone calls up on the phone and says, "I want a word processor," and you send him a product and he just doesn't like it, what can you do for him?

HALL: We try to avoid selling someone a product if he isn't familiar with it. If someone calls up and says, "I want to buy a word processor," and we send it to him, there's really nothing we can do once he's broken the seal. Depending on the circumstances, we might take software back on a credit basis, but generally speaking, if someone buys software and opens it, he owns it. The most we can do is warn our customers before they buy, which we always do.

PC: So you're hinting they should go down to their computer store and look at it.

HALL: I was hinting that they go down to their Users Group and talk about it.

PC: What do retail computer stores think of your operations?

HALL: One store manager said that he thought that mail order fits a certain niche. Certain people are going to buy from mail order who wouldn't buy from retail. He didn't feel we were competing with him. Other stores, I'm sure, do object because they regard mail order transactions as lost sales.

PC: What are your principal costs of operation? How much does it cost to have an incoming "800" phone number?

HALL: It's fairly expensive.

PC: Several thousand dollars a month?

HALL: Yes, about that. And advertising, of course, is a big expense. Incoming freight, outgoing freight. Our outgoing freight charge is just a flat \$2 for anything

other than a heavy item such as a monitor, drive, or printer. So if someone buys 16 pieces of software it still costs him only \$2.

PC: You must have put a bit of bulge in the United Parcel Service route here in Marlware, I imagine.

HALL: I think they're still driving the same van, but with Audia and PC here together, they occasionally have to make an extra trip for shipments.

PC: When someone calls Marlware, New Hampshire, who answers the phone?

HALL: Could be me, could be one of the salespeople, could be one of the girls in the office.

PC: If I call up and tell you I'd like to run laboratory instruments with my PC using an IEEE-488 output and I'd also like to have an articulated robot arm, am I going to get someone who's going to say "huh?"

HALL: In a case like that, we generally suggest that they call someone like Tecmar. That's a little out of our area. We sell to people who are looking for standard software packages and more-or-less-standard products.

PC: How would you suggest that someone go about choosing a mail-order house?

HALL: If I was going to buy something by

mail order, I would make a few trial purchases of some small items and see what happens, and then narrow it down that way. If you're going to buy one thing, you're more or less hit or miss, but if you're going to spend \$1500 to \$3000, buy a couple of things from a couple of places to see what the service is like. Call back for some support on something. Call and ask questions and see what the people know.

PC: What about checking the Better Business Bureaus?

HALL: Yes. People have called here and asked for our bank references. A lot of people call us on the recommendation of friends. But, it's a good idea to check with the Better Business Bureau if you're concerned. Most people don't seem to be that concerned, though. I think if they see you advertise for a period of time, they feel more comfortable.

PC: Obviously, advertising is critical for a mail-order house. What is your advertising philosophy?

HALL: We want to focus on the fact that we deal only with the IBM, so that when somebody orders something from us far his IBM, he knows he's not going to wind up with an Apple version.

PC: What happens if someone calls you up

and says, "I see 'Super Duper Calc' advertised at \$350, and you're selling it for \$351." What's your reaction to that type of call?

WE WANT TO focus on the fact that we deal only with the IBM.

HALL: Well, I can understand someone trying to get the best price that he can. Usually when we offer a price, it's the price that we can give them, and generally there's no room for negotiation. Everyone in the mail-order business seems to have a few things that he can buy cheaper than anyone else. I'm not sure why. Either he's buying a large volume or buying through someone else who's got a good discount. Sometimes we'll suggest, "Go to them and see."

PC: The general range of prices to a retailer from a wholesaler is about 40 percent all list price, is that about right?

HALL: Correct.

PC: So all mail-order houses are in most instances paying about the same price?

HALL: I think the larger mail-order houses are paying less. When they've been in business for a while, they can negotiate with either distributors or the manufacturer and commit themselves to a large volume for a longer period of time. That gives them a little bit of an edge.

PC: Have you ever shipped a color monitor in a well-padded box and had it arrive squashed down to the size of an envelope?

HALL: Not too often. But once we sent a game to Canada, and it came back crushed to just about half size. For some reason, it was returned before it even got to the person who ordered it. Most deliveries seem to be handled pretty well by UPS.

PC: Have you been offered products that you just refuse to sell?

HALL: Well, no one has offered us any, but there are products out there that we would refuse to sell.

PC: Are there boards out there that don't work?

Audia Accessories and PC Connection share space at 6 Mill Street. Here, David Hall, taking care of business for Audia Accessories, examines a plug-in board for audio devices.

HALL: There have been. I don't think there are many now. It isn't a question of the quality of the product; it's what the product is. There are a lot of software products with nothing behind them that we couldn't sell because people wouldn't be happy with them. Hardware-wise, if it's something new from some new company, we'll check it out. If it looks good and if it seems to be well-planned we'll sell it.

PC: There are some mail-order houses that sell PC computers they've obtained through the so-called "gray market," without IBM's authorization. PC Connection does not. But, should a wise consumer consider buying a complete computer set up through the mail?

HALL: That's really a personal decision. I think that if I lived in a town and wanted good support and I didn't know much about computers, I would want to buy the computer from my local store. But I think some people go to their local stores only to find that they know more than the salesman. That discourages a lot of people. Besides, there's not that much that goes wrong with PCs. We haven't returned any of ours, and we've had some of them for over a year.

There is a risk. It seems as if the more a person is concerned about what's going to

happen, the more likely that person is to have a problem. I don't know why.

SOME MAIL-order houses sell PC computers they've obtained through the so-called "gray market."

PC: Do you know of any instances where a second-party manufacturer puts out a board that is vastly superior to the IBM product?

HALL: No.

PC: An async board is an async board?

HALL: Yes.

PC: And a parallel port is a parallel port?

HALL: Right. That's about all there is to it. But let me tell you about one manufacturer who makes a board that has two output

pins missing on the async board, pins that may never be used. But another manufacturer has included them, and he's pushing his board because it has all the things IBM has.

PC: Do people ever want to buy things that are silly or just unnecessary? For example, has anyone wanted you to help him put a million bytes of memory in his machine for games and word processing?

HALL: Not quite that bad. We do get people who ask for software that isn't really what they want. If someone asks for a product we'll try to find out what he is trying to do and make a recommendation.

PC: If someone were to call up and say, "I'm about to buy a bare-bones PC and build it up," what would your advice be?

HALL: Well, if he wanted to build it up to a reasonable level, first of all, we'd suggest that he not buy a single-sided drive. I think it's a waste when for just another hundred dollars or so he can get a dual-sided drive. We'll ask him, first of all, what he's going to do with the machine. Almost everyone wants a multifunction memory board of some sort. We'll try to steer him to one that's right for him. Another thing people ask about is chips. Some people want to have ceramic chips. They've heard from their friends that you've got to have ceramic chips! If they want them and we have them, we'll be

happy to sell. Ceramic is slightly more expensive. I always tell them, "You know we keep track of how many bad chips we've gotten since we started business. We have four bad chips on the shelf out there, three are ceramic and one is plastic."

THERE ARE people who think that we're the best mail-order company and there are we're the worst.

PC: You talk a good line about your own company. But, some people believe that there are mail-order operations that are not honest, well-run operations.

HALL: I think there are very few mail-order places that will take somebody's money and deliberately steal it. But we hear all kinds of stories. There are people who think that we're the best mail-order company they've ever heard of, and there are people who think we're the worst. We try to keep the latter in a more minority.

A list of computer mail order houses follows this article. /PC

David Hall logging in a phone order with the help of one of the office PCs.

CIRCLE 146 ON READER SERVICE CARD

Buying and selling computer products isn't as simple as black and white. Are discounts from "unauthorized" dealers worth the implied sacrifice in service and warranty? Could be . . .

The Gray Market: Shady Middleman Or Sterling Friend To Consumers?

"Unauthorized" sounds kind of, well, unauthorized. Not sanctioned, not quite legitimate, maybe not on the level. Something to stay away from.

"Gray market" sounds even less authorized than "unauthorized." Just a few shades away from "black market."

But there's nothing illegal about the booming computer gray market. Its existence is obvious, and its product supply sources are an increasingly open secret. It's all legit and aboveboard.

Most dealers handling computer lines on an unauthorized basis would agree with the one who contended that "what we do is only shady as far as IBM corpo-

rate goes." Many insist that, in terms of product availability, maintenance, and other back-up services, they do just as good a job as any authorized dealer can.

Indeed, for a while after the XT came out, nearly the only store in New York City that could supply it was an unauthorized dealer, 47th Street Photo. And one West Coast dealer who sells via the mails noted that his operation allows "a lot of people in remote areas to buy the machine even though they're not near a dealership."

Tracking the Suppliers

Where do the gray market dealerships get their products? Mostly from other,

authorized retailers; and this includes the IBM Product Centers in the case of IBM equipment.

In fact, IBM would probably deny it officially, but when we jumped into the phone booth and changed into undercover consumer, we talked to a service rep who said, "there are a lot of (unauthorized) dealers who are buying their machines from us. If they buy in large quantities they can get good prices."

Some unauthorized dealers are shy about exposing their suppliers, especially their current sources. "We wouldn't want to say where we get them," said Bob Wabster, half-owner of American Small Busi-

FILE TRANSFER PROGRAMS

TRS  IBM PC or XT
 APPLE  IBM PC or XT

Transfer your TRS Model I, II, III, 4, 12 or 16 files to the IBM PC or XT.

Transfer your Apple II, II+, or file files to the IBM PC or XT.

- No more retyping or wasted time
- Fast transfer—data rates of 110-9600
- File concatenation supported
- Send files of any length
- Make \$\$\$ — the IBM PC is new and software is scarce—take your "new" programs and sell them for \$\$\$
- Transfer ASCII files, random files, text files, data files, binary files, high level language programs (Basic, Pascal, Fortran, Cobol, etc.) electronic spread sheet data, word processor files, etc.: If all gets transferred!

The File Transfer Program comes complete with all instructions, hardware and software (for both machines)

CIRCLE 369 ON READER SERVICE CARD

ness Computers in Pryor, Oklahoma. "We have several sources." In the past, Webster said, "we have bought some from IBM and the Sears Business Centers."

In New York City, Brian Glasser, a popular figure at local PC users' groups, and owner of Greenwich Village Computer, said "I used to be the Fifth Avenue Product Center's biggest customer."

Glasser's sources also include authorized retailers who need cash and order for him. "We pay cash up front," he said. Glasser has some of his bigger customers, including universities and banks, buy the basic IBM machine. "Then we popluta it up for them. What we're selling is system enhancement."

Most manufacturers' contracts include clauses forbidding transshipment. But in practice, the computer makers can't really stop the steady stream of goods from the authorized stores to the product-hungry resellers. Some of the stores may actually not know that they're moving machines into the gray market; after all, anyone who walks into a store can buy what he's got the money for. Certainly it would be difficult for a manufacturer to prove that the store knew where the merchandise was going.

Usually, the authorized retailers sell to the unauthorized ones to help clear out unsold inventory and get some immediate cash flow. They may also deliberately place larger orders than they actually need: they can resell the extra supplies to an unauthorized store, with both dealers getting the benefit of the discounts that come with high-volume orders. Some unauthorized dealers operate on a smaller scale, buying a few machines and peripherals and designing systems for customers on what amounts to a turnkey basis.

The unauthorized shops worry about IBM and other manufacturers cutting off their supplies by shutting down the transshippers. They know they have to advertise to get customers, but the idea of an article upset some of the people we tried to talk to. "The quieter we are, the better," one said. But there are risks for the computer makers in any crackdown.

Guerilla Warfare

For one thing, there's the chance that dealers whose contracts are canceled for violating the transshipping clauses might counterattack by charging the manufacturers with restraint of trade. IBM, after its

various monopoly battles of recent years, is probably well aware of the risks involved in confrontation.

If the computer makers were really serious about cracking down, their likeliest course of action would be to discontinue volume discounts. So far, no company has shown any interest in doing that. Most manufacturers would probably prefer to continue the current state of guerrilla warfare, invoking less drastic measures.

Why? There's the sheer size of the gray market, and the computer market as a whole, to consider. Shutting down any authorized dealer is shutting down a sales channel. Shutting down the gray market dealerships also means a significant loss of sales.

No one really knows how many unauthorized dealers in the United States are selling the IBM PC and equipment from other manufacturers; most likely, there are at least a hundred of them. Whatever the number, they account for hundreds of millions of dollars in sales at the retail level. This is a significant share of a market which is rapidly nearing \$7 billion.

In short, as one of the unauthorized PC dealers put it, "they have good reasons not to stop us from selling their machines."

So Why Aren't They Authorized?

If these dealers do so much business for the computer makers, why aren't they authorized? The reasons vary with the dealership and the manufacturer.

IBM has set stringent financial, training, staffing, maintenance, and sales ap-

THE COMPUTER makers can't really stop the steady stream of goods from the authorized stores to the resellers.

proach standards as conditions for getting a PC contract. In its first retail venture, the company is anxious to provide a high level of user satisfaction, which it feels is most assured by requiring a high level of

dealer performance.

Some dealers can't meet the financial standards IBM has set for granting a dealership. Others may not have adequate staffing. And anyone selling mail order is out, since IBM demands face-to-face contact between customer and salesman. There are even requirements dealing with store appearance.

Brian Glasser is pretty sure that his Greenwich Village Computer decor would not satisfy Big Blue's idea of interior design. "We don't have a real floor—it's underflooring, with no tiles. Until we expend we won't be able to do much with decor." Half-jokingly, he added, "We have the name 'Greenwich Village' and we live up to it." Glasser is equally skeptical of his ability to meet IBM's capitalization requirements, even though he does about \$3 million a year in sales.

But many of the larger unauthorized dealers could certainly meet the finance and store set-up requirements, and some have actually applied to IBM for the PC contract. The biggest hurdle most face is their mail-order business, and many question IBM's position on this.

"They're wrong in certain ways regarding mail order, but then there's a lot being done wrong," one unauthorized East Coast dealer said. "IBM worries about us not providing the services a regular store would provide," another mail order dealer said. "But not every store is teaching the customer to really run the computer."

SOME DEALERS
*can't meet the financial
standards IBM has set.
Others may not have
adequate staffing. And
anyone selling mail
order is out.*

Actually, suggested Bob Webster at American Small Business Computers, there's a kind of self-selection process going on. "Most people who buy from us know how to use the machine. They know what they want in equipment; they want the cheapest price, and they don't need

support. Most people who don't know what they want will go to an authorized dealer and get the help." Webster has applied to IBM for authorization. "If we get it we'll stop the mail order business immediately," he said.

Low prices are one of the main attractions offered by some unauthorized dealerships, especially the mail order houses. They can sometimes charge 10 percent or so less than many authorized outlets.

But not all, perhaps not even most, of the unauthorized stores are that much cheaper. Glasser, for example, is adamant on that: "we do discount, but not excessively. And we don't discount IBM pieces as such. We discount a total package consisting of IBM and other equipment."

Risky or Respectable?

Even when there are substantial price differences, some people don't feel secure enough about their computer literacy to buy from unauthorized stores. One recent PC buyer bought from an authorized dealer because of his worries on that score, even though he could have, in this case, saved a considerable sum at a nearby unauthorized store. Eventually he needed help getting a program to run. The people he had bought from gave him no problem. He came to realize, however, that all they did was call the software writer—something he could have done on his own, and in fact did. By the time his problem was solved, he had put as much into the effort as the dealership had.

Which, of course, is part of the point many dealers make, whether they're authorized or not on particular equipment.

"If people want to learn computers, they should use them," one dealer said. "Everybody learns from his own mistakes," said another. "Our people learned all the machines we sell without going to classes. They helped each other."

The manufacturers, in supporting their contract dealers and attacking the gray market, do emphasize the need for support and maintenance. When people at the IBM Product Centers were asked whether it was "safe" to buy from particular unauthorized stores, quite a few of them reacted very negatively.

One service rep at IBM did say he didn't think there'd be any problems, and that he hadn't heard of customers having difficulties at a particular store we mentioned. But salespeople at different Prod-

uct Centers insisted that the unauthorized outlets weren't providing support, were supplying the wrong cables and peripherals, or worse. "They're selling the box that says IBM with other people's memories and peripherals!" said one.

MOST PEOPLE
*who buy from us know
what they want; they
want the cheapest price,
and they don't need
support.*

But so do many authorized dealers. There are many boards out there that are cheaper than IBM's, that do more and take up less space in the machine. And names like Tandon and CDC have become pretty standard in disk drives.

"A person can't put together the best possible system from IBM parts only," said Glasser, who specializes in PCs and PC compatibles and work-alikes. "There's always something weird, something different, something that IBM doesn't make, or doesn't make quite as well."

Training the Gray Marketeers

A growing number of the unauthorized IBM dealers have begun providing maintenance and training. It's not always internal, so it doesn't meet IBM specifications, which require technicians in the store. But in many instances it does fulfill the company's intentions regarding support.

Many unauthorized IBM stores offer some kind of 90-day warranty to match the one IBM provides through the authorized dealerships. Some require that the machine be returned to the store.

Readiness to provide support varies a great deal among the many unauthorized retailers—as do standards of pre-sale help and information. But many computer buyers have found this to be true of the authorized stores as well. The buying decision rests with the consumer; most dealers, whether authorized or unauthorized, would say this decision should be based on after-sale support and maintenance as well as on price. /PC

B. Dalton BOOKSELLER

THE SOURCE FOR COMPUTER BOOKS

BRADY BOOKWARE has answered your call! Peter Norton, highly-acclaimed author of Norton Utilities, offers an unprecedented look at the "inside" workings of the IBM PC in a new Brady Bookware text so widely acclaimed it's already been excerpted into three of the most popular computer magazines on the market—even before its own publication! Here's the text destined to become "the bible" for PC users everywhere!

You will discover the magic that makes the IBM PC the premier microcomputer for ready, knowledgeable users like yourself. You'll learn the fundamentals behind the Intel 8088 microprocessor (the "brain" of the PC) as well as the "insides" of the PC-DOS operating system with clear explanation of how DOS really works. Also includes:

A The inside workings of diskettes, with programming examples on how to decode intimate information about diskettes

A An introduction to ROM with complete coverage of the service routines provided by ROM

A Plus—an introduction to Assembly and Pascal languages, and a concise section that explains the connection between them!

Also available, the *first and only* book on IBM PC assembly language programming.

IBM PC Assembly Language Programming
by Leo J. Scanlon

IBM PC Assembly Language Programming introduces you to the principles and intricacies of microprocessors, numbering systems, and assembler.

It begins by outlining the steps necessary for creating and running assembly language programs.

You'll explore the standard techniques for multi-precision arithmetic . . . sorting . . . sound generation (even music!) . . . graphics . . . and lots more. You'll get the inside look at BIOS, the PC's "chief administrator." And knowing BIOS means you'll save hours of programming time!

If you're ready to go beyond BASIC order your copy of **IBM PC Assembly Language Programming** today!

Amazing! This was Printed on an Epson

by The *Fancy Font*[™] System from SoftCraft

Letter Quality

Say good-bye to correspondence quality and hello to *Fancy Font*'s high-resolution, proportionally spaced, letter quality. *Fancy Font* provides fonts in sizes from 8 to 40 points; styles include Roman, Bold, Italic, Script, Old English, and more (see samples below). All this on low-cost Epson MX and FX printers.

Create Your Own Characters

You can use over 30 font sets in the *Fancy Font* package and furthermore, can create any new characters or logos you like, up to 1 inch by 1 inch. A database of over 1500 characters is included in the package.

Font Style and Size Samples

(actual size)

8 point Roman 10 point Roman 12 point Roman
18 point Bold **18 pt. Sans Serif**
18 pt Italic *20 pt. Script*
20 point Old English

Easy-to-Use

Fancy Font is a *software* package for CP/M and IBM PC compatible systems; no special hardware or installation is required. With *Fancy Font* you use your favorite editor or word processing package to create a file to be printed. Include as few or as many formatting directives as you desire. Then use *Fancy Font* to print your file.

Numerous Applications

Fancy Font customers are constantly discovering new applications. For example:

- Business and personal letters
- Custom forms, invoices, labels, signs
- Foreign Languages
- Mathematical Notation, Greek
- Super- and Sub-scripts
- View Graphs
- Custom Letterheads
- Resumes
- Articles for publication
- Entire newsletters, brochures
- Complete manuals, cover-to-cover
- Advertisements, including this one
- Invitations, place cards

Introducing DataKeep™...

The new data management program that interfaces with other personal computer software to do more things easier.

Now small computer users can have an easy to use, comprehensive information management capability from Mathematica, the company already known for its IBM mainframe RAMIS II® software.

DataKeep can become your core module for creating inputs to the best IBM PC-DOS or MS-DOS software available. Calculate information using your data base, then instantly transfer it to word processor, spread sheet, graphic, or statistical analysis programs.

While conceptually similar to integrated software packages, such as 1-2-3™ or MBA Context™, DataKeep offers you much more. A true data management program, it satisfies the demanding requirements of larger data files and routine processing tasks.

And DataKeep is extremely easy to use. It is specifically designed for non-computer professionals, and comes with a complete primer.

To integrate all your software with DataKeep, see your local computer dealer. You may also contact Mathtech directly by calling our toll free number or mailing the coupon.

THE CASE OF THE MISSING WINGTIP WIDGET

Solved...with the simple genius of the RL-1 Relational Database.

The night clerk's digital watch showed 2:35 a.m. when the red desk phone interrupted his inventory updates at the IBM PC. It was a double ring. An outside call. Williams sensed trouble as he punched line 3.

"Worldwide Widgets, Williams here."

"Walla Walla Widget Works," came the reply. "One of our widgets went."

"What type?"

"Wingtip."

Williams winced. Worldwide hadn't made a wingtip widget since way back when.

"We wouldn't have a wingtip widget at Worldwide, Sir. They're obsolete."

"If we don't get one by Wednesday," the voice wailed, "we're wiped out."

There was one chance. The RL-1 Database Management System. If he could track down the last time a Washington dealer had ordered a wingtip widget...

Williams was no programmer, but that didn't matter. Turning to the computer, he put the question to RL-1 in simple English:

```
Select DEALER, QUANTITY, DATE  
from INVOICES  
where PART EQ "WINGTIP WIDGET"  
and STATE EQ "WASHINGTON"
```

Within seconds, Williams had his answer. A dozen wingtips went to Wally's Widgets 6 years ago. But would Wally have any left?

Yes! Waking Wally was well worth it. The last wingtip widget

in Wally's warehouse was on its way to Walla Walla.

Who? What? Where? When? Why? RL-1 knows.

Give your micro the power of RL-1, and you'll be able to handle data like a master detective. Without mastering BASIC or COBOL or FORTRAN or any other mysterious language.

Once the RL-1 floppy disappears into your disk drive, you're armed with a complete relational database management system. And that means life at the computer is going to be a lot simpler from now on.

Independent minded.

The secret of RL-1's genius is *data independence*. Instead of locking data into programs, you create *independent* databases. So different programs can use the *same* data. And you can get at day-to-day information without expensive reprogramming. Or wading through reams of redundant data.

Case in point: standard programming packages. Like accounting, for instance, or inventory control. Most are fine for what they're programmed to do. Beyond that, even the simplest questions can leave them without a clue. Whether it's searching through invoices for missing widgets. Or looking for customers with too much debt. Or finding the address of your aunt in Vermont. Conventional programs just aren't smart enough.

Enter RL-1.

So easy, the butler could do it. It's a different case with RL-1. You'll DEFINE exactly how you

want your information stored. Dollar signs that "float." Dates that look like "July 17, 1983," not "07/17/83." Numbers that are decimal, integer, or real.

Then you'll input data easily with a full-screen editor. Or LOAD in batch directly from ASCII files.

Now use RL-1's Query Language. Ask your questions in English. Get your answers in seconds. Include high-level math—even statistics—in your line of questioning. (Programmers can tap RL-1's genius through its Program Interface.)

As your data changes, you can UPDATE and DELETE whole files with a single command. Or edit item by item with the Relational Editor.

A motive to get cracking.

The sooner you get started with RL-1, the sooner you'll be cracking your own tough cases. So here's a little "nudge." Order RL-1 from your dealer or ABW by July 31, 1983. And you'll receive a coupon good for a free Report Generator Application Pack. \$75 worth of extra genius that'll make short work of your lengthiest reports.

RL-1. It takes the mystery out of managing your data. Available for your IBM PC DOS or CP/M system for \$495, suggested list. Call or write, and we'll clue you in on all the facts. ABW Corporation, P.O. Box M 1047, Ann Arbor, MI 48106. (313) 971-9364.

**RL-1
RELATIONAL DATABASE.**
The simple genius.

CIRCLE 127 ON READER SERVICE CARD

ABW

At two o'clock in the morning, when most of the country's asleep, and the phone rates have gone down, my computer is talking to our offices all over the country ... all by itself.

With Transporter, my computer can send and receive files — anything from documents to BASIC programs to VisiCalc reports — late at night, after I've gone home for the day, and after long distance rates have gone down.™ That saves me time and money.

It does all that without anyone here to help it. I just make up a list of things for it to do, and go home. Transporter does all the rest. It "wakes up" at the appropriate time, dials up other CROSSTALK or TRANSPORTER systems, and transfers the files I want. It can even dial up a remote printer, and print files for me. And it does it all with complete accuracy. When I come in the next morning, Transporter gives me a report of what it did, and at what time it did it.

I like it because it frees up my time during the day. The boss likes it because it saves an our phone bill. (The cleaning ladies are still trying to figure it out.)

Transporter — an exciting new idea in microcomputer communications from Microstuf, the creators of CROSSTALK. Ask your local dealer about it.

The Communications Software People

For the IBM personal computer. Requires 96K RAM, two disk drives, PC-DOS, Hayes Microcomputer Products Stack Smartmodem or Smartmodem 1200, IBM Asynchronous communications interface, or equivalent RS232 interface. Communicates with any system running CROSSTALK, TRANSPORTER, or other compatible programs.

Transporter, CROSSTALK and Microstuf are Trademarks of Microstuf, Inc. VisiCalc is a Trademark of VisiCorp. Stack Smartmodem and Smartmodem 1200 are Trademarks of Hayes Microcomputer Products, Inc.

CIRCLE 326 ON READER SERVICE CARD

Introducing DataFax...the easy way to tame your Data Monster.

If you deal with information, you're probably dealing with a Data Monster.

He's that mass of notes, Scribbled messages. Phone numbers. And all the thousand-and-one other important pieces of information you have floating around your life.

But with DataFax from Link Systems, you can keep your Data Monster under control—plus have a lot more power over your information than you ever thought possible.

Unlike most "data manager" software programs made for your IBM PC DataFax doesn't care what your data looks like. Or how long it is, how many items it has or what you want to do with it.

The power we've programmed into DataFax makes it as simple and natural to use as a pencil and paper. You can fill up a screen with anything you want—even information already stored on disk. Then cross-reference it as many different ways as you'd like—by a date, a species, a customer's name, whatever.

So when you need that information, DataFax will retrieve it in a way that's meaningful to you. The powerful keyword function allows you to get information out as quickly and easily as you entered it. And DataFax is the only software of its kind to let you expand from flappy to hard disks, so it will never be obsolete.

If getting so much power for so little effort seems too good to be true, send us the coupon and we'll send you all the details. Or see your IBM PC computer dealer and prove it to yourself—before your data situation gets any hairier.

DataFax tamed me!

LINK SYSTEMS

Because whether you've got a monster of a data problem—or just a small one—DataFax can tame it.

I want to tame my Data Monster.™

IBM is a registered trademark of IBM Corp.

Simply powerful software that links it all together

Dot Matrix Printers

Since an IBM PC can drive almost any parallel printer on the market, software compatibility is critical. The larger your software library, the less likely a given printer will work with everything. It's a process of elimination. So if you're just beginning, choose software before you choose hardware.

Remember, too, that no printer is 100% compatible with the PC except the PC printer—Epson, Gemini & Mannebaum Tally printers are the next best things, respectively.

EPSON

FX, MX & RX

The **MX-80** set new standards for dot matrix printers years ago. IBM graded it with their logo. Nevertheless, Epson has resubmitted the product line. The **FX-80**, a Prowriter competitor, features 180 cps, a correspondence font & a new body (tractor is optional). The **MX Series** is being phased out & the **RX Series** will replace it. Call for the latest version & the best prices.

G. ITOH

Prowriter

This printer is a major contender. Reviewers laud the **Prowriter's** speed (120 cps), the buffer (1.5K), character sets (8 fonts) & graphics (180x144 dpi). It's the printer of choice for several major OEMs. The **Prowriter 2** has the same specs, but in a 136 column format. Because delivery is slow nationwide, the **Prowriter** has become "The Printer Worth Waiting For."

Prowriter 2 \$399.00

Prowriter 2 \$734.00

STAR MICRONICS

Gemini 10/15

Gemini printers have been getting a reputation—a good one. At 100 cps,

with 120x144 dpi, 5 fonts (w/italics) and a 2.2K buffer, it's a match for both the Prowriter & the Epson (it's Epson code compatible, too). Gemini comes with tractor & uses plain spool ribbons. The **Gemini 15** is the 136 column version.
Gemini 10 \$336.00
Gemini 15 \$499.00

OKIDATA

Microline Series

We use these printers in our offices. **Microline 82As & 83As** are data crunchers with 120 cps and optional dot-addressable graphics ROM. The **Microline 82S & 83S** are text processors with 160 cps draft mode, a 40cps correspondence mode & the graphics included. The **Microline 84** combines full graphics & speed (200 cps) with exceptional performance (we use the 84 to print our invoices).
Microline 82A \$418.00
82A/82 Textor \$59.00
82A/83A Graph ROM \$46.00
Microline 83A \$876.00
Microline 92 \$524.00
Microline 93 \$654.00
Microline 84 \$1024.00

MANNEBAUM TALLY

MT-160 L

The **MT-160 L** is the newest of the correspondence quality printers. It has speed (160 cps), 8 fonts, parallel & serial interfaces, tractor/tractor feed, plus menu-driven installation for easy set-up from the control panel.
MT-160 L \$788.00

We sell other dot matrix printers, including the Anadex Series, Centronics Series & DS's Prism Series. Call (603) 881-9855 for technical details. For prices, or to order, call (8 30) 343-0726.

Letter-Quality Printers

Letter-quality printers are business machines, & very high-ticket ones at that. Most individuals should buy a dot matrix first, adding letter-quality when it's needed. If you must have letter quality first & foremost, back yourself up with a cheaper dot matrix for drafts: they're faster & the letter-quality printer is reserved for final drafts.

G. ITOH

Starwriter

The **Starwriter**, released last year by C. Itoh, has proven a worthy printer. You don't trade off speed for price or quality. The **Starwriter** uses Diablo code, wheels & ribbons, has a 40 cps print speed, 1/48" line space, 1/120" horizontal spacing—ideal for proportional modes. (For real speed freaks, here's the **Printmaster**, at 55 cps. Same specs as above.)
Starwriter Parallel \$1379.00
Printmaster Parallel \$1879.00

DTC TERMINALS & COMMUNICATIONS

DTC 380Z

The **380Z** is a letter-quality printer that rivals and replaces the Daisywriter 2000. It has the 48K buffer, true Diablo emulation & uses the 8080/Daisywriter supplies. The documentation is great, & the **380Z** even has pin-outs on the back for easy interfacing (parallel or RS-232C). Eat your heart out Daisy! DTC 380Z \$1134.00

SILVER REED

EXP-550

Why buy a Transtar when you can buy from the guys who make them? The **Silver Reed EXP-550** is a 16 cps, 132 column letter-quality printer with true Diablo emulation, making it compatible with most word processing software. It's ideal for medium duty office work. Add a buffer & you'll have a versatile printing system.

EXP-550 (Parallel) \$716.00
EXP-500 \$CALL

SMITH-CORONA

TP-1

The **TP-1** is an ideal second printer for small offices or homes. The tractor feed (now available) enhances its paper handling. If you're letter-quality needs are light, this might be the machine. (Specify 10 or 12 cpi when you order.)

TP-1 \$CALL

We sell a variety of other letter-quality printers, including the Diablo 820 & 830, the NEC 3530, 3550 & 7730 Spinwriters, the Quine 11 & many others. Call (603) 881-9855 for technical details. For prices, or to order, call (800) 343-0726.

Accessories

We carry the accessories below as well as others too numerous to mention, like cables and diskettes. Ask if you don't see it listed.

QUADRAM

Microfazer

Quadram's **Microfazer** is a stand-alone buffer that can be expanded to 512K—that's about 200 pages. External buffers can be moved from system to system, & they leave your PC memory free. The copy feature lets you print unlimited copies of a document. Comes with its own cable. The power supply is optional.
8K parallel/parallel \$154.00
64K parallel/parallel \$219.00
256K parallel/parallel \$229.00
512K parallel/parallel \$76.00
9 Volt Power Supply \$16.00

TBL PRODUCTS

Printer Switch

We finally found a printer switch box that we like. Switch between two printers, in parallel/parallel or serial/serial versions (all female plugs).
2-Way Printer Switch \$118.00

UNIVERSAL OUTPUT SUPPLY

Printer Paper

Our pin-fed tenfold paper is 20lb white bond, shipped in a sturdy case. There are two sizes: 9 1/2" x 14 1/2". The wider paper also comes in green-bar. Paper (9 1/2") \$44.00
Paper (14 1/2") \$49.00

HIGH TECHNOLOGY AT AFFORDABLE PRICES THE BOTTOM LINE

MILFORD, NH 03055-0423 □ TELEPHONE (603) 881-9855

IBM PC COMPATIBLE

64K Chips

We carry 8184s, 200 nanosecond-type memory chips for upgrading your IBM PC peripheral boards. They're sold in sets of nine each, & we have quantity pricing for even bigger orders. We also have 18K chips (9/ set) for upgrading the PC's mother board.

64K Chip Set	\$78.00
18K Chip Set	\$28.00

Monitors

Here's the "eye of the beholder" holds against any spec's. Our favorites are listed below. Remember to get the Color Graphics Card, not the Monochrome adapter.

USI

Pi Series

We're still using a Pi-3 Amber that we advertised last summer. The 20MHz bandwidth gives the highest resolution available, & we like the no-nonsense case & controls. Uses both SO-239 or RCA phono jack. Cable is optional.

Pi-2 (12" green)	\$150.00
Pi-3 (12" amber)	\$160.00
Pi-4 (9" amber)	\$150.00

PRINCETON GRAPHICS

HX-12

The HX-12 is, without dispute, the highest resolution RGB available for the PC. 16 colors (using NEC's tube), 890 dots by 240 lines, 15MHz bandwidth & more. The HX-12's case styling is identical to IBM's. It comes with its own cable.

PGS HX-12 (RGB)	\$520.00
-----------------	-------	----------

QUADRAM

QuadChrome

The Quadchrome has the same spec's as the HX-12, but with the Quadram name. Same price too.

Quadchrome (RGB)	\$520.00
------------------	-------	----------

We also carry Amdek Colors 1, 2 & 3. Electrochrome's 1302-1 & 1302-2 Series, NEC's JC-1203, Quadrama's QuadChrome & Zenith's ZVM-121. Call (603) 881-9855 for technical details. For prices, or to order, call (800) 343-0728.

Modems

There's a boom in telecommunications, and to be part of it you need a modem & software. As with printers, the software determines most things, like support of the modem's features (the "bells & whistles") & the ability to communicate with the given device. Check things out! Communications can be a nightmare if you're gone using, & easy as pie when you know what you're doing.

US Robotics Password

\$379.88 UPS DELIVERED

An exceptional value for a 1200 baud modem. The Password is a direct connect originate/answer type modem with 0-300 & 1200 baud capability (Bell 212A compatible). Features include auto dial, auto answer, auto mode and auto speed select, full & half duplex (local echo), DTR override, RS-232C pins 2 & 3 reversible & audio phone in a monitor. Single button operation makes the Password very easy to use. Comes with an RS-232C cable, power supply & modular telephone cable.

DC HAYES

Smartmodems

The Hayes Smartmodem has earned an enviable reputation for quality, reliability & performance. The Smartmodem features full/half duplex, auto dial/answer, programmability in any language, English/numeric result codes & either 300 baud (Bell 103) or 300/1200 baud (Bell 103/212). It comes with modular cable & power supply. The RS-232C cable is optional.

Smartmodem (300)	\$218.00
Smartmodem (1200)	\$238.00

We also carry the Novation Auto-Cat & SmartCat Series & US Robotics. Call (603) 881-9855 for technical details. For prices, or to order, call (800) 343-0728.

Expansion Boards

AST RESEARCH

Megaplus

The Megaplus uses one slot, but it has one parallel port, two RS-232C ports, a clock and software (SuperDrive & SuperSpooler). Add more memory in 64K increments up to 256K. The Megapack, at 256K, is a piggy-back card.

64K Megaplus	\$330.00
256K Megaplus	\$490.00
Megapack 256K	\$330.00

I/O+

The I/O+ has a parallel port, a RS-232C port, a game port, a clock & software, but no memory.

I/O+	\$190.00
------	-------	----------

Connect All	\$24.00
-------------	-------	---------

QUADRAM

Quadboards

We sell Quadboards because they consistently perform better than any other board we've seen. They come with 64K & 256K on-board, a parallel port & RS-232C port, a clock & the software (QuadDrive/Spooler). The Quad 812+ is a memory board with a RS-232C port. Single function boards are also available. Quadram products are warranted for a full year.

64K Quadboard	\$278.00
256K Quadboard	\$428.00

812+ Expansion

Quad 512+ (64K)	\$230.00
Quad 512+ (256K)	\$390.00
Quad 512+ (512K)	\$590.00

Memory Only

64K Memory	\$190.00
128K Memory	\$280.00
192K Memory	\$300.00

Single Function Cards

Clock/Calendar	\$80.00
Parallel Card	\$80.00
RS-232C Card	\$80.00

QUADRAM

QuadLink

A real breakthrough! QuadLink lets you run Apple II/III+ file software in the IBM PC. It's like having a 64K Apple computer installed in your PC. QuadLink uses standard PC printer ports, monitors, etc. No disk, no version or reformatting required. Takes up only one slot.

QuadLink	\$440.00
----------	-------	----------

Disk Drives

Internal hard disks have only one weakness: they bring the whole system down with them if they need repair. It pays to configure with two floppies first, then add a hard disk that can be detached for service if it needs, leaving you otherwise operational.

QUALITY COMPUTER SERVICES

Hard Disk

We took our QuGeS Hard Disk Subsystem out of its box, plugged it in, turned the power on & never bothered with it again. These units are rugged, reliable & easily interfaced. It's become a minor legend: QuGeS warranties their hard disk for a full year—an exceptional thing in this business. Comes complete, ready to run.

12Mb Hard Disk	\$2000.00
20Mb Hard Disk	\$2300.00
40Mb Hard Disk	\$3500.00
80Mb Hard Disk	\$4700.00

MAYNARD ELECTRONICS

Disk Controller

These controllers fill the bill for anyone building the PC from scratch. The Maynard Floppy Disk Controller handles two internal drives (A & B) plus two externals. Comes plain, with a parallel port or with a serial port.

MFD Standard	\$100.00
MFD w/parallel	\$210.00
MFD w/RS-232C	\$250.00

IBM PC COMPATIBLE

Disk Drives

Tandon is our primary source for drives, but we've used MPI & Control Data without any trouble. We'll use drives of equal quality if Tandon's aren't on hand—same as IBM does. Single-sided

Double-sided	\$220.00
Double-sided	\$270.00

Information/Orders:

(603) 881-9855

Orders Only: (800) 343-0728

No Hidden Charges:

We pay UPS ground shipping on all our orders, and we never charge extra for credit cards. We accept CQDs & add a \$10 fee per order. We have a \$50 minimum order. Personal checks are cleared in 3 weeks.

All our equipment is shipped factory-fresh, with full warranties. We're authorized for warranty work on a number of printers, & we also offer extended warranty plans for those printers.

Sorry, we cannot accept open POs or extend credit/terms at these prices. APO and foreign orders are not accepted.

We prepared this ad in April, & prices do change, so call to verify them.

THE BOTTOM LINE

MILFORD, NH 03055-0423 □ TELEPHONE (603) 881-9855

Is the IBM PC a victim of its own success? Or does the current shortage of several key PC components suggest a secret sales strategy?

The Great Five-Point-Two-Five-Inch Disk Drive Shortage

If vendors of computer software and hardware have learned one thing in the past 24 months, it is that once an appetite for computers has been created, the consumer's desire for immediate satisfaction is nearly insatiable. Having scrimped, saved, borrowed and begged to get the required money together, the new computer enthusiast does not want to wait even a few days for full and complete delivery.

Let's Get Sirius

Among early students of this truth were the people who make the Victor 6000 16-bit microcomputers that are sold in Europe under the name Sirius. This high quality machine, which appeared fast on the heels of the first IBM PC, quickly won public acceptance, particularly from computer professionals, who were impressed by its high quality engineering. Disk capacity was considerable—more than 600,000 characters per drive. A hard disk was available. The bit map 600×300 monochrome screen offered the best resolution in the industry at the time, and the keyboard was "American standard," including oversized Shift and Return keys.

In fact, about the only problem facing the Victor 6000 was its unavailability. There weren't enough machines to show

and distribute to software developers and publishers. Which meant there were too few to sell. Although the Victor today remains among the better selling MS-DOS systems, the early problem with supply left a breach for Texas Instruments, Wang, DEC, and other Johnnies-come-lately to invade. They are now competing vigorously for the computer hardware dollars not going to IBM, Apple, and Tandy.

The Great Disappearing Disk Drive

Of course, "ramping up for produc-

A *ABOUT THE

unavailability.*

tion," as it is called in the manufacturing sector of the industry, is not simple. Pieces of equipment as diverse as computer chips from Singapore and rubber grommets from Ohio must be procured, tested, integrated, tested again, packaged, serial-

ized, stamped, boxed, shipped, and sold. Disk drives, certainly the most complex, labor-intensive and vulnerable component of a Personal Computer, have been in short supply for many months. In such a situation, only the biggest and best could be expected to have the resources to take advantage of widening sales and supply opportunities as they arise.

Or could they? Is it possible, in fact, that even a seasoned competitor such as IBM is suffering from growing pains? The answer seems to be "Yes." An unofficial survey of ComputerLands and other department stores, including IBM Product Centers, selling IBM PCs found that several key PC components are in very short supply these days.

It comes as no shock that Product Centers are not stocked to the gills with IBM XT's, which were introduced only a few months ago. But disk drives? Monochrome monitors? Serial and parallel printer boards? One would expect that there would by now be sufficient supplies of these plain vanilla, high-profit items to meet what should have been expected to be a rapidly rising demand.

Has IBM misread the market it created? Or has the procurement system that was devised to bring the PC to market early fal-

tered as production demands increased?

It is true that the PC was the first major piece of computer equipment IBM ever designed with major components provided by outside "jobbers." Although IBM will not comment on the source of its components, it is common knowledge that Tandon Corp., for example, is a major supplier of the IBM-labeled disk drives. Epson sells dot matrix printers to IBM.

NEC supplies letter-quality printers. Intel supplies chips. Seagate Technology and MiniScribe are said to be supplying the XT's hard disks.

Depending on outside vendors introduced two variables. First, will these suppliers produce equipment in the quantity and quality that IBM and its ever-growing customer base need and demand? Might the demand for these products be so great

that the incentive for producing them, in the high volume and low margins IBM insists upon, becomes an unattractive alternative to marketing the same or similar products to other manufacturers and

Q: How did the IBM® PC become a test and measurement controller?

A: With a Ziatech ZT 1488 interface, of course!

THE ZT 1488 INCLUDES ALL THIS ON ONE I/O BOARD:

- GPIB control of 15 devices on one cable.
- Clock/calendar with battery for initiating and pacing measurements as well as recording events.
- MULTIMODULE† socket for optional I/O capability of your choice.
- BASIC software for ease of programming

Ziatech also manufactures GPIB interfaces for MULTIBUS† and STD bus

distributors?

PCs with the standard 64K RAM and a single 320K disk drive remain widely available but in recent months—particularly during April and May—dealers are experiencing increasingly serious shipping delays for disk drives and IBM optional boards. In some cases, back orders are becoming a major concern.

One East Coast dealer, who asked that neither he nor his company be named, indicated that his store was short more than 100 drives. "We can only get machines with a single double-sided drive, and when we order individual IBM disk drives, we are back-ordered." What does the dealer do in such a situation? "We look for alternate sources for drives, such as those manufactured by Tandon, which we can install and sell."

**ONE EAST
Coast dealer indicated
that his store was short
more than 100 drives.**

Unfortunately, not everyone selling PCs is in a position to seek hardware from outside vendors. In San Francisco, for example, one IBM Product Center employee acknowledged that customers

were waiting 3 to 4 weeks for IBM PCs in their configuration choice.

Contacted at the Boca Raton IBM PC headquarters a spokesman for IBM confirmed that many PC components are in short supply. "Starting in the last quarter of 1982, demand for the IBM PC has been very high. Consequently we find that we have a shortfall between demand and supply for many of our IBM PC products. We are working very hard to bring supply into line with demand but we have not accomplished this goal as of yet," he said.

Austere silence prevails at ComputerLand Corporate headquarters, where a company spokesperson explained that he could not discuss the situation because, "We have a corporate policy of not commenting on our relationship with vendors."

A Tale of Two Drives

When customers accept a drive from Tandon or another manufacturer, they will usually save more than a few dollars. Typically the retail cost of a Tandon is \$150 less than the drive with IBM's logo on it. However there may be other considerations. For example, IBM's extended service contracts are certainly not extend-

according to IBM.

ComputerLand dealerships contacted emphasized that they would honor warranties and repair non-IBM drives on the same terms that they would drives with the IBM label.

Another concern deals with reliability. It seems that not all double-sided, double-

density drives are created—or at least tested—equally. Boh Roswell, co-owner of several Maryland ComputerLands, reported that he had found reliability differences between the IBM drives and Tandon drives. "I have probably sold three times as many IBM drives as Tandon drives. I have never had a drive motor fail if the

IS IT

possible, in fact, that even a seasoned competitor such as IBM is suffering from growing pains?

ed to non-IBM components, and once a microcomputer has passed beyond the critical 100 hours of use, it is the disk drive that is most likely to need attention or replacement.

As a matter of fact, IBM asks that you remove non-IBM components from the PC before you bring it in for servicing. The reason for this is that IBM service people feel that non-IBM products could affect some of the diagnostic tests they perform on failing PCs. However, repairing machines with non-IBM components in them is "generally no problem and we would try and work around the situation,"

drive had an IBM label. But I have had three or four Tandons fail in the last year and a half. That is not very large number considering our volume, but the difference is there."

Speculating on the Market

Several observers have been willing to

speculate anonymously on the reasons for the shortages of particular components. Here, for IBM-watchers, are some explanations for the shortfall.

The Grass Is Greener Theory. In this scenario, IBM's second-party manufacturers are supplying products to IBM in the quantities called for by their contracts, but

not in sufficient quantities to keep up with demand, which is running far ahead of projections. Since other computer manufacturers and dealers are willing to pay more for the bare drives than IBM, it makes dollars and sense to divert as many

IT MAKES
dollars and sense to
divert as many units as
possible away from Big
Blue.

units as possible away from Big Blue. Thus, even though IBM sells drives that are manufactured by Tandon, Tandon may make more money on one of its drives sold by an independent for \$380 or so than it does on its drive sold under the IBM label for \$529.

The Big (Press Conference) Bang Theory. IBM may be preparing some major changes. One dedicated IBM-watcher discounted the possibility of supply problems. "My guess is that IBM has something up its sleeve. A few months ago MultiPlex disappeared for a while. When it became available again, it worked on the XT hard disk. The same thing happened with the color card, which was switched a few months ago—first the scarcity, then a revised product. Now monochrome boards and parallel port boards are in short supply. My guess is that we will soon see a new, very high resolution board with a parallel port for the IBM PC."

Seems reasonable enough, since third parties such as Hercules Graphics are making much hay on high resolution (720×348) monochrome boards for the PC. Why the rush? VisiOn, the VisiCorp-IBM answer to the Apple Lisa, will be a much more impressive product on a screen with higher resolution than is currently available.

Could a similar change be in store in the disk drive department? If so, there are at least three possible developments:

● A switch or option for 96 tracks per inch (tpi) 5.25-inch floppies may be planned. This would give double-sided drives about 800K of storage compared to

the 320K for 1.1 DOS and 360K 2.0 DOS. A disk capacity of 800K would bring the IBM PC back within striking distance to Apple's Lisa.

● Thin-line drives are being readied. This would allow either four floppies or two floppies and a hard disk in a single unit—nearly doubling the disk drive sales potential for each PC sold.

● IBM is rushing its 3.9-inch micro floppy to market in hopes of establishing a beachhead against Sony's 3.5-inch micro floppy.

The Theory of Evolution Theory. Perhaps IBM is shopping around for or has already arranged for the manufacture of its drives either by other suppliers or in its own facilities. One would guess that with the great rush to desktop computers, the Selectric division of IBM may be looking to expand its potent manufacturing expertise into a new and lucrative area.

The Block Hole (of Calcutta) Theory. IBM has recently begun marketing the PC in Europe and Australasia. Perhaps the supply of various components is being diverted to foreign markets.

The Nontheory Theory. This theory holds that the shortfall is a combination of theories one through four above, with emphasis on the inability of the current market to keep pace with a rapidly increasing consumer and manufacturer demand.

CONTINUED *shortages of current proportions will not affect demand for PCs.*

On The Future of the (PC) Universe

The final and perhaps ultimate question is "What will be the effect of product shortages on IBM's relations with the ComputerLands of the world and with its consumers." Although continued shortages of current proportions will not affect demand for PCs, the shortfall threatens to expose the illusion of invulnerability surrounding IBM and its products. It does affect the corporate consumer who has no time or patience with working around ser-

vice agreements that do not apply to non-IBM components, particularly when he or she had no choice but to accept non-IBM or nothing.

The shortfall offers some ray of hope to the PC clones and lookalikes, particularly the portables, if they can indeed reach market in sufficient numbers to meet the

ever rising demand.

The situation buys precious time for companies like Victor (which is currently completing a new three-building manufacturing facility in California), which may indeed have built the better mousetrap, but remains unable to make enough of them to catch the mice. /PC

PerFin, your personal money manager.

It's impossible to plan for tomorrow unless you know what you're spending today.

PerFin, the personal financial program for the IBM-PC, helps you analyze spending patterns through a comprehensive, yet easy-to-use method of records-keeping. Priced at only \$65*, PerFin is the most inexpensive, effective resource available for personal money management.

With PerFin, you can track all your expenses in up to 40 user-defined categories, creating permanent records by month and category. And that information becomes the basis for realistic goal-setting with PerFin's budget feature.

You can request year-to-date reports by category, or ask PerFin to alert you when you're over-budget.

You can also use PerFin to balance your checkbook—quickly and accurately. Provide comprehensive reports for income tax purposes. Edit, delete, or rearrange entries. Whatever your financial goals, PerFin is a proven tool that can help turn them into reality.

5000

PeachText 5000™

In a word, a star is born.

PeachText 5000™ has arrived. A complete personal productivity system for word processing, financial modeling, mailing lists and simple data-base management. All at one price—\$395.00. And all from Peachtree Software Incorporated.

The quality is unmistakably Peachtree: proven, powerful applications with menu-driven features, easy-to-use documentation and quick access to "Help" prompts. And they're fully interactive.

PeachText 5000 is available for the IBM Personal Computer™, the COMPAQ Portable Computer™, the Texas Instruments Professional Computer™ and the Zenith Z-100.

The PeachText 5000 Personal Productivity System includes:

1 Word processing

PeachText™ word processor. PeachText has long been recognized as one of the best in the industry, with sophisticated print capabilities second to none and complete editing capabilities for creating and manipulating a variety of documents. We've made it even better for PeachText 5000.

We've even installed the Random House Electronic Thesaurus™ in PeachText.

Spelling Proofreader. This high-performance package can check a 10,000-word document for spelling and typographical errors in less than two minutes.*

2 Financial planning

Turn your computer's memory into a worksheet for financial and other mathematical analysis. PeachCalc™ will address up to 256K of RAM, so you don't have to worry about your memory space outstripping PeachCalc's capacity. Combine spreadsheets with PeachCalc's merge functions or insert PeachCalc reports

into PeachText documents. You can even use the "Execute" command to set up material from PeachText or other files to be fed into PeachCalc.

3 Data management

List Manager. This module uses Peachtree's state-of-the-art screen manager and index file manager to give you complete control over the design and use of mailing lists, labels and other files or reference aids. Output can be used with the PeachText word processor to individualize form letters or template documents.

Limited Time Introductory Offer

Now PeachText 5000 is available for \$395.00. That's right—just \$395.00.

And that's not all. With your PeachText 5000 package you will receive:

A free box of 10 Peachtree/Wabash 5¼" diskettes to hold the fruits of your new Peachtree productivity.

A coupon to get Peachtree's "Access Pak" for \$10.00. The Access Pak, which has a retail value of \$525.00, includes Information Access, which allows you to extract information from Peachtree accounting products for use with PeachText

5000 applications. And you get file converter programs to make existing WordStar®, Easy Writer™ and VisiCalc™ files usable with PeachText 5000—because you shouldn't have to suffer because you've waited this long for the complete personal productivity system.

Free 30-day support from Peachtree Software Incorporated, on return of the registration card.

PeachText 5000 is here. The complete personal productivity system. And it's unmistakably Peachtree.

IBM UNLEASHED

Now you can move your IBM PC¹ from the fast lane into the jet stream. With the Personal Hard Disk[™] from Corona.

More power to you.

The Corona Personal Hard Disk really revs up your IBM PC, with none of the floppy bottlenecks, headaches and hassles.

You get 5 to 10 megabytes of storage.

Speeds up to ten times faster than floppy disc drives.

The high reliability of a hard disk.

In an easy add-on external package, or a convenient internal plug-in.

Lightning strikes twice.

If that's not enough, you also get a lot of the features of the Corona PC, our own 16-bit desktop and portable personal computer.

Like free RAM "disk." Just define blocks

of main memory as a disk and load your programs, then run them at incredible microsecond speeds.

Like disk partitioning that supports several operating systems at the same time, so MS-DOS² CP/M-86³ and Pascal are all right there when you need them.

Like simple menu operation that makes your PC friendlier than you would have believed possible. Small directories. Automatic backup. And much more.

All backed by Corona's exclusive DataGuard™ and FailSafe™ data protection systems for maximum reliability.

So if you're hungry for power and your IBM

just can't keep you fulfilled, get your hands on the Personal Hard Disk from Corona.

It'll set you free.

The Personal Hard Disk is available in internal and external, 5 and 10 megabyte versions. For the name of your nearest Corona dealer, just call us toll-free at 800-621-6746. Or write Corona Data Systems, 31324 Via Colinas, Westlake Village, CA 91361. (213) 991-1144.

The best test of a good database management program is how well it adapts to your tried and true style of taking care of business.

HOW TO CHOOSE A DATABASE MANAGEMENT SYSTEM

At times, the "global village" we live in seems like a Middle Eastern bazaar. Everywhere we go, someone is hawking information. If it's not a useful photocopy of the minutes of last Tuesday's meeting, it's a special news-focus on bargain vacations in the Caribbean. As more and more information vies for our attention, we become

threatened by input overload.

Some microcomputer manufacturers and distributors seem to feel that the most seductive quality of the desktop computer lies in its potential as a tool for helping manage this flood of information. They may be right. Even the language is expanding to reflect their point of view. Terms

that describe the growing number of microcomputer information storage and retrieval systems have begun to infiltrate our everyday vocabularies. One of these terms, *database*, is used to define the total information available in a particular context. Another, *database manager*, refers to software that manages that information.

Until recently, there were few powerful database management programs available for micros, and these were generally inflexible and otherwise difficult to use. You either had to program existing software to fit particular applications or, due to the small workspace allowed by the RAM available to most 8-bit machines, be content with a less than completely polished user-interface. Today, with more RAM commonly available for microcomputers, programmers can design comprehensive, user-specific software.

However, when you consider that the user interface can take more time to design than the functional portion of the program, it is no wonder the status quo changes slowly. We can look forward to more easy-to-use programs, database managers included. All of the programs reviewed here represent the most popular database-management software presently available. Except for 1-2-3, however, these programs were first developed for machines other than the PC.

In the plethora of advertisements touting database managers, there may be terms you don't understand, performance specifications that confound you, and promises

THE HARDEST part of learning to manage information is analyzing the way you work.

of speed and efficiency that are either incomprehensible or hard to believe. To guide you in your choice, we present here five people in different occupations with specific application needs. We look at the software they chose and analyze the appropriateness of each program to the requirements of the user.

Personal Information Needs

The hardest part of learning to manage information is analyzing the way you work. It has been said that computers make us think more logically. This is perhaps as much a threat as a blessing, as you will learn when you begin working with a database manager. The result of converting to a computerized database management system may be a vastly improved way of dealing with information; however, the act of setting the system up and incorporating it into your work can be very challenging, to say the least.

You will use a tool, the computer, in conjunction with another tool, the software, to create a very personal factotum: your information manager. It will save time, give you more control over your information, and reveal important relationships between types of information. It is a tool of your own creation, and you must think carefully and precisely about how you want it to work with you.

Date-management systems are built from a tandem of information storage and information retrieval. The first thing to consider, then, is what information you want to store. Maybe you read dozens of periodicals and have trouble finding an article when you need to refer to it. Or suppose you own a small retail business and find it difficult to glean the necessary inventory information from your sales slips. You might be in a corporate environment, drowning from the recurring wave of photocopies in your "in" box. There's also information from meetings. And what about those slips of paper you've collected from phone conversations?

Perhaps you're on top of your paper mountain and merely need to revamp the way you organize the information you generate with your computer, or receive from the in-house mainframe or from a commercial information utility like The Source or Compuserve.

The way you put information into your manual filing system provides an important model (if not an exact replica) for your computerized database manager. But you have options. Would you necessarily do it the same way, or should you redesign your current system? You must evaluate your procedures. What about actual data entry? Do you enter data yourself or does someone on your staff handle it? Consider at what point in your work process you enter the data. Do you take care of it as it

comes in (upon receiving and reading a report, for instance) or do you update your files at predetermined intervals?

All information has value, but not equal value. Its value may be determined by how current it is or by the way it relates to other information. Knowing a supplier is becoming difficult to work with, for instance, may or may not be of value, depending on the importance of that supplier to a particular stage of a project.

DATA- management systems are built from a tandem of information storage and information retrieval.

Define the different types of information you use, and determine if there are time factors or tie-ins to other information that might guide you in evaluating it.

Finally, estimate the amount of information you need to store. Depending on the nature of the job, estimates can be fairly exact or little more than wild guesses. You should sketch the limits of your database because that will be a deciding factor in your choice of software.

If you sit down and analyze how data comes in, and how it enters your record-keeping system, you've taken the essential first step toward finding a database manager that can work with you.

Next, you need to decide on the form and content of your data output. When do you need access to information? While talking on the phone or while preparing a memo for a meeting? Would a screen display be adequate or do you need a print-out? Is a rough summary enough or do you need a well-designed presentation?

What is your information-selection process? Do you regularly look for one particular kind of information, people who are 60 days late in paying their bills, for example? Or do you have different needs at different times? Perhaps you need to review all memos you've written in the last 6 months about Senate Bill 226

at one moment, and half an hour later, it's time to check sales-performance figures for 1982.

Do you keep your information in two or

A BILITY *to search and report information from more than one file at a time is a hallmark of relational databases.*

more distinct groups? For example, do you keep complete client information files separate from complete vendor files, since each group of information contains many items that have no bearing on the other? And though it may be easy to analyze your customer preferences or your vendors' best deals, you may occasionally need to look through both files to find a relationship between the two, such as the most lucrative markets for products with the best margins. (Indeed, this ability to search and report information from more than one file at a time is a hallmark of relational databases.)

Suppose you need your database output to interface with another program. There may be information in your database that you'd like to manipulate in a spreadsheet. Or perhaps information from your receivables database could be used directly in the preparation of an invoice or a letter. Also, with the increasing number of good business graphics packages on the market, you might consider the value of a black and white or color picture presented on a screen, paper, or slide.

Considering these questions may help you define as well as refine your data-control requirements. Where your designs are ambitious or complicated, you may make a false start or two. However, if you consider the rewards of an information system that works the way you work, the time spent clarifying your needs may be the best work-related investment you'll ever make.

Database Terminology

You probably don't think about databases when you look through the white pages of a telephone book or examine a baseball boxscore, but the fundamentals of database management can be easily understood by considering these two examples. The "white pages" directory of the phone book is a list arranged alphabetically by last name. It consists of names, addresses, and phone numbers of people living in one geographical region. If we were to consider the white pages a database of information, then each person would be a record, and his phone number, address, last name and first name would be the items of information that make up the field of the record.

Similarly, a baseball boxscore lists names and statistics. Next to the names of the players and their positions are performance tallies that include the number of times at bat and the number of hits, runs, and runs batted in. The boxscore is a database; each player and his associated statistics is a record. Each item of information about the player (name, position, times at bat, etc.) is a field.

What about information that doesn't fit neatly into rows and columns, records and fields, tables and lists? A student might stick colored dots on his research reference cards to cross-reference them. By using a color-coding system for those cards that apply to more than one subject, he avoids having to recopy any of them. Unlike a box score or the white pages, organized by records and fields, this student's cross-referencing system uses "key words" as its basis for organization. In the same way, database systems can utilize "key words" to retrieve information.

Claims of "incredibly fast sorts" in database advertisements are common. What is the significance of a "sorted" database? Consider the prospect of looking for a name in the telephone directory if it weren't organized alphabetically! In database terms, the phone book is indexed according to last name and sorted in alphabetical sequence.

In a book, the index gives page numbers to pinpoint the location of a particular piece of information. The index of a database works in the same way. It points to the physical location of the records. To create an alphabetical sorting, you make an index of all the last names. The computer database manager uses the pointers provided by the index to determine the

location of each record of information (not just the last names, but the entire record). It then has the ability to consult this index in order to find the record in which a particular last name occurs. The program can also sort, that is, physically rearrange, the records in the database. If the sort was performed by last name in alphabetical order, you would create a white-pages-type listing. The last name, in either case, serves as the key.

The yellow pages, in database terminology, are sorted by two keys. The primary sort is by type of business, and the secondary sort (the sort within the sort, so to speak) is by company name. If you're looking for Jimmy's Lobster Company, you flip past businesses such as Bridal, Insulation, Ladders and Lawyers until you get to Lobsters. Then, to find the one and only Jimmy's within the Lobster section, you scan the lobster-company names from A to J.

Although sorting provides one way to find information, such as in our Lobster search, the ability to search (also called select or query) goes beyond physically rearranging the information in one particular order. Looking for information in the yellow pages, for instance, can be slow and inefficient, as you know if you've ever

THE BOXSCORE *is a database; in database lingo, each player and his associated statistics is a record.*

tried to find a restaurant near your hotel when you're in an unfamiliar city. A database manager, designed to work with you, can give you information based on any schema you select. Although different from sorting, the process of searching or selecting information also makes use of the indexes prepared by the database manager. The more fields of information that are indexed, the more specific your search criteria can be, and the more elaborate the search possibilities.

Once the search is successful and the

particular information that meets your criteria is located, you can choose to display it on the screen, print it as part of a report, or copy it to a disk file for future use.

As you become familiar with the terminology, these common-sense concepts of information management become integrated with the way you work. It may be that you are forced to think logically about something that you've always reacted to spontaneously before. Or you may have to look at your work process from a different perspective. However, as evidenced by the yellow pages, you already deal with database concepts constantly.

Scenario: A Writer Chooses a Manager

A writer, a lawyer, a real estate broker, an office supplies company and a software company sales manager have all recently chosen database managers. They all do different work and have different input/output requirements; consequently, they opt for different database managers.

A writer buys a computer for word processing. She needs help filing her notes, research, outlines, and drafts. Much of the available software is unsuitable because she does not want to delineate the exact layout of the database until after she begins to use it. She'll never be able to think of every possible item that she may want to include. Also, none of the structured databases allows her to add more than a line or two of text per field.

She makes some preliminary inquiries by talking to retailers, mail-order houses, and software companies. For input she

She'll assign all the words that reference the entry at the time she enters it. (See Figures 1 and 2 for examples of sample restaurant database file.)

There is no set formula for estimating size requirements in a system as free-form as the writer has in mind. However, choosing a paragraph as an average-length entry, she estimates the people file and bibliographic-reference file at 200 items each, her ideas file at 50 to 100 items, and her "yellow pages" file at 100 items.

She wants to be able to retrieve infor-

wants to work spontaneously and type in notes from a variety of situations: telephone conversations, magazine articles, random ideas, the address of a good Chinese restaurant, and the synopsis of an article she is planning. She is willing to commit herself to key words as she goes.

mation quickly, based on a key word. Printed output is only occasionally necessary, but linking some entries in a common disk file is essential, so that she can gather them into a word processing file.

After looking through a manual of a computer store, she decides that DotoFox from Link Systems in California is the program for her. Within a couple of hours after setting up the disks and browsing through the clear and informative manual, she is manipulating the name and address example file on the disk with ease.

Within a week, the writer starts to incorporate the program into her daily word flow. After a telephone interview, for instance, she types her notes into a DotoFox file. DotoFox provides her with enough word processing capability to make the data-entry seem familiar. In fact, it allows her to reassign the DotoFox keys to emulate the key functions of her word processor. When she finishes each entry, she includes the key words that she wants to use to retrieve this information.

When she needs to retrieve data, she hits a few keys and is presented with a screen asking for key words to begin a search. If she is unsure of her key word options, she can take a look at all the key

words "author" and "Redford." If this fails, she can select first "author" and then "Redford" to view all pertinent entries relating to either key word. If she wanted to search for a note about Robert Redford, the actor, she could employ the same strategy, first looking for all entries relating to the combined key words "actor" and "Redford," and then searching from these key words separately.

She can display the information, send it to the printer, or save it on a disk. She can also view and then print each entry selectively. She can use the database as a calendar, by storing key dates rather than key words.

The writer's initial estimation that she would need very little printing capability was not quite accurate. She finds it very useful to engage the DotoFox printing feature that allows her to output a specified number of lines. For instance, she's been consistent in typing name, address, and phone information, where applicable, on the first 6 lines of each entry. Using the delimited print feature of DotoFox, she has a rough equivalent of the more structured name, address, and phone list, selected and printed out by project.

Even as she continues to think of more ways to use DotoFox, she marvels at how quickly the program has become essential to her work process. She has succeeded in identifying an information storage and retrieval system that works with her.

Superfile to the Rescue

A Customs lawyer is inundated with photocopies. Most pertain to new laws on the importation of merchandise into the United States. Up to now, the lawyer has been content to let the papers accumulate for a week or two until his staff can organize and bind them chronologically by type of merchandise, country of origin, and date. If a client calls requesting information about current laws applying to the importation of polyester knit handbags from Haiti, for instance, he simply finds the binders with the applicable rulings and refers to the most recent ones applying to Haiti.

Unfortunately, this can take too long when a number of laws apply and he must search through several binders to find the ones relating to the country in question. And he can't very well make duplicates of all the printouts that apply to each individual country, since many rulings relate

to more than just one country. He also has to flag temporary or pending rulings to distinguish these from permanent ones. These subtleties are beyond the capabilities of present manual filing systems, and frequently he has to dig through a mountain of paper, filed and unfilled, to find the

SHE MARVELS

process.*

pertinent information.

Although many other branches of law have been using legal information utilities, this specialized branch is the laggard in the field. As a business that depends on information too esoteric to be part of a commercial information utility, this law firm needs to organize its information in-house. So far, however, it has converted only the staff functions of time billing and word processing to computers; the lawyers in the firm using personal computers are using them on their own. As the youngest partner, the lawyer in question feels that using his PC to manage government updates might speed up automation in the rest of the firm.

His input/output requirements for a database manager will not be much more complicated than they are now. He already prepares photocopies for filing by using a yellow marker to indicate subject, country, and date. He would like to add a paragraph that summarizes the ruling, and an indication of the binder location of the actual ruling.

The size requirements for his database are likely to be large. If he transfers the materials already filed in his manual system into the database manager, he would need to allow for as many as 3,000 entries, each a paragraph or two in length.

The main output will be to the screen, on a ruling-by-ruling basis, selected by criteria determined by client needs. To access this output, the lawyer wants to be able to search by key words such as country or type of law. He would like to send

NONE OF
*the structured databases
allows her to add more
than a line or two of
text per field.*

words in her database, or she can give DotoFox a rough guess and get a display of her dictionary's 21 closest key words. Seeing a display of her own key-word list, she realizes that she could have been more precise in setting it up since she sees many overlapping key words such as "wine" and "wines" or "New York" and "NY." Fortunately, she can either delete or add key words.

Suppose she wants to find a note about an article on Robert Redford, the actor. Assuming she was practical in assigning key words, she could bring up the particular note she wants by selecting the key

related entries to a disk file for future inclusion in a letter or report. On occasion, he needs to print out a list of related rulings. But he expects that the main usefulness of a data manager will be in providing a cross-referenced index to what is essentially a bibliographical database.

For example, if he gets a call about polyester handbags from Haiti, he puts together a search for entries that include polyester, handbags, and Haiti. He receives the pertinent information and an indication of where the full printout of the information is located. Perhaps the most important justification for converting to a computerized database system was speed. However, considering the lawyer's need for extra capacity, the database will have to span several disks.

Superfile by FYI, Inc. is the program he chose to do the job (see Figure 3). When he talked to FYI, he got a straightforward summary of the features, as well as the limitations, of Superfile. Though Superfile does not really update or change entries easily, his system, bibliographical in nature, does not demand it.

Now, when our lawyer marks the printouts he wants filed, he includes (in addition to subject, country, and date) other pertinent key words such as "update 84" for those laws likely to be changed, and

standard, ASCII output (one that doesn't export special, software-specific codes) the typist adds a Superfile entry for each ruling. These entries differ from standard text files by virtue of three special markers and a line or two of key words. Using the key words and text summary specified by the lawyer, the staffer zips through the data-entry phase in no time. To convert these standard text files into Superfiles takes only a few keystrokes and about 10 seconds. The output can be displayed, printed and/or filed to disk either continuously or on an entry-by-entry basis (see Figure 4 for example of file printout).

Suppose the attorney gets a phone call about batteries from Taiwan. With a few keystrokes he can view summaries of the pertinent rulings scrolling across his

screen. If the lawyer wants a printout of the search, he can choose the printer option on an entry-by-entry basis, decide

THE *Superfile manual is a model of clarity and usefulness.*

he wants to print them all, and opt for continuous printing. In the case of a frequently-recurring question, he can save the selected items to a disk file.

The system is working so well that the

physical filing specifications such as "binder 6." The Superfile manual is a model of clarity and usefulness, going so far as to devote a number of pages to helping organize a key word dictionary to avoid time-consuming redundancies.

The same person who files the rulings now adds a little typing to the process. Using any word processor with a stan-

attorney is thinking of making up a Superfile database on all his correspondence. Since Superfile essentially superimposes itself on existing text files, this is a snap. A letter can be prepared for filing as it is being typed (using nonprinting "comment" lines common to most word proces-

sors) or after the letter has been printed.

Should he want to delete or change entries, the lawyer faces a somewhat complicated series of steps to prepare files for re-indexing by Superfile. Since the data that makes up this system will not be changed, however, this limitation does not affect its performance in this situation. Although some would find it difficult to do without an interactive search and update feature (such as is available with DataFox), it is not a pertinent function for our lawyer. Superfile fits into the particular work situation of this lawyer and his staff. And this is the foremost benefit any software can provide.

A Realtor Trades In Her Cards

A real estate broker with a business going stronger than ever since she started to work independently needs to keep track of her numerous properties and clients. The list of properties she handles exclusively is certainly large and her others are even more numerous. Her clients stayed with her after her move, and referrals, from owners and clients, keep coming.

The real estate agent's approach to managing data has not changed in 20 years: a master list of properties, sorted by size (in square feet), backed up with 5- by 8-inch index cards, each with 20 to 25 items of information about the property on one side, and a list of clients who have seen the property on the reverse side.

In addition to automating her present system, the agent would like to be able to send out announcements to as many pros-

pects as possible about properties as they become available. These mailings are too time-consuming to do by hand, however. As she shops around she keeps hearing about dBase II. When she finally gets a chance to actually read through the manual, however, she realizes that she's not willing to invest the time or money to program it.

She finds out about T.I.M. in a back issue of a computer magazine in what wasn't a fabulously complimentary review. She knows the name from advertising she's seen, but the program is obviously not advertised to the extent that other popular programs are. She's surprised to see it listed in a software sales chart as one of the best-selling database managers for the PC. When she talks to a salesman at a retail store, she gets a good report about the support the store gets from the people at Innovative Software. On the phone to them, she gets informative and helpful answers to her questions. They are quick to point out that the program (written in BASIC) comes in a faster (compiled) version now, having been through several revisions since its initial release.

As long as she can find software that lets her input and access her records in two distinct parts (property information and client visits), she realizes she does not need a database that works on two or more files at one time. She wants a full-screen editor to allow flexibility in designing the screens, adding data, and viewing selected records. The number of fields available to her is more important than the speed or size capabilities, since she'll have at most 300 records, but with as many as 35 to 40 fields per record.

She decides on T.I.M. based on the specifications and the recommendations of the telephone salesperson. She likes the fact that the entire program seems to be easy to learn and use and that it is menu-driven. She especially likes the two-screen feature of T.I.M. that will allow her to design a form exactly like the one on her index cards with a front and a back. (See Figures 5 and 6 for example of a two-part form for data entry.) Although T.I.M. doesn't specifically handle form letters and mass mailings, it allows her to transfer records to a disk file for use with Word-Stor's MailMerge.

When the program arrives she remembers having vowed to the salesman that she would sit down and read the manual

for a couple of hours before running the program. After half an hour with the manual the terminology overcomes her, and the examples and tutorials at the back of the manual seem much more appealing. She proceeds to perform the clearly-documented set up/back up procedure and gets down to playing with the samples included with the program. Some of the messages are a little hard to understand, and at one point the screen displays "hit carriage return to enter or h for help." When she hits b she gets a message that says, "No help available at this point." Also, she seems to be forced to switch disks frequently on her dual 160K-drive system.

But by this time she's entranced by her "hands-on" session. The manual presents clear explanations on all the concepts, functions, and features of the program. As she works through the tutorials and examples supplied on disk, she refers to the reference part of the manual. All the time she's put in over the last few months thinking about how best to manage her real estate data and the software now at her disposal begin to mesh as she runs through the program. She's impatient to go ahead and set up her own database.

She perseveres however, waiting until she feels comfortable enough with the concepts and performance of this program. She then leaves the computer and takes a blank piece of paper and redraws

her master list and file-card form, making sure that she has included all her fields.

In a very short time she has used T.I.M.'s full-screen editor to create the two screens that will replace her index cards. Soon she starts entering data. In the days that follow, she finds the speed of T.I.M. to be perfectly acceptable for her 300

Brother You've Arrived!

The BROTHER HR-1 Daisy Wheel Printer opened up a new market in low cost, high performance printers.

BROTHER HR-1 offers letter-quality printing for all your most demanding business requirements, with a noise level comparable to a whisper in a soft rain.

The HR-1 is now available with a tractor option which enables conversion to fanfold in seconds, and a dual warning system of sight and sound to signal "paper-out" and "ribbon-end".

It was not by chance that Dynax introduced the BROTHER HR-1, and now that we've arrived, we intend to stay.

ticular client has looked at since November of last year in a particular neighborhood. She can save these search strings, too. As for form letters, WordStar and MailMerge actually turn out to be less friendly than T.I.M.

The agent has found a database manager that works with her to manage information in much the same way she's been doing it all along (but more efficiently).

dBase II on the Supply Line

An office supply business has decided to automate and now has a PC in place running WordStar. There are two partners, brothers Bob and Raymond, one the "outside man" and the other the "inside man." Bob is the personable outside salesman who knows his customers, and Raymond is the detail-minded business manager who knows the books and the inventory. They went to find a database manager that will support the way they work and not just improve their recordkeeping.

For instance, during the course of the week, Raymond might remind Bob that the company paid a lot for NEC Spinwriter ribbons last fall and still has many of them lying around; he asks Bob about discount possibilities. Bob thinks about it, calls a couple of likely customers and then checks back with Raymond about quantity and price. Raymond figures the break-even, factors in the cost of inventory and

comes up with an acceptable price. By the end of the week, the stock is out of the basement and the money is on the way.

When Bob and Raymond relate information about inventory to information about customers, they are doing what a relational database manager such as dBase II does. Their database manager needs to be able to work with at least two totally independent files—one file composed of inventory records and another of customer information. The database manager should search each file simultaneously and pull out records that match separate criteria for each. That is, on the one hand,

it must search the inventory fields that include information about cost and quantity and locate items that would be profitable to unload at discount. The program must also be able to search the customer file at the same time to find buyers whose preferences match these discountable inventory items.

Bob and Raymond estimate their size requirements: an inventory file of 1200 records of 25 fields; a customer file of 600 records of 15 fields.

Raymond discusses dBase II with retailers, mail order houses, and even members of special-interest groups such

Presenting Hyperion™, the world's most powerful, portable computer developed for the busy professional.

A Star is Borne ★

StarLight

Hyperion is a true portable, weighing in at only 18 pounds. It is light on the eyes with its European amber screen and styling. But heavy on performance with many standard features which are expensive necessities for other personal computers. And all for a price that's less than you'd expect.

StarBright

Hyperion is bright. Communicating with the world is easy with our integrated voice and data package. Standard is our 256K RAM memory, essential for the new generation of application programs.

Hyperion has the same processor, graphics and operating system as the IBM P.C. However, an improved keyboard ties the function keys to our screen soft keys. All this means Hyperion can run popular IBM software right off the shelf — Visi Calc¹, Word Star², Data Base II³ and many, many others.

Hyperion is the rising star in personal computers. Catch a rising star today.

Standard Features

Processor	Intel 8088
Software	MS DOS Advanced Basic (Microsoft) Advanced User Interface*
Memory	256K User Ram*
Drives	5 1/4", 320K bytes, IBM compatible Virtual Ram Disk (Up to 160K)*
Display System	7" Non-glare amber Graphics — IBM PC compatible Full 80 x 25 character format Auto screen off for prolonged life
Serial Port	RS 232C* RS 423*
Parallel Port	Centronics/IBM compatible*
Other Features	Time and date clock with battery back-up* Additional video output for external monitor*

*These extras worth over \$1000.

Optional Extras

Drive	Additional 5 1/4" 320K drive
Communication	IN-TOUCH telephone management system Built in 300 baud modem (103J) Direct connect
Acoustic Coups	Uses internal modem
Expansion Chassis	5 or 10 MB of hard disk Up to 16 slots for IBM compatible cards
Carrying Case	Attractive case with accessory pockets
Multiplan ¹	Hyperion enhanced
123 ¹	Hyperion enhanced
IN-SCRIBE	Word processor

¹Visi Calc is a trademark of VisiCorp

²Word Star is a trademark of Micropro International Corp.

³Data Base II is a trademark of Ashton Tate

¹Multiplan is a trademark of Microsoft Corp.

¹²³ is a trademark of Lotus Development Corp.

Training for the IBM® Personal Computer Makes Using the IBM® PC Easy.

The IBM® PC is one of the best personal computers manufactured, but it still takes a considerable amount of time to learn how to use. That is . . . until now!

Cdex Training for the IBM® PC Personal Computer makes learning how to use the IBM® PC straight-forward and efficient. In an hour, you can master the material on the Cdex disks and begin using the IBM® PC.

It's tough to learn to use a computer from a book. That's why Cdex Training for the IBM® PC is contained on three disks and is:

Highly Interactive . . .

Creating a dialogue with you and serving as your personal tutor.

Completely Self-paced . . .

You set your own learning time.

Graphically Oriented . . .

Remember, a picture is worth a thousand words.

Usable Now and Later . . .

A clear and concise training and reference program for the first-time or experienced user.

Cdex Training for the IBM® PC and all other Cdex Training Programs are available at your local computer dealer. See how effective a Cdex Training Program can be; ask your dealer for a demonstration.

Cdex™ Training Programs are available for:

The VisiCalc® Program
The WordStar™ Program
The SuperCalc™/SuperCalc™ Programs
The EasyWriter II™ Program
How to Use Your IBM® Personal Computer
How to Use Your Apple® IIe Personal Computer
How to Use Your Texas Instruments Professional Computer
Managing Your Business with the Lotus™ 1-2-3 Program
Managing Your Business with the MULTIPLAN™ Program
Managing Your Business with the VisiCalc® or VisiCalc® Advanced Version Program

Managing Your Business with the SuperCalc™ or SuperCalc™ Program

The dBASE II® Program
IBM® PC DOS 2.0
DB Master™-Version 4

CIRCLE 161 ON READER SERVICE CARD

BY THE end of the week, the stock is out of the basement and the money is on the way.

as the Boston Computer Society's Data Base User Group. The sort of relational job they require can be accomplished with dBase II, but only with programming. This programmability is the source of the power and flexibility of dBase II. Raymond is convinced that even though his introductory-level college COBOL is rusty, a variety of dBase II add-on products exists to cut programming time. Also, if all else fails, a growing number of pre-programmed dBase II application packages

are available, as are programmers to create a fully customized solution.

Since Ashton-Tate, the dBase II publisher, offers a 30-day money-back trial period, it's hard to resist giving it a try. After receiving the program, Raymond becomes dissatisfied with the tutorial section of the manual and immediately orders the dBase II User's Guide from SoftwareBanc. This gets him going and provides well-documented examples. The book dovetails with the reference section of the dBase II manual and the working examples supplied on disk. Programming principles long forgotten are thankfully applicable here, and within 2 weeks Raymond is convinced that dBase II can handle his inventory and receivables. As evidenced by the examples included with the program, it is possible to write a menu-driven sales-tracking and customer database that is easy enough for Bob and the office staff to use. And this program will allow the sales information to interface completely with the invoicing and inven-

tory functions.

After working with dBase II for a month, Raymond realizes that he needs something to take the tedium out of designing screens for the menus he is creating for each accounting and sales database module. (See Figures 7 and 8 for screen displays of a sample accounting module.) There is no lack of add-on software for dBase II; apparently many other users have found themselves in the same position. Standard Software in Randolph, Massachusetts and SoftwareBanc in Arlington, Massachusetts turn out to be good sources of dBase II products and support.

Though certainly not the only program-driven relational database manager on the market, dBase II, with its large number of users and corresponding degree of support, is a popular choice for many in a situation such as Bob and Raymond's. For someone not daunted by the amount of time required to program dBase II, or the money required to buy support software or hire a programmer, the power and flexibility of dBase II is an undeniably appealing combination.

1-2-3 for a Sales Manager

A small software company is enjoying success even greater than predicted in venture-capital circles when their product was first conceived. No one knows this

ENTER PURPOSE LETTER: :

RAYMOND
realizes that he needs
something to take the
tedium out of designing
screens for the menus he
is creating.

better than its enthusiastic if slightly worn-out sales manager. Though anticipating the inevitable return of the market to a less hysterical state, he must, in the meantime, keep up with the demand.

The sales manager does not want to do any programming. His micro experience is limited to being a reasonably proficient VisiCalc user. Though he's beard of the

fantastic capabilities of a programmable relational database manager, he doesn't need a program to handle more than one file at once. As long as he can do reports from his daily sales log, he's satisfied.

The manager's assistant will input the data from invoices generated by his sales

HOW COULD a database manager be reduced to a grid of rows and columns?

staff. This daily input will total approximately 50 items of information about each record or transaction. Primarily, his output will consist of reports summarizing his daily transactions. These summaries will be based on multiple criteria selections—say dealers in New Mexico who sold more than 25 units in April. (See Figure 9 for sample directory display.)

After reading several articles about Lotus Corporation's 1-2-3 he decides to check it out. He makes an appointment with someone who seems knowledgeable and arrives to find a machine loaded with an automatic demonstration of the program reserved for him. With its lightning-quick sorts and selections, this "limited database" he's heard about actually looks very impressive.

He's having trouble, however, even conceiving of a database manager that looks so much like what he's come to associate with a spreadsheet. After all, how could a database manager be reduced to a grid of rows and columns? He's accustomed to a database where everything except the items he's specifically requested is hidden in memory or on disk. (See Figure 10 for sample worksheet display.)

When the salesman comes by his work station, the concept finally sinks in. "Oh, sure, the database is fast and very flexible," the salesman cautiously concedes, "but that's because it's all taking place in RAM. You'll be limited if you don't have a lot of memory." This comment, pointing out the risk of using the program, has the effect of clarifying for the sales manager the concept behind this database. He realizes that it's as if you took the typical data-

base, with its indexes, records, fields, and cross references all tucked neatly away in carefully-marked sections of the disk, and plastered it all over RAM.

Since his machine has 320K RAM, the sales manager has no doubt that it can handle up to 400 records. That he gets integrated spreadsheet and graphics capabilities and a limited memo-generating word processor are compelling reasons to go with it, too. Without even looking at the \$500 database that the salesman wants to show him, he places an order for 1-2-3.

Within a few days he's using the spreadsheet part of the program intuitively. The context-sensitive Help screens allow him to hit a help button at any time and get a brief explanation of the syntax or logic of the program at that point. The

VisiCalc-style menu of choices is more elaborate and yet easier to work with, and the file-handling capabilities allow him to execute all the most common DOS commands without even typing a filename.

Creating the database is similar to setting up any other database, but again, slightly odd, since the setup and data entry takes place in full view. Each row represents a record, and each column represents a field. Therefore, depending on the computer's memory capabilities, the manager can have up to 256 fields in a maximum of 2000 records. By adjusting the column widths, he determines the size of the fields of each record. He can include equations easily and in no time at all has a database designed and ready for input.

When his assistant gives him the daily

Figure 9: 1-2-3 screen showing File Manager Menu and Directory display. Menu describes 1-2-3's version of common DOS functions. Users can do all these things (except renaming) without typing file names.

Model #002 in Natural Oak

SECURITY: The Compucart is the first computer workstation to provide security for both the hardware and software. Simply return the keyboard to the closed position, close the doors and roll down the double walled tambour door and one key locks it all up.

ERGONOMICS: The keyboard and the focal distance to the display are adjustable to suit the individual needs of each user. The user simply places the work directly behind the keyboard and in front of the display in the normal line of sight virtually eliminating unnecessary reach and head/neck movement. Even the pitch of the work is adjustable. With the Compucart you need not compromise your comfort.

MOBILITY: Since the Compucart is on four twin wheel casters, you may move the computer terminal from place to place to take advantage of the multi-tasking abilities of the hardware. With its compact size (requires 4 sq. ft. floorspace) the Compucart fits into any existing environment, allowing you to use the computer in places that you thought just didn't have the room.

MORE INFORMATION: Give us a call toll free at 800/237-9024 or ask your computer or office furniture dealer to call for you. We have the only computer workstation that will keep it all securely together for you.

CIRCLE 19 ON READER SERVICE CARD

COMPU-CART[®]

transaction input for the first week, he loads it onto the screen. If all he wants is a list sorted by state and by dealer, it takes a half-dozen keystrokes for the menu steps, plus pointing to the two fields with the cursor. He gets his two-level sorted list instantaneously. And if he wants a list of the activity this week in Texas, he simply tells 1-2-3 to print that specific portion of the sorted list. The margins, type size, headers, footers, and page numbers can be easily specified, too.

Suppose he wants a summary report on activity in a given region or at a given volume level. He would specify the fields to select on and then use the summary statistic command to get totals of the numeric field. To summarize sales in the Southwest to dealers who have sold more than 25 copies, he would define three variables: the input range, the criteria range and the output range.

The daily transactions data that were input by his assistant represent the input range. He steps through the menu, then points with the cursor to indicate the coordinates of this range. Then, for the criteria range, he goes to a blank area of the worksheet and types in the fields he wants to select (in this case, states in the Southwest) and his selection criteria. Then he

AS MORE
programs assume the
existence of machines
with greater RAM
capacity, the interface
between user and
machine will continue
to improve.

goes to another blank area to design his summary report formats. He uses the tab and end keys to zip all over the 256-column by 2048-row spreadsheet.

To specify the input range, he simply tells 1-2-3 what the two corners of his database are. To specify selection criteria he types in the fields to be searched and the search definition. He then inputs the section location. In another blank part of

the worksheet he creates the output range for the records that meet the selection criteria. In this area he types in as many or as few of the fields in his database as he wants to include in the report.

With one keystroke the selection process is accomplished and he is looking at the records that meet his criteria. At this point he can summarize still further and create another summary report based on the previous one. That is, he can turn this "output range" into another database. He can sort it by salesman or search it for particular salesmen.

A section of the manual describes a way to program 1-2-3 to assign a series of commands to a two-keystroke combination. In what is essentially a rudimentary—if somewhat complicated—programming language, 1-2-3 allows you to create your own menus. This makes it possible to present an almost transparent 1-2-3 to the person entering the data.

If the sales manager uses only the simple print formatting, he will produce printouts perfectly appropriate for his purposes. By engaging the easy-to-use graphics module, however, he can include charts and graphs in his reports. Also, by saving to a printer file, the database summary can be used with any word processor, including the rudimentary one supplied with 1-2-3.

It is possible that in the future the 2000-record limit could be a problem. But at the moment it's working the way he works.

A Smorgasbord of Data Managers

As more programs assume the existence of machines with greater RAM capacity, the interface between user and machine will improve. Also, as more machines are sold, increasingly varied information management needs will be met by programs more powerful, less expensive, or just plain unique.

A program called *Informo I* from Abacus Data in Jacksonville promises to be menu-driven as well as programmable. It will feature relational powers formerly associated only with the most expensive and solely-programmable relational database managers. Designed to handle the kind of large database made possible by hard disks, this program can still be learned easily and tailored to fit a wide range of needs.

A program called *FileMaster* from NF

Systems in Atlanta costs \$125, but has a range of capabilities equal to those of programs at four times the cost. A unique tree-structured information management system called *Questext* from Information Reduction Research in Concord, Massachusetts, goes a step beyond the filing approach by addressing the educational

A **RUDIMENTARY**
form of the artificial
intelligence
community's "expert
system" can be devised.

aspects of information storage and retrieval. Since one level of the tree can always be a "question" level and the next level an "answer level," a rudimentary form of the artificial intelligence community's "expert system" can be devised for everything from planning a wedding to teaching new staff members the ins and outs of your office procedures.

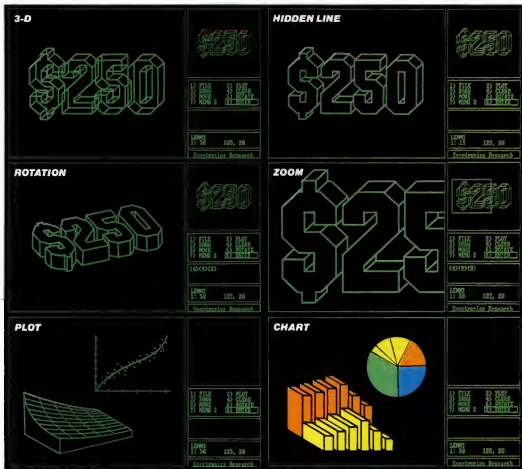

We have examined five work scenarios, analyzed their diverse information-handling needs, and reviewed five popular products chosen for the jobs. These particular programs are unique only in that they have managed to cope with the infamous bottleneck of distribution in the micro industry and have made their way to retail market. It should not be too difficult to find copies of them to look at in stores near you.

Then too, four out of the five producers will allow you to try before you buy. This can be the best way to get a look at a program and see whether it will meet your needs.

There are at least two dozen more packages available to consider and many more in development. Buying clubs and user groups, periodicals, and books such as *Kruglinski's Data Base Management Systems* (Osborne/McGraw-Hill) are other good sources of information.

It is possible to avoid feeling overwhelmed by the information in your life. If you can analyze your needs, you can find the right program to help you manage your information. /PC

IF YOU'RE CONFUSED ABOUT BUYING A PERSONAL COMPUTER, HERE'S SOME HELP

Computers come in two parts.

One part is the "hardware," the machinery itself. The other is the "software," which tells a computer what to do, the way a driver tells a car what to do.

Without software, a computer can't do anything. And vice versa. You have to buy both.

Buy the software first.

Since the reason you're buying a computer is to get the capability the software gives you (remember it's the software that tells the computer what to do), it makes good sense to pick the software first.

Start by making a list of the things you want the computer to do. Possibilities include word processing, inventory control, accounting, graphics, recordkeeping—you name it, there's probably software that does it.

Next take your list into a computer store and ask the salesperson to demonstrate software that will do the things you want.

Even though you'll need a computer for the demonstration, keep in mind the computer is just a vehicle. The software is the driver. Once you've decided on software, picking the rest of the computer system will be that much easier.

The simpler the better.

Some people will tell you that software has to be complicated to be powerful. Nothing could be further from the truth.

Good personal software should be, as the computer people say, "friendly." Meaning that it helps you do what you want to do without getting in the way.

Good software keeps the complications in the computer, where

they belong. And keeps the capability at your fingertips. It's that simple.

Simply see for yourself.

You can read any number of interesting books and magazines about personal computers. You can ask your friends who have them.

Or look at all the sales literature you can get your hands on.

But as helpful as that can be, there's no substitute for a live demonstration.

When you do go shopping, we recommend you take a look at the PFS® Family of Software.

Designed the way we think a software family should be: simple, straightforward and powerful.

Currently there are four software packages in the family: PFS:WRITE, PFS:FILE, PFS:REPORT and PFS:GRAPH, with more on the way. Here's a little more about each of them.

PFS:WRITE. The simplest way to get your message across.

PFS:WRITE is ideal for people who want to make their writing time more productive. It displays what you write on your computer screen so you can make revisions as you compose.

With WRITE, you can correct misspellings or substitute one portion of text for another, with just a few keystrokes.

And when you're through revising, WRITE shows you "on-screen" just how your document will look when it's printed. So there are no surprises afterwards.

WRITE also works with most popular software programs, including the PFS Family of Software.

This feature allows you to add names and addresses from mailing lists to generate form letters. Or combine columns of numbers or graphs with your text.

PFS:FILE. The simplest way to get organized.

FILE is basically a paper filing system without the paper. So you can record, file, retrieve and review information in a fraction of the time it takes with a conventional filing system.

With FILE, you arrange your information on a "form" you design yourself. And when you need to track something down, FILE sorts through your records electronically. It lets you retrieve information in a variety of ways so you can be as selective as you want.

PFS:REPORT. The simplest way to sum it all up.

REPORT is a powerful analysis tool that works with FILE.

REPORT sorts through your files and retrieves the information you're looking for. Then assembles it all into one report, so you can analyze, plan and make better-informed decisions.

REPORT is also good at math. It quickly sorts through columns of numbers and performs calculations, so you won't have to.

PFS:GRAPH. The simplest way to spot trends.

GRAPH is ideally suited for professionals who need charts or graphs in a hurry.

All you do is specify the kind of graph or chart you want and enter the information. GRAPH does the rest.

GRAPH transforms columns of facts and figures into pie, line and bar charts so you can spot trends quickly and make better-informed decisions.

GRAPH works with PFS:WRITE, PFS:FILE, VisiCalc® files or data entered directly into the computer. And supports most popular printers and plotters.

Send for our Free PFS Software Catalog.

It'll tell you more about the PFS Family of Software and how to use it.

It's free. And all you have to do to get one is return the coupon below or see your participating PFS dealer.

The PFS Family of Software.

We've already made computers simpler to use.

Now we're making them simpler to buy.

How to get the most out of your color graphics board.

Powerful, versatile, colorful, fun.

Businessmen, artists and even kids can use PCCRAYON for creative color graphic displays.

- Create animated presentations
- Generate hard-copy of drawings
- Add drawings and symbols to your own programs
- Create your own type fonts (one upper and lower case special type font included)
- High or medium resolution graphics
- Some source code included

"You will become completely captivated by this very cleverly done piece of software. PCCRAYON is another winner for the Personal Computer and I would rate it as an outstanding value for the PC owner with color graphics."

Bruce Churchill,
Software Acquisition Manager,
Capital PC Users Group

CIRCLE 345 ON READER SERVICE CARD

Early desktop database managers were cumbersome and impractical tools. The best of those now available incorporate impressive gains in program design and execution.

5 DESKTOP MANAGERS

Ask a typical PC owner why he purchased his computer and he'll say he needed a word processor, or a spreadsheet, or a communications terminal, or a program development tool, or just something to tinker with in his spare time. Then after a second or two, he'll probably get a dreamy look in his eye and add "of course, one of these days I'm going to throw together a database that will totally organize my business and personal life ..."

It's almost irresistible. Lurking within every PCer is the thought that this humming beige box can take a desk that resembles the bottom of a teenager's closet and, with a few simple keystrokes, transform it into a model of efficiency and order.

Executives neck-deep in manila folders long for the sound of softly beeping electronic files in totally paperless offices. Writers wax rhapsodic over hypothetical systems that could spew out, at the touch of a button, every note they've ever scribbled on leg waxing to Balinese monkey dancers. Salesmen's eyes grow wide as they concoct marketing strategies based on the ability to dive into thousands of digitized customer records and emerge with the names of every blond, left-hand-

ed female knickknack purchaser with a brown dog.

Software houses all across the country that have already flooded the market with seemingly identical word processing packages are now stamping out database management systems by the dozen. Their timing couldn't be better. When the PC was first introduced in 1981 you could order a system with a scant 16K RAM. Now the new motherboards for the XT and the PC are socketed for 64K RAM chips—which you can purchase today for \$3 to \$5—and XTs roll off the assembly line stuffed with a generous 128K.

Even though IBM still includes a cassette port on all its garden variety PCs (now really—how many users have ever stored a single byte of data on a cassette tape?), and offers inefficient single-sided floppy disk drives that can salt away a meager 160K, the PC and the XT can now shuffle 22 million bytes of data. The new IBM hard disk can read and write information ten times faster than IBM's standard floppy. Users are beginning to browse in earnest for database managers that will take full advantage of such storage.

Dominating The Market

Many experts agree that integrated packages, like Lotus's 1-2-3, MicroSoft's

MultiPlan, or VisiCorp's VisiOn, will dominate the business and professional market in the future. These programs allow users to move data back and forth between modules such as spreadsheets, word processors, databases, and even graphics systems, without excessive disk switching. They each provide standardized commands common to all of the modules, so that new instructions do not have to be learned for each procedure. And they make storing and moving information relatively painless.

Then there are the major league stand-alone databases, the best known of which are Condor and dBase II. These are very fast, very powerful, and very difficult for

many users to learn. There are several interesting-sounding new packages, such as Informo X, which claims to be menu-driven and idiot-proof, and Seed, which is said to address and sort a potential 5 billion records. The market is becoming saturated with database managers of varying quality and ease of operation. To use all of the IUS EasyFile package, for instance, you have to juggle seven single-sided disks. If General Patton were alive today, he'd slap it.

The trouble is that none of these database managers is very well suited for everyday office use. The fully-integrated

software comes close, since you can insert a single disk in the morning and work with that one package's various modules all day long. But why should someone who is never going to have to use a spreadsheet have to pay for a program that includes one? And while these packages are internally consistent, they are not so flexible or easy to operate as they ought to be.

UtopiaWare

The ideal desktop manager would be lightning quick and a snap to learn and use. It would make extensive use of function keys, and would execute all instructions from whole-word menus with single keystrokes. Menus would always be accessible in varying degrees of complexity so that new users could get immediate, detailed onscreen help, while experienced users could dispense with them or see abbreviated versions as reminders. Menus would also be intelligent enough to know exactly where you were in the program so they could offer specific help, rather than just general information on how the whole package is assembled.

Such a database would contain its own top-drawer word processor, and interface smoothly with existing word processors, spreadsheets, and other popular utilities. The program would operate in the background so you could interrupt it and run other utilities if necessary, then return to the main program without having to reboot. It would allow users to create large numbers of separate file categories, each containing records of virtually any length. These files could sprawl over onto multiple disks, and could be rapidly indexed and sorted, with prompts to insert data disks at the appropriate times.

The program itself would be written in a relatively low level language like C, would perform all its functions speedily, and would reside on only one disk. It would work with all common printers, make efficient use of all the memory the PC can handle, and change its display to color when it recognized a color monitor. It would contain dozens of utilities for importing and exporting data, splitting and merging files, updating indexes and creating cross-indexes, sorting and searching records, and prioritizing information in a variety of formats.

For instance, if you wanted to index certain records with key words, the program would scan the entire file and list all of the words in your files in decreasing order of frequency. It would automatically delete such common shorter words as *and* and *the* and *to*, listing the rest on your

WE'RE STILL in the software dark ages.

screen, and highlight any proper noun, since personal and company names and addresses are all prime candidates for indexing. You could then move a cursor down this onscreen list and turn any or all of these into key words with single strokes. You would also be able to identify key words as you entered them, if desired. Ancillary cross-indexes could then be created without destroying the original.

Such a program would also be able to search through files for strings of characters not identified as key words, and would be smart enough to compensate for spaces, punctuation, and capitalizations in the usual places. It would also know to check for misspelled variants of key words. It would allow data-entry templates to be created and revised without much fuss, and then stored conveniently. It would also recognize certain limits, jumping to the next field, for instance, after the last digit of a telephone number or zip code is entered.

Software producers should study what kinds of databases in which formats are widely used, and include templates in the package to speed data entry and retrieval. A name/address/phone directory that could print mailing labels and fill-in letters would probably head the list, followed closely by a daily calendar/scheduler, a customer contact record, and a free-form card file to index things like magazine articles. *VisiDex* tells users how to do just that.

Ideally, a businessman could boot up his desktop manager, see at a glance what appointments or reminders he had that day and in the days ahead, then call up a main menu with a single keystroke. He

could then hit one key to open a file and begin entering text, identifying key words—again with one key—as he worked. At any time he could freeze and store what he was working on to reach his calendar, look up a phone number, type out a letter, or switch to another file. A single keystroke would bring him back into his original file.

If he wanted to scan an index, the businessman could create a window in the screen and scroll quickly down it or jump from entry to entry. Or he could simply tell the program to search through all the files and call up every sentence with the words "tax credit" in it, one at a time, in an onscreen window. If he found a reference in his files that he wanted to incorporate into the text he was working on, he could hit one key and the data from his files would automatically be appended. When the businessman finished, he could file the new document away by itself, add it to an existing file, put it in a queue to be printed later, or print it on the spot. As a bonus, he could perform a word frequency analysis to identify overused words and to let him add the most often used words to his key word index.

Stacking Up

None of the programs reviewed here provides all the features mentioned above. The Desk Organizer comes the closest. It handles virtually every one of these jobs well, and throws in an automatic telephone dialer. But it won't handle massive data files or do string searches. (And none we've seen perform word frequency analyses.) Still, it's a gem. Superfile handles information from as many as 255 disks in one file, is very flexible, and works well with WordStar. *pfs:FILE* is astonishingly easy to set up and use, and gives the user such helpful options as the ability to tack on an extra note even if there is no room left on his template. The Foresight Data Manager makes good use of the PC's function keys, handles unusual formats well, and can search files for spelling variants. *VisiDex* has a good tutorial and comes in a nice box.

We're still in the software dark ages. Businessmen are not going to toss out their desks and file cabinets en masse and replace them with flickering consoles until computer operating systems and the programs themselves become far more

powerful and simple to use. Wall-engineered packages such as The Desk Organizer are a step in the right direction. But computers—even the 3-year old PC with its aged 8088 CPU—are capable of much more. And with so many software developers going elbow-to-elbow for the business huck, the number and quality of desktop database managers should increase dramatically in the near future.

The mechanical bride is a long way off; The mechanical secretary, perhaps only a year or two.

The Desk Organizer

Conceptual Instruments Company
4730 Warrington Ave.
Philadelphia, PA 19143
(215) 726-7858

List Price: \$250

Requires: 82K, 2 disk drives, 80 column display.

The first thing you notice about The Desk Organizer is that it won't do a thing until you take the plug-shaped "key" that comes with the package and insert it into the cassette port located at the back of the PC. You can copy the disk to your heart's content, but without this security device all the duplicates you make are just rust on plastic.

(A version that will work on the PC-XT—which has no cassette port—is expected shortly. This upgrade will revert to a more traditional copy protection

display the company logo. In fact, it takes about a minute and a half before the program is fully loaded and ready to go. If you need quick information and are accustomed to programs that are up and running in a tenth of the time, this can be a nuisance. The package's designers say this is a function of the limited amount of space on IBM single-sided disks, and that with a double-sided floppy the program will load in under 3 seconds.

Highly Integrated

Don't get me wrong. The Desk Organizer is a dandy little package. If you don't have to shuttle back and forth between it and WordStar and SuperCalc all day long, you can boot it up when you buy your PC and leave it on until the day you trade your system in for a PC2.

The designers of The Desk Organizer threw in everything that normally sits atop a businessman's desk except the picture of his wife and kid. It is a combination mini-database/alarm clock/printing calculator/telephone dialer/memo pad/Rolodex/appointment calendar. And it deftly integrates all these elements so the automatic dialer can, for instance, get a telephone number from the Rolodex; or so the appointment calendar can automatically trigger the alarm clock.

Conceptual Instruments president Fred Collopy spent more than 5 years polishing this program to make it as easy to use as possible, and the effort shows. He started developing The Desk Organizer after an attorney who had hired him as a consultant asked if it were possible to "just type something into the computer, touch a button, and have it stored." Collopy studied the structured data handlers available at the time, and concluded that virtually all had been designed without considering the daily needs and routines of the typical businessman.

He scoffs at complex programs that force busy executives to learn arcane file handling commands, or that try to be all things to all people. "What people actually do at their desks is not what programs like VisiOn claim they do. It is crazy to assume that everyone needs a spreadsheet and a word processor. What most people need is something to schedule their time, and file away information, organize it, and make it easily retrievable. The majority of our users have assistants or associates

who operate word processors and spreadsheets for them."

Training Big Wheels

Collopy stresses that programs like VisiOn are correct in establishing a common command structure for all operations. In fact, his very first sale was to VisiCorp. And he also agrees that the future of

I
IT IS CRAZY
*to assume that everyone
needs a spreadsheet and
a word processor.*

computing is in integrated programs: "The busy executive will have only four or five software packages. Software can't be purchased like record albums where you keep buying dozens of new disks; the bottleneck is the training required."

"It doesn't make much sense for a businessman to buy separate calculator and phone dialing and memo writing and data handling programs when one package could handle them all. Different programs force users to learn and remember different command structures, and switch disks back and forth all day long. And users may have trouble taking the information from one set of programs and using it in another." Collopy believes that by the end of 1984, the biggest category of business software will be highly integrated desk managers.

He adds that the true test of a good desk manager will be its flexibility and invisibility. "If it's done right, users will each see it from their own vantage points. Stockbrokers will think the package was developed expressly for stockbrokers; beadhunters will think they're buying one made for personnel counselors; lawyers will assume they're buying a desk manager that was built around the needs of a legal practice."

Just Desserts

"The truth is that most desk tops are fairly similar and that most businessmen require the same basic kinds of organization and tools," Collopy claims. But as important as analyzing the needs of busi-

C

effort shows.*

scheme, and will take full advantage of the PC-XT hard disk.)

Once you insert the plug, you watch it boot ... and boot ... and boot ... and boot. The program is written in the 8088 assembler and UCSD Pascal, and has to load in a customized version of the p-System run-time module before it can even

nessmen and devising software to accommodate those needs is coming up with the proper feel of a program. IBM is starting to implement this idea of invisibility or "virtuality" with DOS 2.0 by allowing users to treat hard disks and floppies almost interchangeably. The storage medium is incidental; all the user needs to know is that data is being stored somewhere and can be easily retrieved.

The same is true with all other program elements. Or, as Collopy puts it, "users don't care if the system works by integrated circuits or rice pudding. All that is important is that commands are consistent and easy to remember and that the entire package is simple to use and gets the job done more efficiently than without the computer."

But while a business program should not force users to master the complexities of operating systems, it should be flexible enough so that special needs and applications can be implemented if desired. Anyone—and he doesn't have to be a tweak freak—can change the way any of the commands in The Desk Organizer works, or personalize important toggles and variables in the program, using the built-in Alter function. However, Collopy has spent the last 2 years fine-tuning the operation of his program so that no major customization is really necessary.

During this period he has seen a pronounced shift in programming philosophy. "Years ago, software developers would beat their brains out trying to add higher and higher levels of complexity to

gram. After a certain point, users—especially busy executives under time pressure—feel they've figured out enough and put the book on a shelf." This makes it imperative to streamline the command structure and the overall operation of the program as much as possible.

Bare Essentials

Collopy claims that The Desk Organizer will eliminate virtually all of the usual clutter on the average executive's desk: "All you'll need is your computer and a telephone." It replaces an appointment calendar, a file card system, a calculator, a notepad, a clock, and a telephone dieler. But what makes the program so flexible and easy to use is that data does not have to be entered according to any preset formula. You aren't limited by predefined date fields. You just type in any information, hit a key to file it, then assign a label to it. At any point you can scroll through the many indexes you've set up to see what has been stored where.

The main screen is divided into seven windows. Time is displayed continuously in the upper right hand corner and the status of whatever you're currently working on in the upper left. The clock strikes the hour with springy, subdued notes that sound vaguely like muffled grandfather clock chimes. If you turn the alarm feature on, two musical notes will appear to the right of the time. When you first boot the program, a reminder is displayed in the status window that you can get help simply by hitting the Ctrl key. You may ask for assistance at any time, and the help screens are clear and to the point.

The Desk Organizer is so user-friendly that you are encouraged to turn it on and play with it almost before you open the manual. The advanced palette of Help commands makes this possible. When you ask for help on entering the program, the first screen starts with, "You are at the outer command level of the program..." and goes on to tell you how to explore additional program features, as if starting up an adventure game. As I stepped through the various screens, I almost expected to read, "A nasty dwarf appears from the shadows and throws an axe at you!"

Peel Me A Screen . . .

You can easily learn how to operate the system by sampling the help menus. Help

operations, like all the others in the program, require only single keystrokes. And you can escape from commands at any time by hitting the Esc key. When you exit a help screen, the message is erased by a cinematic wipe—the words sort of peel away. If there was already something on

THE DESK
Organizer is so user-friendly that you are encouraged to turn it on and play with it almost before you open the manual.

your notepad, it peels back on as the help message peels off. Very classy.

Between the time and status windows is the "command area," which displays a menu made up of real English words, not the indecipherable abbreviations used by some programs. To select a command, all you have to do is enter the first letter of any word on the menu. There are two main menus, and you can easily switch back and forth between them simply by tapping the space bar. When you first boot the program, the "function" area below the status window contains a calendar showing the current month, and highlighting the current day. To its right is an index with one entry highlighted.

The large area below all these windows is the notepad, which holds up to a dozen 80-column lines, and fills most of the screen. The notepad is where existing files are displayed and new ones are entered. At the very bottom of the screen is a data gauge (spelled "gauge" throughout) that measures how much storage space is left on your data disk.

The index automatically alphabetizes the labels you assign to any of the notepad entries as they are filed, and displays seven of them at a time. You can scroll up or down through the index by using the cursor up and down arrow keys. The Home key will take you to the first entry, and the End key to the last. The left and right cursor arrow keys display the names

their software in an effort to show what programs could do. Now the trend is to say "what can we strip away to make it simple?" "He notes that this must be reflected in the documentation as well as in the program. "An overly thick manual hurts sales, and discourages users from learning some of the advanced features of a pro-

IF YOUR PC DOESN'T TALK TO YOU, IT'S TRYING TO TELL YOU SOMETHING.

It's trying to tell you to try ScreenPlay™ software.

If you were playing our newest games for the PC, your computer would be talking to you. Right now. No hardware. No modifications. Nothing but speech synthesis, right from the disk.

People think you'd need a degree in electrical engineering to get great, high-quality speech synthesis on your PC. And that was probably true until these programs hit the market.

Believe it or not, you got all you needed for speech synthesis when you bought your PC. You don't need to buy a single piece of hardware.

The potential has been there all along.

Our software is just smart enough to take advantage of that potential.

But these aren't humdrum programs that need speech to make them exciting. These are games that could stand on their own merits on ANY computer.

Take our first game in the Warrior of RAS series, DUNZHIN.

It's been a ScreenPlay™ best-seller for quite a while now on other machines.

Randall Don Masteller is a role-playing wizard. He brings the world of fantasy created by role-playing games to micro-computers. His games contain all the excitement and suspense you've seen only in board games—at least until now. The speech synthesis is just icing on the cake.

Or the glint on the sword.

Similarly, those whiz kids at Computer Applications Unlimited decided there was a sad lack of decent arcade-type games for the PC.

We said, in effect, "If you're so smart, then you do better."

They did. Their response was CZORIAN SIEGE, one of the most original arcade games to hit the home screen since IBM's smallest computer was the 360. Colorful, unpredictable, unlike any computer game you've ever seen—or heard. You'd skip lunch to save your quarters for this one if it were in the arcades, even if it didn't talk to you. Come on—give it a try.

SPEECH SYNTHESIS Direct from Disk!

ScreenPlay™. Our programs speak for themselves™.

DATAEASE™

The Complete System To Organize Your Business The Way You Want It

You can start using it in minutes, and within hours have a complete application.

It Is Easy to Use:

- Fully menu driven to remove the guesswork.
- Full use of function keys with the assignments always displayed. All cursor movement and editing functions on the keyboard are supported.
- Provides full color support and screen style customization.

System Features:

- A list of users can be kept, with passwords and security levels.
- The print style is customizable.
- Data can be interchanged with mainframe computers, other data bases or spreadsheet programs.
- Data base back-up and restore functions are integrated to reduce errors.

System Requirements:

- Available on IBM-PC, DEC Rainbow and other 16 bit computers. Requires 128K of memory and 2 disk drives.
- Supports floppy or hard disk drives.
- Supports all popular printers.

It Provides

A Complete Range of Features:

- Lay out your forms on the screen. Define data-entry fields anywhere by answering simple questions. Revise the forms any time without losing data.
- Easy, fast and accurate way to fill-in the forms and enter, view or revise records.
- The reports or transactions requirements are defined in the English-like query language by answering simple questions. Select records any number of ways, combine up to 5 forms per report, perform calculations, get totals, sub-totals, or statistical summary. For complete transaction processing, delete, modify or enter records.
- Reports are automatically formatted in several ways, or specify your own format using the Report Editor.
- To format a report complete with text, data, and graphs, use the optional WORDEASE™ word-processor or the GRAPHEASE™ graphics facility.
- Display or print the report output, or take it to your spreadsheet, word processing, or graphics programs.
- Organize the access to your forms and reports by setting up your own menu.
- The underlying Relational Data Base Manager provides efficient storage and retrieval of records. It uses B-tree indices for efficient accessing of records, and cache memory to retain the most recently used disk sectors to reduce disk access by 50 percent.

of other indexes on your disk. To jump to these you just tap the Enter key. You can also jump directly to any entry in an index by typing in the particular label or part of a

ITS A REAL pleasure to use a program based on single keystroke commands.

label you want and then hitting Enter. Again, very nicely done.

From Ada to Ziller

The Desk Organizer comes with six sample indexes: Collocations, Printers, WATS numbers, Journal, Reference, and History. Collocations gives you 14 preset formulas to calculate such things as the future value of an investment or the monthly payment for a loan. Printers explains some of the advanced printing features of Centronics or IBM/Epson printers, and lets you toggle them permanently on or off. WATS Numbers gives you a short directory of toll-free airline and hotel phones. The Journal index comes without any entries, and is meant to provide a place to store records of past appointments and trigger the alarm for upcoming ones. Reference gives you a screen of instructions on every one of the package's 31 main features. History gives you several dozen thumbnail sketches on computers, from Ada and al Kashi to Thomas Watson and Irving Ziller.

Once you find something in the index you want to examine, you hit the R key, the first letter of the Recall command. It's a real pleasure to use a program based on single keystroke commands. The disk hums and clicks and the note flashes onto the notepad. For instance, scroll the History index toward the beginning, tap the cursor arrow once or twice to highlight "al Kashi," and in a second or two you see:

Jamshid ben Mas'ud ben Mahmud Ghiath ed-Din al Kashi, a fifteenth century Persian mathematician and astronomer, invented a set of devices for computing planetary conjunctions.

Hit J and jump to another label, type in "Zi" and hit Enter, and the index moves to and highlights "Ziller, Irving." Touch R and the screen fills with:

In 1953, IBM set up a project under John Backus to develop an automatic code to simplify programming. This resulted in the Speedcoding System. Backus then joined with Irving Ziller to develop another system. The Formula Translating System (FORTRAN) was released in 1957.

This particular index also contains the cross-reference labels "Backus," "FORTRAN," and "[1957]." To add cross-references in your index you simply hit the X key and then type in the additional entry. By hitting the I key, the calendar will disappear and be replaced by a list of all the indexes on your disk, with the one in use underlined.

Time Is Money

You can create up to 20 separate indexes, each with a flexible number of entries. The width of each entry determines the number of listings the index can store. With labels 20 characters wide, an index will hold only 110 entries. If you can live with 7-character labels, you can store 255; if you need thousands of listings all in one or two categories, this is the wrong program for you. Most businessmen can put all of their appointments, memos, and Rolodex listings handily into 20 indexes, each with 100-200 listings. If you know you'll need more than 200 phone listings, simply create two: one for personal numbers, and one for business.

Most of the notes and memos written by businessmen are time-related. Jobs have to be finished by certain dates, follow-up calls have to be made, orders have to be entered, conversations and letters have to be logged in, bills have to be paid and collected, appointments have to be scheduled. The built-in calendar tracks dates with ease from the first through the ninety-ninth centuries. The program lets you page through your calendar a day, week, or month at a time—or jump directly to a particular date. Best of all, any screen of information with an entry in the appointment index automatically triggers the calendar-reminder feature. Special ap-

pointments can trigger chimes or graphic displays.

Adding It Up

The Desk Organizer also includes two sophisticated calculators with eight registers and up to nine decimal places. The calculator can read formulas from the notepad, evaluate them, and assign the results to the registers. The program makes it easy to change the number of decimal places or switch back and forth between fixed and floating point modes. And, as expected, there are several nice touches. The program knows the values of pi and e. It lets you calculate certain trigonometric functions either in radians or degrees. And it toggles a little # sign at the bottom of your screen off and on to tell you which state your NumLock key is in.

The Desk Organizer can also recognize telephone numbers in your files and dial them automatically using a Hayes auto-dialing modem. This feature is extremely easy to use: You simply scroll down your index until you find the name you want to dial, and then hit P. It will only dial the first number listed in any file; this limitation will be corrected in future editions.

The function keys are preset so that you can add the current date and time to any file simply by hitting F9 and F10. Other function keys print the index label of the file you're working on, or the value of whichever of the calculator's registers happens to be active. You can attach up to

THE BUILT-IN

centuries.

an entire screen of information to any of the PC function keys.

While it produces p-Systems files, the package contains simple utilities for importing and exporting standard DOS files. However, this process is slow. To bring in files, the program reads 12 lines at a time, fills the onscreen notepad, stores the screen, reads in another 12 lines, etc. These transfer utilities also allow data to

be moved from file to file within the program.

Smart Where It Counts

Conceptual Instruments President Fred Collopy claims that "The Desk Orgo-

THE DESK Organizer sets a new standard of ease in the way it allows you to customize most of its processes.

nizer is always smarter than you expect," and this is not just advertising puffery. The help function is excellent and will be even better, he claims, on double-aided disks. It senses where you are in the program and what kind of help you need, and then provides full instructions on how to proceed. You really don't even need the manual.

There are other intelligent features. If you make an error when using the calculator, the program will point to the part of your formula or calculation that is giving it the problem. You can format disks or adjust printer controls from inside the program. Certain "soft" errors are corrected automatically.

One of the package's most impressive features is its ability to customize most of its operations. By hitting the Alt key and then the first letter of almost any command, you can see what steps are part of each procedure, and then change them to suit your needs. Throughout the entire program, any serious changes and deletions trigger a two-step verification check—and only then alter the defaults.

But it's The Desk Organizer's ease of use that should make this a winner. To quote from Collopy's advertising:

Sitting at your desk you hear a pleasant tone. Glancing at your video display, you notice a reminder to contact an important client. You pick up the telephone and touch a button on your keyboard. The call is placed. While the number is ring-

ing, you touch another key, recalling notes from a previous conversation. During the call, you page through an appointment calendar, schedule a meeting, review and revise on agenda, then generate a memo about it all for circulation to a selected list of associates. When you've finished the call, you touch a key to update your phone log.

The Quality Shows

The Desktop Organizer works exactly as advertised. The only problem with the above process is that you're limited to a 12-line memo. The next version, expected this summer, will allow you to fill an entire 60 lines, or the equivalent of an 8½ × 11-inch page. It will also give you a full screen editor with advanced reformatting, let you store more than one index in memory at a time, boot 30 times faster than the current edition, provide a far more comprehensive help index, allow the calculator to use complex variable names and threaded logic rather than registers, handle color monitors, and run in the background so you can operate other programs at the same time.

After wrestling with dozens of cantankerous, slipshod programs, I breezed through this one. It is clearly a program that was engineered rather than just churned out. Single keystrokes tap you effortlessly from task to task. Seven windows simultaneously display all the features you need without clutter or confusion; it's like looking at a well-designed aircraft cockpit. The program bristles with intelligent help screens that know what you're trying to do at every stage of operation, and provide detailed assistance at the flick of a key. The Desk Organizer sets a new standard of ease in the way it allows you to customize most of its processes and define the PC function keys. Instead of crashing to a halt, it corrects certain errors automatically, and highlights others you've made. You can learn how to use it quickly without even opening the manual. My review copy worked flawlessly. Conceptual Instruments throws in a 12-month warranty, and provides a year's worth of free updates.

There's really nothing quite like this package anywhere else. Much of the software on the market today seems to have been slopped together with little regard for

the user: Menus are often clumsy or nonexistent, instructions bewildering, manuals indecipherable and even incorrect, and overall operation a pain in the fingertips. But The Desk Organizer is a class act. Its current version is almost fun to use; the updated edition expected later this summer should be a genuine pleasure.

pfs:FILE

Software Publishing Corporation
Distributed by IBM
Boca Raton, FL 33432

List Price: \$140

Requires: 64K, one disk, 80-column monitor.

The microcomputer revolution has sparked a grammatical revolution as well. Software manufacturers somehow think that good products will be better if their names have odd punctuations, alternate spellings, jarring ellipses, or bizarre capitalizations. Half the programs on the market seem to have an uppercase letter imbedded somewhere in the middle; many of the rest are either all capitals or fully lowercase.

It is disconcerting, therefore, to open the manual provided by pfs: and see that even the manufacturers can't keep these unnatural spellings straight. On three successive covers the package is called pfs:file, but once inside it's referred to as pfs:FILE. Then, on top of that, the first message to greet you is "Use this publication only for the purpose of operating your IBM Personal Computer pfs:FILE application." What else did they have in mind? OK, these aren't earthshaking problems,

IBM SHARES the copyright, and it shows.

but they don't exactly inspire confidence.

Once you start poking around inside it's a different story. IBM shares the copyright, and it shows. The text is concise and well-written, pages are artfully laid out in

**USI MultiDisplay
Card offers:
IBM Monochrome
support, Color/
Graphics support
and Parallel
Printer Adaptor
all on a single
expansion card.**

Other features include:

Flicker-free scrolling (no more flashing during scroll)

Full 32K on board memory (creates an extra page of hi-res graphics)

External switch (or software) selects color or mono modes.

True DMA capabilities in all modes.

May be used in conjunction with another MultiDisplay Card or IBM Video Card for simultaneous Display on Monochrome and Color Monitor.

Until now, two expansion boards were required to have the options of using an IBM Monochrome and a composite video or RGB monitor. By putting these two functions plus a printer adaptor on one board, the USI MultiDisplay Card leaves one more slot open for future expansion and costs less.

Look for the USI MultiDisplay Card at your local computer dealer.

QUADCHROME™ BY QUADRAM® DOESN'T DRAW THE LINE AT COLOR GRAPHICS

If you have an IBM PC you don't have to sacrifice color graphics for high quality resolution. Because now there's Quadchrome by Quadram. A monitor that displays graphs and charts plus accounting and word processing projects with flying colors.

Quadram is an RGB high resolution color monitor that delivers an 80 character, 25 line text display. And 690(H) dots x 480(V) lines resolution. Not to mention, 16 brilliant colors.

With a monitor that gives you such an excellent screen image and a rainbow of colors to choose from, all your applications will be picture perfect.

You'll find this .31 mm dot pitch CRT is both FCC and UL approved. And backed by a tradition of Quadram Quality.

Get the color monitor that really gets down to business. Quadchrome by Quadram. It's the only monitor your IBM PC will ever need.

the familiar black end green, and the peckage comes in IBM's standard D-ring binder. Best of all, the program works like a charm, although it could be far better with certain slight improvements.

Extra Strokes

The manual begins with an excellent introduction that shows how to install and back up the program. (Unfortunately, you can make only one copy of it.) It mentions that *pfs:FILE* "operates on the principle that information is kept, as the word implies, in forms," and gives you a bit of form theory. And it does a thorough job of explaining the verities of IBM file names and the functions of the IBM keys. Each chapter begins with a table of contents and ends with a brief summary; all manuals should be this clear.

The program is menu-driven. At almost any point you can hit the Esc key and return to the main menu. It allows you to perform seven operations: designing a template for the file, entering data, copying the file, searching or updating, printing, deleting records, or exiting. For some reason you have to hit the Enter key after typing in the number of the operation you want. The program's designers should have structured it so that a single key-stroke would make the necessary selection.

Once you've selected an operation, the

***pfs:FILE MAKES
extensive use of the
tab and function keys,
so much so that I
suspect the program's
designer was left-
handed.***

program asks which file you want to work with. It then stores the file name so you can perform additional operations without having to specify the name of the file again. Here again, the programmers should have included a step asking which disk your files are on. To put files on your B disk you have to specify B:FILE-

NAME.

Left-Handed Compliment

pfs:FILE makes extensive use of the tab and function keys, so much so that I suspect the program's designer was left-handed. The tab jumps you from one heading to the next, cycling back to the first one when you get to the bottom of the screen. Virtually every other operation is performed by hitting the F10 function key. When entering information, the F5 and F6 function keys stamp the file with the date and time automatically—a nice touch—and F2 prints out the screen after you're done. All these functions are listed on the bottom line of the screen.

When you print out files, you are given the option of including or deleting your headings; although when you omit the headings, it doesn't reformat your information. On the printout, the date is indented as if the heading were invisible, but still taking up space on the page. This yields a ragged, rather unattractive hard-copy record.

The defaults are displayed onscreen and are easily adjustable. If you want, you can tell the program to print DOS files to a disk. This is handy as the program is written in Pascal and doesn't ordinarily produce DOS files that can be handled by other PC utilities. You can also print multiple copies at the flick of a key. It will also let you sort the files as it prints, and skip over any fields you want to omit from your printed copies.

You can copy the template, the entire file including the template, or selected files, to another disk. Copying selected files lets you split your file if it's getting too cumbersome, or create smaller sub-files. For instance, if your main file contained customers from all over the country, it's a snap to spin off a file of California clients only, or California clients who spend more than \$500,000 and who are not wholesalers.

If you set up your files properly, the first word or number in each file becomes a keyword. The program can really sprint through such a "first item exact match" to retrieve a particular file, scanning across a thousand records in 3-5 seconds. Sequential string searches take far longer. If you instruct *pfs:FILE* to look for a particular combination of characters, it can take 2 or 3 minutes to examine an entire disk. How-

ever, allowing such string searches frees you from having to construct elaborate keyword indexes. And if your files are only a few hundred records long, any search will be fairly rapid. The program queues up any matches it finds, so you can bounce from one to the next with ease.

One More Thing . . .

Each "form" can hold up to 32 screens

***YOU CAN'T USE
the tab or Esc keys as
you normally would on
the PC.***

of information, and you can cram 2200 screens on a disk. One of the nicer features is that while you can create a template with specific headings (name, address, salary, date of employment, comments, etc.) *pfs:FILE* allows you to add an "attachment" page as an afterthought if you run out of space under a heading or need a new heading for one particular file.

As you enter information, the program automatically wordwraps, so you don't end up with bizarre fragments at the edges of your screen. However, it will not wrap from one screen to another; you have to hit the PgDn and PgUp keys to move from screen to screen. One small problem is that you can't use the tab or Esc keys as you normally would on the PC, as these control program functions.

pfs:FILE does a good job of searching for matches. If you are looking for a certain character string, it will ignore spaces before the first character of the string and after the last character. It treats multiple spaces within the string as a single space, and allows you to mix upper and lower case letters. Insert two dots before a string to be searched and the program will ignore any characters appearing before it in your files. Put the pair of dots after your string and it will ignore trailing characters. Put dots before and after and *pfs:FILE* will find every such string on your disk.

A Likeable Sort

Numerical searches are equally well-designed. The program recognizes com-

mas, dollar signs, dates, and times, end can easily sort all files entered two mornings ago that contain transactions greater than \$10,000, for instance.

AN APPENDIX *does give you precise instructions on handling such DOS functions, something few programs do well.*

You may add information as you search. If you want to update all the records you entered in January, you can pull out the first one, make corrections or additions, and then move to the next one, fix it, hit a key and move to the third one and so on. The program will automatically save the revised information.

Adding a slash turns the search mechanism around. By hunting for /B.. you'll get every item that does not begin with the second letter of the alphabet. /.. will call up all vacant files. One quirk is that if you delete the first three files on your disk, then enter new information, the first file will begin with number 4. File number 4 will take up the space previously occupied on the disk by file number 1. Once you erase file number 1, you will not be able to call any subsequent file number 1. This sounds confusing, and it is.

pfs:FILE allows you to delete files a little too easily. While it does provide a warning message asking you to confirm your deletions, it erases files in toto. If you want to eliminate all of your California files from 1982 that were not repeat customers, it will happily do so without much fuss. But there may be files that fell into this precise category that you wanted to save, and unless you remember to save them ahead of time you might end up watching in horror as the program fleshes all such screens before your eyes and wipes them clean. One more reason to back up your data disks.

DOS Boot

You can easily create a printed index

by sorting and printing out one item, like a name. But you can't do this onscreen. Another peculiarity of the system is that it relies on DOS for much of its lower level file handling. pfs:FILE does not give you a utility to erase a template, for instance. It lets you erase all the information in each file, but if you want to remove the actual blank form, you have to exit the program, erase the file with the DOS command, then restart pfs:FILE. In addition, there is no disk directory. It would have been easy for the programmers to insert two more choices on the main menu: one that displayed your files, and one that deleted files no longer needed. An appendix does give you precise instructions on handling such DOS functions, something few programs do well. You'd expect this from any IBM product, and you get it here.

You are allowed a great deal of latitude in setting up your templates, and are advised to think about what future needs you might have before you commit them to magnetic memory. Creating a new template and funneling old information into it can be a tedious and complex task.

The manual includes sections on dealing with nonstandard printers and on calculating how many forms you'll be able to shoehorn onto your disk. It would have been a nice touch for pfs: to have put this formula in the package so that the program did all the mathematics for you. One nice feature is that the appendix not only lists and explains the few error messages generated by the program, but offers corrective actions. Why doesn't everyone do this?

All in all, pfs:FILE is a model program. It is absolutely a snap to learn and use, and it would be hard to find a better manual. It is flexible where it counts, does virtually everything advertised, and moves along at a decent pace for a database that relies primarily on sequential searches (although the manufacturers admit it could be faster). However, for certain applications, it requires the services of a companion program, pfs:REPORT.

It was probably smart to split the program responsibilities like this, so that users who didn't need the additional power of pfs:REPORT wouldn't have to fork over the additional \$125. But since the two complement each other so neatly and do so little on their own, users might feel they should get one entire package for less

than the total cost of both. It is important to stress, however, that pfs:FILE works just fine as a stand-alone package.

Visidex

VisiCorp
2895 Zanker Rd.
San Jose, CA 95134
(408) 946-9000

List Price: \$250

Requires: 64K, one disk drive, 80-column monitor.

VisiDex exhibits all the makings of a winner—the classic VisiCorp packaging job, the slick, gorgeously typeset manual, the top-drawer graphics and layout—until you boot up the disk. Not that it's a bad program. With sufficient wheezing and struggling and head-scratching, you can get VisiDex to do everything advertised. But if you need a smooth, efficient desk manager, you may want to keep looking.

The manual is excellent, though slightly unwieldy. It is well thought out and laid out, but filled with much more information than you probably need. Should it really take 180 pages to learn how to use a fairly humble screen filing system and calendar? Granted, the manual provides an extensive tutorial, glossary, index, and reference section, but the beast is unne-

SHOULD IT *really take 180 pages to learn how to use a fairly humble screen filing system and calendar?*

essarily formidable. In fact, the package is bound in vinyl stamped to resemble elephant hide, and the metaphor is apt. VisiDex is somewhat powerful, at the expense of being ponderous and slow. There is a setup module on the disk called "runner," the name of which is the only part of the package that's quick.

Standing Tall

Another manual quirk is that it sits

about three-quarters of an inch taller than the standard IBM issue, giving your bookshelf a somewhat ragged look. Still, it is quite readable, and ladders along accurately and understandably.

If only the program itself were as clear.

UNECESSARY *double keying is precisely what programmable function keys were designed to avoid.*

The first thing you notice is the famous VisiCorp cryptic horizontal menu. VisiCorp obviously wanted to retain the system used in VisiCalc and its entire stable of products. Its edit screen greets you with a cheery / UP DN LF RT BS HOME TAB INS DEL CTRL (HOME FBVEKXRY LF RT). Sure, once you know the program you'll understand most of these commands. And by hitting Ctrl+Y you get a slight amplification of some of the more obscure ones. But user-friendly it's not. And this from a company that has gotten much ink over its forthcoming VisiOn package that's purported to be so chummy you'd lend it money if it asked.

The program could not possibly have been designed with the PC in mind. A handsome drawing of the keyboard shows and labels the IBM function keys, but that's the last you'll hear of them. Which is peculiar, since many of the program's operations require holding down the Ctrl key before striking a letter. This kind of unnecessary double keying is precisely what PC programmable function keys were designed to avoid. If VisiCorp felt it important to use the Ctrl key so that users of its other products would not have to learn new fingerings, it should have at least duplicated some of the more important commands using the function keys. Even WordStar does this.

In the Raw

In addition, you first have to prepare data disks with the PC Format command,

then load VisiDex and "initialize" these formatted disks with a separate VisiDex command. Why can't the VisiDex program simply start with raw disks? To its credit, the manual does show you exactly how to handle both formats. Some programs simply assume you know your way around DOS.

Another indication that VisiCorp wanted this package to be all things to all systems is its selection of wildcard characters. If you want to search for a particular key word, you can use an asterisk (*) and minus sign (-). However, if you're accustomed to the MS-DOS wildcard system, you're bound to become confused. In DOS, an asterisk stands for a variable number of wildcard characters, and a question mark for just one. In VisiDex however, the asterisk substitutes for one and a minus sign for a variable number. While these problems are not earthshaking, it is a nuisance to have to remember peculiarities of various programs like this when it would have been so easy to standardize such things.

And these are not isolated examples of sloppy engineering. A good part of your time is spent shuttling between various menus and listening to your disks spin. In fact, certain commands fire up your drives and keep them whirring merrily away for seemingly interminable periods. If the sound of a read/write head scraping across iron oxide is music to your ears, then this is the program for you.

To its credit, VisiDex is loaded with safeguards to prevent you from losing your data. When you revise a screen, for instance, it gives you the option of saving the new one or the old one or both. Still, you can wipe out all your work by changing disks at the wrong time, and although this is mentioned in the manual, there is really no protection against it in the program itself. This concern for your records is admirable, but goes overboard. When you want to delete lines, you have to kill the line and then stop and wipe out a buffer. In fact, there were so many reminders and warnings, I felt I was handling something radioactive.

Glued to the Keys

Operation of the program is relatively straightforward, but cumbersome. It allows you to create data-entering templates fairly expeditiously. But when you start

entering data, you end up glued to the Ctrl key again. There are 83 keys on the IBM keyboard; you'd think they could have reserved one for jumping from heading to heading when entering data. The way VisiCorp has it set up, you have to simultaneously hit the Ctrl key at one edge of the keyboard and the right cursor key at the other edge—a spen of 17 keys that makes touch typing a thing of the past.

Creating key words is fast and relatively painless. You may set up multiple and multi-word indexes to any screen. Text can be highlighted in inverse or fleshing video if desired for emphasis. For some inexplicable reason, tab positions cannot be changed. Editing is not difficult; neither is destroying data at the edge of your screen. "Push" text past the twentieth line or the seventy-ninth character of any line and it's gone forever.

VisiDex bills itself as a "personal information and calendar manager." It assumes your need for personal information will never extend past one screenful of characters at a time. This limitation is not so constraining when VisiDex is used as a calendar. You can throw appointments onto a screen and file them all away with a note reminding you to check them from one to fifteen days ahead of time.

Storing and retrieving these "keydate" screens is accompanied by the usual VisiDex cacophony of disk clattering and

EEDITING IS NOT *difficult; neither is destroying data at the edge of your screen.*

switching. After months of use, my Tandon drives sound like garbage cans banging down a steep hill, and the program's incessant disk chatter is jarring to the extreme. As with most databases, the speed of the program would be much improved and the disk racket eliminated by using an electronic RAM disk. However, you'd have to be scrupulously careful about transferring your data to a floppy before turning the computer off, or you'd lose it.

Call Me In 1999

VisiDex can display a calendar of any month from January 1970 through December 1999, and even suggests that you prepare separate disks for future years. By the time 1999 rolls around, or even 1985, the floppy you prepared today may be a museum curiosity. Still, it is a handy feature to be able to see—or print out—calendars within these three decades, along with any appointments you've electronically penciled in. Even better, as soon as you boot the program, it automatically flashes appointments and reminders for that day.

At the conclusion of the tutorial, the manual steps through three practical applications, showing you how to set up a customer service log, an index of magazine articles, and a directory of names, addresses, and comments ("LIKES TO THINK HE IS GETTING A DISCOUNT... NO CREDIT—KNOWN TO SKIP TOWN") that will also print mailing labels and maintain a list of phone numbers. These are actually fairly handy, although a bit complicated to create.

The program has two ways of hunting down information: slow and slower. You can specify only 30 key words per file; to index data after that you have to do string searches screen-by-screen. Key word searches are not too bad since they use an index on the disk; to look for a particular

the option of including or ignoring template headings. A gatefold page in the manual charts the operational flow of the operation of the program and spells out all the options. You can type characters directly from the keyboard to the printer to give your printer special commands or type titles on a page.

On balance however, the unnecessary complexity, need for multiple keystroke commands and separate disk formatting, restrictions on file sizes, and overall sluggishness make this just one more program that will be swept aside by forthcoming generations of flexible, speedy, friendly software written expressly for the PC and its successors.

Superfile

FYI, Inc.

4202 Spicewood Springs Rd., #204

Austin, Texas 78759

(512) 346-0133

List Price: \$195

Requires: 64K, two disk drives, 80-column display and any standard word processor.

Superfile is a "back-end" database manager with several startling qualities and one rather unsettling premise. It doesn't allow you to enter data through the program itself; instead, you input your information through WordStar or EasyWriter or some other word processor that produces ASCII or quasi-ASCII files; then you use Superfile to massage your data.

This allows you to index letters as you write them, print them out using your word processor, then sort and file them away with Superfile. Its authors created the program this way because they realized any other data entry method would essentially force them to create their own word processor. This would have increased the cost and complexity of the package, and was probably unnecessary, as most potential users already have a word processor.

Superfile has one of the most sensible manual formats on the market. You can actually learn how to use the program in 10 minutes. The documentation steps you unerringly through both the simple demonstration provided, and the subtleties of each command. And it presents the instructions in a fairly foolproof manner.

However, the manual measures 8 1/2" x 11-inches rather than IBM's standard 8" x 9 1/2-inches, and its printing job won't win any gold medals.

S ***SUPERFILE HAS one of the most sensible manual formats on the market.***

Each double-page spread is divided into three sections. The left third of each spread shows exactly what appears on your monitor when the program asks you to do something. The middle third tells you precisely how to respond. The right third explains what is occurring, how many options you have, what the parameters are in each command, and what will happen next. This is a clear, tidy way to teach operation of a program. Every page is well-labeled, and the comments are well thought out and very friendly.

One glaring problem, however, is that Superfile was obviously translated quickly from CP/M. The manual opens with a special note to IBM users instructing them to "ignore all references to CP/M, and simply use DOS 1.1." This doesn't matter much when the manual refers to CP/M peripherally, and some of the more important changes have already been made on the disk. For instance, the manual lists an option on the main menu as "Return to CP/M," but on the disk (and on your screen), you'll see "Return to operating system." However, there are places where this is not consistent. After you've stepped your way through the initial demos you're congratulated and then instructed to "PIP" your copy of the main program. MS-DOS beginners might waste hours scrambling through their manuals in a futile effort to learn what this means.

Superfile commands require single keystrokes only. You can tap your way through a series of hierarchical menus in a second or two; many programs on the market require that you first hit a key to select an option, then hit Enter. Superfile is generally very fast. It will sort through 100 items a second, checking against any tangle of ands, ors, and nots you propose.

Y ***OU CAN TYPE characters directly from the keyboard to the printer to give your printer special commands, or type titles on a page.***

set of characters one screen at a time might take until December 1999.

But there are many intelligent features as well. The page default when printing out a file is 22 lines, allowing three screens to fill each printed page. Backing up a data disk compresses all your information into the smallest possible space. When printing out screens you are offered

The Ultimate Solution

QUIKCOM

Bell 212A Compatible
1200 bps/300 bps
Modem Communications

\$ 495.00

At last! Fast, reliable 1200 bps communications without the inconvenience or expense of an external modem. With the QUIKCOM board in your IBM PC, simply plug the PC directly in to the telephone line for 1200 bps or 300 bps communications at a cost that is significantly less than today's most popular modem packages.

All communications, auto dial and auto log on features are menu selectable using the QUIKCOM software diskette included with each communications board. The most user friendly modem communications system available anywhere.

QUIKCOM is a complete communications package to be slotted directly in your PC in place of the RS 232C card, and requires no additional asynchronous communications software, no external modem or cable.

QUIKCOM has evolved from Wolfdata's extensive line of quality communications products. It was designed exclusively for use with the IBM PC, and features the most advanced reliable communications design available, with four powerful microprocessors on board for high speed error correction.

For further information or for direct telephone ordering, please call Wolfdata, Inc. at (617) 250-1500 or write to 187 Billerica Road, Chelmsford, MA 01824. Master Card or Visa Welcome.

HOW TO CARRY YOUR IBM-PC FOR MILES

Introducing the Colby PC-1™ Conversion Kit—for IBM-PC performance in a portable package. Start with a standard IBM-PC. Add the Colby PC-1—a compact, 26-pound portable unit that houses its own 9-inch display and power supply. Transfer the system board, disk drive and PC boards from your IBM-PC (they fit neatly inside the Colby). With the help of the standard IBM-PC keyboard (it's plug-compatible)...the Colby PC-1 is ready to go (and perform).

Portability is only minutes away. The Colby PC-1 Conversion Kit includes everything you need to "portable-ize" the IBM-PC—in less than an hour and with only a screwdriver. (If you prefer, you can have the job done by your local participating Computerland.™) And since the Colby has its own display and power supply, you only have to make the conversion once.

It's almost like getting a portable computer for free. We can supply a new "system" mother board for your IBM-PC—to replace the one transferred to the Colby PC-1. So instead of having to buy an expansion chassis, your IBM-PC chassis steps in to do the job. Add an interconnect cable between the IBM-PC chassis and the Colby PC-1 and you have a total of twice the plug-in slots of either unit alone.

Another extra—just plug your IBM-PC display into the Colby...and enjoy the use of both displays simultaneously.

WITHOUT MOVING IT AN INCH.

Convenience plus. With the IBM-PC and the Colby PC-1, you get an unbeatable combination of sophistication and portability. That's convenience. And since both systems use the same

hardware, software, and keyboard, you only have to learn to operate one system. That's convenience plus.

At \$499,* the price of the Colby PC-1 is especially "plug-compatible." Think about it. If you own an IBM-PC, you can add the portability of the Colby PC-1 for much less than the cost of a separate, comparable system (we're not even sure that a comparable system exists).

If you're looking for your first computer, the Colby PC-1—coupled with the power of the IBM-PC—could offer the extra mileage you've been waiting for...at a cost that won't leave you short.

There's more to come from Colby Computer.

Watch for the Colby PC-2—complete with its own snap-on keyboard and dual 5-inch disk drive capability (these items will also be sold separately to enable you to upgrade your Colby PC-1)...two new PC Stik™ joysticks...a PC plug-in 300-baud auto-dial modem...plus other IBM-PC compatible products...all available soon.

RSVP. Please write to us for data sheets and ordering information (prices are introductory offers, subject to change without notice). If you missed seeing the Colby PC-1 in action at Comdex '82, visit us at the Eighth West Coast Computer Fair (San Francisco, March 1983).

Paper Tigers

The program allows you to use hard disks, and includes a straightforward program customization module to handle problems such as odd printer requirements or nonstandard screen sizes. Superfile even lets you run the program in reverse video if you want. Other utilities provide you with sorting, merging, file splitting, file renaming, and character replacing capabilities.

The manual is chock-full of well-illustrated examples and suggestions for ways to use the program, as well as lessons and theory on setting up an efficient database. Oddly enough, it asks you to create a paper-and-pencil log of key words; the first rule in its "Guidelines for Managing Information" is to "keep notes." This may reduce errors, but many computer users question the need to maintain separate hard copy files. Why couldn't such a log be set up electronically?

Another devil is that certain file markers need to be typed in as uppercase characters. This shouldn't be necessary. And, since the program uses a slash (/) to separate key words, you can't insert a slash within a key word. CP/M must be written as CP-M. Why couldn't the program's authors have used a backslash (\) instead? Finally, if you're turning a long phrase into a key word, you must not let it "wrep" from the right side of the screen to the left, or the program will index it as two distinct key words. These bugs are all identified in the manual, however, so you are sufficiently warned about them.

The manual contains a directory of error messages, a glossary, and a decent index. Most operations described in it are preceded by half a dozen caveats, introductions, organization indexes, samples, setups, and sections describing the "flow" of procedures. By the time you get to the operation itself, you feel as if you've been thoroughly briefed by a government intelligence unit.

Full of Routines

If you search for a key word that is not in the index, the program will offer you several other key words with similar spellings, a handy feature. It will also do fast wildcard searches, where you give it certain characters and ask for all key words that contain that sequence of characters.

Superfile is full of other routines and utilities to search, sort, and manipulate information, and can perform a wide range of data handling operations. However, it does not update files very well. FYI is about to release an improved version called Superfile System 3 (SS3) that will handle updates with ease. SS3 will also

***BY THE TIME
you get to the operation
itself, you feel as if
you've been thoroughly
briefed by a government
intelligence unit.***

allow 65,000 key words rather than the 3,000 allowed in Superfile 1. It will double the number of key words you can string together in a logical search from 64 to 128, and the number of key words per record from 250 to 500. A new simplified operation will re-index all records in the entire database. SS3 will come with an optional utility to sort and bang out mailing labels.

What Superfile—and every other database—really needs is a utility to perform a word frequency analysis of each record. This would allow users to see which words occur frequently enough in their text to be candidates for key words. If such a feature were menu-driven, the user could scroll down a list of frequently-used words and turn any of them into key words with a single keystroke. In addition, Superfile would be far easier to use if key words could be entered with a single keystroke as the user was entering text.

A Snappy System

A search feature that would search by string in addition to key word (as in Visi-dex) would also be helpful. And there is one glaring flaw in this package: If you make changes in any one record, you have to re-index the entire database. You can add a new record with revised information that will be reflected in the index, but you cannot delete the incorrect record from the index.

In short, Superfile is a snappy information manipulation and retrieval system with a much clearer than average manual and several fairly advanced features. It is not a full-fledged database however; you have to enter information using a word processor that creates ASCII files. It allows you to file, index, and cross-reference documents as you create them with such popular programs as WordStar or EasyWriter. It even lets you design your own templates for such word processors, which makes data entry fast and easy. It handles records of any length up to 255 disks, and interfaces neatly with Mailmerge-type programs. With one or two minor improvements Superfile just might live up to its name.

The Foresight Data Manager

Foresight Software

P.O. Box 5196

125 East Carpenter Freeway, #660

Irving, Texas 75062

(214) 556-1251

List Price: \$199

Requires: 128K, 2 disk drives, 80-column display.

OK, I have to admit, this program really piqued my curiosity. You've probably seen the advertisement: an Einsteinian curved-space checkerboard retracting upwards into a vanishing point of puffy cumulus clouds from which a handful of buoyant carved wooden letters spill out at crazy angles. Well, if the software didn't make it, I could always hang the picture on my wall.

I was also wondering what kind of software comes from a post office box on a Texas freeway in a town named "Irving." When I first saw this address I scrutinized the cover of the magazine I was reading to make sure it wasn't a Mod or Notionol Lamppoon takeoff. When I opened the manual I almost had to check again.

Who writes these things? This one opens with: "Welcome to an exciting, new world of information management for you." I could hardly wait. After a short section plugging the package's various features (some of which, I admit, sounded pretty terrific), the purple prose picked up again: "Gardeners can create 'Plant Identification Cards.' Football fans can create

WHAT KIND of software comes from a post office box on a Texas freeway in a town named "Irving."

their own 'Player Specs Profiles.' How will you use your Foresight Data Manager? Your only limit is your imagination." I reached for the Dramamine.

"Hot Enough for You?"

Maybe the actual instructions were clearer. I turned the page. Nope. The first set, on getting started, refers befuddled novices to Section 2 in the IBM manual; then it warns: "Make sure your computer is operating properly before you insert your Data Manager program. A computer that is overheating or has some other problem might damage your diskettes." Perhaps this is to get the company off the hook if the program doesn't work. You're having problems? Could be your computer is overheating. Have you tried immersing it in ice water? Or maybe a frosty bottle of Lone Star? Then more effusive lingo: "After you are comfortable with your computer, you must perform a favor for Data Manager..."

At this point I thought of giving the software the heave-ho and digging into something easier to work with, like Eosy-Writer 1.0. But I slogged on; things were getting amusing. First thing the program does is ask if you want to change any of the system options. And it makes you hit an Enter after the Y or N—e bad sign.

Monochrome vs. Black and White

Another bad sign: One of the questions Foresight Data Manager asks is whether you have a color or monochrome monitor. I stopped and ran the program on a color monitor to see what the display would look like before I instructed the program to change from monochrome to color. The image was strictly black and white. So I reran the installation program, and at the proper prompt told it to switch to color. Then I ran it on our RGB color monitor. The image was still strictly black and

white. This did not bode well. Since black and the IBM gray/white are hard to read on a color monitor, I reconfigured the program for mono and answered all the other installation questions. The disk groaned and hummed for a few seconds and then printed a line in the middle of the monitor: "Mount Program Diskette #1." I could almost smell the dusty Texas rewhide. "OK, boys, mount 'em up and move those PCs out. Yippee-ti-yi-yo..."

Following the directions, I copied the files onto a formatted disk. One small problem: these are b-i-g files. The good ol' boys who wrote them used good ol' compiled BASIC, which often produces miles of code for even the simplest operations. The package we were sent came on double-sided disks. If you have single-sided drives you're in b-i-g trouble. If you have bad sectors on the formatted disk you're in b-i-g trouble. And you have to wedge DOS in beneath them. It was a tight squeeze, but I finally made it.

This didn't seem right. IBM sold a whole lot of PCs with ludicrously inefficient single-sided Tandems; what were the unfortunate owners of these anachronisms supposed to do? I called the manufacturer to find out. Well, shucks, turns out there's a single-sided version too. Didn't know that. Didn't see that on the packaging. Reckon that's hell bent to cause a passel of confusion.

To show how the program works, Foresight includes a sample personal address file. To set this up, you have to type in several long file names. If this were illustrative of how other operations in the program worked I could accept the need for excessive keystroking. But there's a parenthetical note along with this exercise that reads "this procedure is ONLY for use with the Personal ADDRESS example file." So why didn't they include a batch file to do all the disk copying automatically? OK, the disk was tight, but they could have added a 128-byte batch file that does all the work. Or they could have used shorter names, or instructed the user how to copy files using wildcard symbols like * . But no.

So you spend a few minutes shifting files from disk to disk and then type in MENU and voila—a shining inverse-video logo blooms out onto the screen. Now I don't know about your PCs at home or work, but we've put a few miles on these

babies in our office, and the phosphor on our IBM monitors has been scarred by the reams of text that have spun giddily down the screen. So when something pops into the eerie deep-sea floor luminescent green inverse video, we see the ghostly 80-column-by-24-row pockmarks left by various incarnations of WordStar and worse.

Polish or Perish

I have a friend who says you can tell right away whether a piece of stereo equipment is decent or not by its knobs. If the manufacturer wants to skimp, he usually sleeps on some deck made in the Fiji Islands. If he's producing a high-quality package he'll spend the extra few bucks and screw on something precision made out of brushed brass that's damped and hand-milled. Little things like that can really clue you in about the overall quality. This shows in packages like The Desk Organizer where even the smallest details have been pondered over and polished. But The Foresight Data Manager is another story.

The bottom of the screen contains a menu displaying the uses of seven function keys. Well, that looks promising. Above it is a pulsing message to choose an action. So you hit one of the function

YOU CAN
*tell whether a piece of
equipment is decent or
not by its knobs.*

keys—and the whole intricate logo and inverse-video image scrolls up a line. Not the end of the world, but not very classy either. You want to hear more? The menu at the bottom of the screen is a good idea, and the manufacturers should be congratulated for making such extensive use of the function keys. But they're not listed in the conventional way.

On the PC keyboards we have in this office the function keys are each preceded by an F. So the first key is F1, the second F2. However, in this program, the menus ask for 1 or 2. OK, small problem, but it is confusing. Even more confusing is that

Effortless Communication

*Modem and software \$389, cane and bowler hat not included

PC Modem Plus & IBM Personal Computer

Effortless The PC Modem Plus™ system contains everything you need to communicate with the IBM Personal Computer—modem, communications software, telephone cable and complete instructions.

Modem The modem card fits inside the PC, connects directly to the phone line and includes an additional IBM-compatible asynchronous port. The full duplex, auto-answer/auto-dial, 300 baud modem can tone or pulse dial and is compatible with most

other communications software packages. Full duplex 1200 baud (212) operation is available with the addition of Ven-Tel's PC Modem Plus Speed Adapter.*

Software The full featured communications software has auto-logon and data capturing ability. You can store information from Dow Jones News/Retrieval™ or other sources on disk, exchange information with mainframes, minis or personal computers and transfer files to other Crosstalk™-compatible systems.

UNBELIEVABLE!

XCOMP sat down to design a truly distributed IBM network so versatile and complete that it would satisfy any user's needs.

It seems too good to be true, but we did it!

X-NET is so advanced that it can only be imitated. It has all the features of standard networks and many more. And, because it is not dependent on a central file server you save the high cost of that hardware.

Call our sales department today for complete details on X-NET. The exclusive network of PC-DOS 2.0!

X-NET

A Network Superset of PC-DOS 2.0

Other quality products available from XCOMP.

CONTROLLERS

XCOMP manufactures a complete line of controllers for all popular drives. The X/R Series is a controller for 3 to 300 megabyte drives.

We also produce a \$100 controller package. A microprogrammable data board is common to each package and operates with a second drive interface board. Buffer size is 256 bytes, with disk data rate up to 10MHz.

HARD DISK SUB-SYSTEMS

10 megabyte and 16 megabyte hard disk sub-systems for the IBM PC, Apple II and III and nearly all popular personal computers.

XCOMP sub-systems are 2 to 3 times faster than many of the competition's and come complete with our extensive software.

PACKAGE DEALS

Exceptional prices on 10 and 16 megabyte formatted drives and controllers. The ST/S for \$100 computers and the ST/R for single board computers. An optional Z-80 adapter allows for simple plug-in convenience. Optional equipment includes software, cables and cabinetry.

THE TOASTER

THE TOASTER is a hard disk sub-system containing TWO REMOVABLE 3.5", 5 megabyte cartridges. THE TOASTER provides unlimited storage and convenient back-up with true portability. We speed up your disk.

THANK YOU FOR YOUR OVERWHELMING RESPONSE!

We are substantially back-ordered on TOASTERS. We appreciate your patience!

CIRCLE 455 ON READER SERVICE CARD

some screens provide ten menu choices, and label the tenth choice "0" rather than "10." At least these function keys don't have to be followed by an Enter. Virtually everything else in the package does. Why? It's easy in program one-keystroke responses in BASIC. The Enter key makes sense only when the user may need to enter responses of different lengths, for example 2 or 22. But Y or N?

Bugs Galore

So I figure that maybe if I dig into the actual guts of the program it will get better. I follow the directions, then experiment to see what happens if I change my mind and scoot around between menus. Trouble. The first template bangs up nnnn the screen over the company logo. The length of each field is indicated by an inverse-video bar. I'm staring at a message that says "Field Type: Alphanumeric . . . Select Function:" but there's a half-obscured logn peeking out from under several of the fields and a gaping "Versinn 1.0" smack dab in the middle of the screen. And no labels on the fields. OK, I didn't follow directions to the letter. Neither do many software purchasers. Programs should be written to take such errors into account and either flag them with a warning message, or not budge from the menu unless the absolutely proper sequence of instructions is given.

The function keys bounce you from one field to another. Well, bounce isn't exactly the right word; that implies speed.

THE WHOLE
process is achingly
slow, with many checks
and options.

Worse, the program shows which template field you've selected by inserting gray block characters over the appropriate inverse-video bar. Jump from one to the next and the program erases the gray block characters from the old field and puts them down on the new one you've chosen. Except when you work your way down to

the bottom one and then hop up to the top. Sure, it lays down the gray on the top row. But it forgets to wipe it off the one below. And it doesn't discriminate. Crawl to the bottom and the top field fails to erase.

Multi-Strokes for Different Folks

It doesn't get any better. You move from field to field by hitting the Enter key, which is a good feature. But the whole process is achingly slow, with many checks and options, each of which has to be answered by entering a one-key response and then hitting the blasted Enter. On top of this, while the program is smart enough to check for duplicate entries if you tell it to, it won't check until you've entered the entire screenful of data and answered all the required multi-stroke questions. If it's going to make a duplicate-file check, it should do it as soon as you enter the field it checks against. Finally, when it spots an unwanted duplicate entry, it instructs you to "re-add with unique key." This is technically correct, since the program calls the input phasing "adding," but it could be made clearer.

Again, to the program's credit, one function key will call up a help menu—and there are different help menus for each command level. But when you return from the help screen, which doesn't go into enough detail, the cursor is always in a different field from the one it was in before you asked for assistance.

The manual is liberally sprinkled with caveats, in forbidding blocks of underlined or uppercase text, such as: "DO NOT ATTEMPT TO EXECUTE DATA MANAGER PROGRAMS DIRECTLY . . ." or "DO NOT TAMPER OR DELETE THIS DIRECTORY OR YOU WILL LOSE ACCESS TO YOUR DATA FILES." or "A 'RETURN' WITHOUT A FIELD # CAUSES THE PROGRAM TO SKIP TO THE NEXT LINE OF THE LABEL. THE PROGRAM DOES NOT ALLOW YOU TO RETURN TO A PREVIOUS LINE." It is a real plus to be warned about incipient problems like these. But it would have been far better if the Foresight designers had created safeguards and enhancements in the program to take care of such glitches.

Manual Labor

The early sections of the manual are fairly clear and readable. But as it begins

to talk about the program's options (of which there are many) and functions (which seem unduly complex), the prose knots and eventually chokes. The manual is well-illustrated and decently organized, but it moves in fits and starts. It contains

THE MANUAL
is liberally sprinkled
with caveats, in
forbidding blocks of
underlined or uppercase
text.

all the information you'll need on operating the programs, and proceeds in a logical order, but is hard to get through; you won't confuse this with an IBM manual. Its author is well-informed and well-intentioned, but is not, I would guess, a professional manual writer. This package was represented as something a busy executive could use without too much trouble. I'm skeptical.

The program does have its good points. But invariably they are obscured by drawbacks. The template creation program, for instance, is very well-designed and simple to learn and use. It centers headings automatically, gives you many intelligent options, and provides a grid that lets you set up your data fields precisely and attractively. But to get to it you have to first stop what you're doing and go to the menu, watch the main inverse-video logo flicker slowly onto the screen, and hit a function key, only to be told to "mount" another disk.

Faint Praise

In fact, the program contains many praiseworthy features, but even more that need work. Safeguards abound to prevent you from losing or overwriting existing files and templates, but these can be nuisances, and require too many keystrokes. You can define the relative importance of each field for subsequent retrieval; in fact, the program won't work unless you do. There is a profusion of help screens that know where you are in the program and

offer specific explanations, but some of these could be more informative and less filled with jargon. You can, in some instances, zip from operation to operation quickly and without disturbing your data; in others you have to switch disks, reanswer the same questions, punch in extraneous keystrokes, etc.

HELP SCREENS know where you are in the program and offer specific explanations.

The search feature is very powerful, but extremely abstruse. To hunt for a record, you "inquire into" it by hitting a function key. A "Screening Criteria Function Key Panel" (otherwise known as a menu) gives you the usual panoply of logical choices with its array of =, <, and > signs and all the permutations of these. There is one menu selection, "range," that I still haven't quite figured out. Part of its explanation is:

Given these two sets of characters, the Data Record Key Field is compared twice. For the LOW value, you enter the character(s) to be used in the => comparison. After you enter this data and hit Return, Data Manager will then PROMPT you to enter the HIGH Range value. Enter character(s) to be used in the <= comparison. If, for example, in an alphanumeric field, you enter 'D' or 'd' in response to the LOW Range value PROMPT, and 'R' or 'r' in response to the HIGH Range value PROMPT, Data Manager will consider ONLY those Data Records in which data in the corresponding Key Field is either between or equal to one of these values (see Notes 1 & 2).

I wonder when they're coming out with the English version of this.

A Sound Feature

Foresight Data Manager includes a nifty feature called "sound" that will search for records you don't know how to spell properly. If you remember that you entered a file for a client named something

like MecGrumble or MacGrimble or McCremble or McGrymbel, you can use this to strip out the vowels and hunt for anything that "sounds" like MKGRMBL. Very useful and decently-implemented.

You can also look up records by record number, or do selective string searches within data fields. This last option comes in handy when some of your fields are code lines packed with alphanumeric data. For instance, if you code all your female customers who first purchased something from you in 1982 and bought a book on petunias F82BKPET, you could pull out all your female buyers by hunting for the F, or petunia book buyers by hunting for the BKPET, etc.

Foresight Data Manager can produce a wide variety of forms and labels, although, as the manual admits, "the report generating process may appear, at first, to be quite involved." They weren't just whistling Dixie. The complexity is a function of the formatter's power and flexibility. You can pretty much put any information from any files anywhere. But don't expect to churn out sophisticated reports without taking the master's degree outputting (and off-putting) quasi-tutorial in the manual. One bizarre note is that in this and only this process, certain operations do not need the excessive double keystroking found elsewhere in the program. In fact, you can throw the report generator into a tailspin by hitting Enter.

Cold Calculations

The report function can perform calculations on data lists and tables automatically—very nice. There is even a way to take the results from initial calculations and use them in subsequent mathematical operations, giving you the equivalent of a very primitive electronic spreadsheet, although VisiCorp and Sorcim won't be quaking in their boots over this particular implementation.

One of the package's best—but thorniest—features is its ability to print out data in precise locations. This allows you to fill in preprinted forms, form letters, and invoices. But the fat section on how to put this particular "multi-line" formatter through its paces makes the rest of the manual look like a McGuffey Reader. The busy executive will probably take one look at this and hand it over to an assistant he doesn't particularly like.

In theory, a label generation module should be fairly straightforward. After all, how unwieldy can something that prints out a few lines of names and addresses be? The manual starts off its labeling explanation by telling the user: "Just follow these

YOU CAN
throw the report
generator into a tailspin
by hitting Enter.

instructions for a foolproof Label everytime"—and then assaults him with 19 detailed steps sprawling over six single-space pages. Still, everything will work if you persevere.

The package includes a slate of utilities for altering the hierarchy of key searches, importing "foreign" data files (with documentation chock full of screaming bold-face warnings and terse DBMS arcana that is not for the feinthearted), and reorganizing a file—merging it with a different file, adding fields, or changing formats. You receive a lengthy glossary (believe me, you'll need it), and a brief index.

On Computer Boot Hill

The Foresight Data Manager could function as a desk organizer. So could dBase II, or for that matter, two cardboard boxes and a scratchpad. But the programs contained in it are much better suited for the accounting or order departments. It is a somewhat powerful and flexible garden-variety database manager with one or two nice touches. But it is user-hostile in many places, and its manual borders on the inscrutable.

Once you master it you can store and retrieve data fairly well, but in this case getting there is not half the fun. The program doesn't have the power or speed of the major league database managers, and is too complex and ornery to placate an impatient executive who might want to use it to organize his daily routine. In any showdown with the other desktop database managers on the market, this one in its present form will end up on computer Boot Hill. /PC

ONE MEGABYTE MEMORY

NEW
REDUCED PRICES

\$800 EACH

Technical specifications:

Maximum capacity	512K Bytes
Memory device	64K dynamic RAM
Card Size	4.2" x 13.3"
Maximum supply current	500 milliamperes
Maximum access time	275 nanoseconds
JRAM is fully assembled and tested.	
Fully warranted for one year.	
All RAM locations are socketed.	
Memory parity is checked.	
Software controlled hardware pager.	
Memory Relocation on any 64K segment boundary.	

JFORMAT system upgrades give you:

- access to extended **Electronic Disk** using any memory board
- a background **Print Spooler**
- **Ten sector diskette formatting** (for 25% more storage per diskette up to 811,008 bytes)
- capacity to read, write and format any PC diskette on **Quad floppy drives** (TM100-4) with auto format sensing.
- a handler for **8" floppy drive** controller boards for files up to 1,250,304 bytes long
- **High Speed File Transfer**
- the handler source code for **Hard Disk Controllers** made by Corvus, DTC, Datamac, Davong, Teacmat, Santa Clara Systems, Mountain Hardware, Xebec and others

Dealer inquiries invited.

It took hundreds of years to build the world's most advanced spreadsheet.

Way back in 1534, a Venetian scholar wrote a text that standardized the techniques of modern bookkeeping. And up till 1979, there weren't a lot of real improvements in the way people did spreadsheets. You still had to enter all your figures by hand. Run all the totals yourself. And when you had to make a few changes, you had to run the totals all over again.

Then along came a program that let you create spreadsheets on a personal computer. Without touching a pencil. Or adding anything by hand. Best of all, this new program gave you the freedom to look at your balance sheet a dozen different ways if

you felt like it. Because all you had to do was change one figure, and the computer would refigure everything else for you. Automatically.

Like most breakthrough ideas though, this original spreadsheet program had a few things that definitely needed improvement. For instance, all the columns had to be the same width. And the entire system took about 20 hours to learn.

So we developed SuperCalc®, which was such a giant step in the

right direction that it became a best-seller. Over 250,000 copies in only 18 months.

Today, we've gone even farther. After talking with thousands of customers, we've found a lot of important new features you'd like to have. And we've built them into the world's most advanced spreadsheet.

SuperCalc®.

10 minutes to SuperCalc²

Create your first spreadsheet model in 10 minutes flat.

With SuperCalc² you get all kinds of features that have never been possible before. Like custom formatting capabilities. Automatic consolidation. Sorting. And more. Take a look at the spreadsheet below, and you'll see just how much we're giving you.

Best of all, we made it just as easy to use as the original SuperCalc. There's a self-paced starter guide that shows you exactly what to do,

step by step. And an AnswerKey[™] that gives you instant help right on the screen. Because of these features, you can actually create your first spreadsheet in 10 minutes flat. Even if you've never used a computer before.

SuperCalc² is available for the IBM PC and XT. Where it can run in full color. With full memory. Even on hard disk. It's also available for CP/M, CP/M-86, MS DOS and other operating systems, so you can use it with most popular personal computers.

But with all its advanced features, SuperCalc² is the same price as the original SuperCalc. Only \$295, suggested retail. We're also offering SuperCalc for only \$195. And an upgrade to SuperCalc² whenever you're ready.

So, if you've always thought there had to be a better way to do your spreadsheets, stop by your closest computer store. And take a good look at SuperCalc². After just 10 minutes, you won't want to do one more spreadsheet the old way.

REACH OUT...

With AUTOMATED TELEMARKETING

Introducing the Personal Computer Automated Telemarketing system from Arlington Software+Systems.

Now even the smallest business can benefit from telemarketing without special telephone equipment or service. PCAT is a highly efficient system for managing and scheduling the phone calls that are so important to your success.

PCAT IS FLEXIBLE

- Telephone Sales
- Lead Qualification
- Customer Service
- Surveys
- Receivables Collection
- Inquiries
- Fund raising

PCAT IS EFFICIENT

- Stores customer or client information
- Schedules out-going calls by date and time
- Reschedules busy/no answer calls
- Automatic dialing of local, long distance and network calls
- Built in word processor for order confirmation, letters or memos
- Prompter scripts for consistently effective sales or service

PCAT IS COST EFFECTIVE

You'll be surprised just how cost effective PCAT can make your new or existing telemarketing operation. PCAT reduces your marketing costs, increases productivity and ensures that every contact can be followed up by callback, confirmation, or order entry

PCAT IS EASY TO USE

In addition to automatic scheduling and dialing, PCAT uses function key prompts and help screens to guide you through the program. A comprehensive User's Guide is provided.

WHO NEEDS PCAT?

- Retailers
- Insurance Agents
- Stock, bond and commodity brokers
- Wholesalers and distributors
- Customer service or support depts
- Real estate agents
- Accounts receivables depts
- Collection agencies, etc.

HARDWARE REQUIREMENTS

IBM Personal Computer with 128k, at least one diskette drive, 80 column monochrome or color monitor, and a Hayes Smartmodem or Novation Smart-Cat. Printer is recommended.

Get CompuServe FREE with our AST MegaPlus package.

REACH OUT AND TOUCH THE WORLD WITH
THE HAYES SMARTMODEM™, AST MEGAPLUS™, AND COMPUSE™

Don't sit home alone with your computer.

With your free access to the CompuServe information service, you can reach the world: check financial markets, monitor business trends and national news, bank at home, book a flight to Paris, or select the appropriate wine for dinner. And you can do much more, all within the privacy of your IBM-PC.

What you get.

The AST MegaPlus package is here. For a limited time, at a special price, all you need to make your IBM-PC worldly and wise: the new MegaPlus multi-function memory board, the 300 baud or 300/1200 baud Hayes SmartModem, PC Modern Software, SmartModem-to-IBM cable, the 38-page CompuServe User's Manual with access codes, plus five hours free connect time. You'll also receive a monthly newsletter and magazine from CompuServe. And, unlike some videotex services, there's no minimum monthly charge.

Never forget.

We've chosen the AST MegaPlus board over all the others. MegaPlus comes with 64K RAM and optional expansions to 256K in 64K increments (ultimate capacity 512K with MegaPak). RS 232 serial port for your SmartModem or other accessories, an automatic clock/calendar, plus SuperDrive and SuperSpool software. You'll have automatic entry of time and date. Plus you can use on-board memory as you would a disk, but with the speed of RAM memory. Using SuperSpool, your IBM-PC will be freed forever from the speed limitations of your printer. The AST MegaPlus board can also be equipped with an optional parallel printer port, a second serial port, or both. And it's compatible with the IBM-XT.

Get smart.

The Hayes SmartModem has become the modem-of-choice for just about everyone who is serious about connecting their IBM-PC to mainframes, timesharing systems, and other micro's or mini's. This intelligent, stand-alone data communications system connects directly to your IBM-PC, and works with either touch or dial phones. For professional applications, you can add our optional 5-Line Super Selector. This will let you connect your IBM-PC and SmartModem to multiple-line phone systems.

Trouble-free interface: PC Connection.

We guarantee that you'll be able to communicate with us as easily as with your IBM-PC. Your AST MegaPlus package includes a 30-day guarantee and a 1-year parts and labor warranty. Extended warranties are also available.

Talk to the world.

Start by talking to us. We'll have you connected to CompuServe almost as fast as you can say UPS.

The AST MegaPlus Package

CIRCLE 339 ON READER SERVICE CARD

In a bold move to counter Japan's imminent plunge into the international market for personal computers, IBM has begun a sophisticated campaign to promote its "5550."

Over There: IBM In Japan

He is everywhere, gazing out from subway walls and billboards, murmuring sultrily on Japanese TV. He is Kioshi Atsumi, the most popular movie star in Japan today, the personification of IBM's new image, customized for the Japanese market.

Long the bastion of conservatism in the United States, IBM has adopted a decidedly different image in Japan. With the announcement of its new 5550 "multi-work station," IBM is targeting the Japanese market for word processing, personal computers, and intelligent terminals—terminals that can communicate with other IBM host computers. The company has enlisted Atsumi to kick off what it hopes will be a buying craze for the 5550 in the Far East.

In a Blue Fedora

Atsumi is best known from the O Toku Tsurai Yo films. (Loosely translated, this means "A Man Is Miserable.") The Japanese commercials featuring the star are

punctuated with English voiceovers along the lines of "IBM—Go, Go, Go, Mon!" In the ads, Atsumi appears, replete with blue fedora, velvet cravat, and pinky ring—resembling nothing less than a gigolo. This image is a far cry, however, from what he actually represents to the Japanese people.

To the Japanese, Atsumi is a cross between a non-intellectual Woody Allen—who always loses the girl—and a less than slick Dustin Hoffman. He is a "man with a heart," according to Japanese waiters, busboys, and shopgirls. He is one of them, a man of the people. And if Atsumi can be elevated to elegance via the IBM "class machine," perhaps they can too.

A Media Blitz

IBM's sizable commitment in Japan is underscored by its choice of Atsumi as the focus of a 5550 media blitz that is soon to reach full force. The company took another big risk 2 years ago, when it shifted

focus end marketing direction in the United States with the introduction of the PC.

IBM is still feeling the impact of the FBI-Hitachi "sting" operation (or "accident," as the Japanese businessmen delicately refer to it) earlier this year. Having lost market shares in small business systems and personal computers to the powerful Japanese conglomerates Fujitsu and Hitachi, IBM occupies an uncertain position in Japan right now.

The sting resulted in a serious loss of face for Hitachi, which had commissioned

several of its employees to secure classified information about IBM products still on the drawing board. In Japan, however, the consensus is that the Japanese sense of pragmatism far outdistances the memory of such matters. "A rumor lasts only 75 days in Japan," was K. Nishi's reply when asked to comment on the spying operation. Nishi is CEO of ASCII Microsoft, the Far East representative of America's Microsoft, headquartered in Bellevue, Washington.

Recent indicators point to IBM's readi-

ness to play hardball for high stakes with the Japanese—on their own turf. This willingness is apparent, not only from the upcoming marketing blitz for the 5550, but also from IBM's recent introduction of its English language PC, a joint venture flirtation with Matsushita Industrial Electric Company, and IBM's hard-line stance with Hitachi.

THE HIGH-SPEED printer can print up to 60 Kanji characters per second.

Competitive Pricing

As the focus of IBM's new campaign, the 5550 looks like a decided winner. It has plenty of power et cetera competitive price. A low-end version, which retails in Japan for about \$4,100 in U.S. dollars, includes a printer, a single disk drive, and 256K of expandable memory. The high-end model, which sells for \$14,000, comes with three disk drives, a built-in 8.1-megabyte hard disk, a high-resolution color monitor, 512K of memory, and a top-of-the-line high-speed printer. (The color monitor and hard disk features will not be available until December 1983.)

The 5550's competitive pricing is due to several factors, according to ASCII Microsoft CEO Nishi. First, IBM plans to sell the product in quantity to large Japanese-based international trading companies that have volume turnovers. Second, in a move that emulates the Japanese, IBM will settle initially for smaller profit margins. Third, like IBM's PC, the product is a hybrid, made up of parts manufactured by several different Japanese producers. These manufacturers are able to take advantage of highly automated facilities, resulting in low-cost production.

This is the first time IBM has relied exclusively on a phalanx of Japanese manufacturers, and industry-watchers predict similar joint ventures in the future. For the 5550 hybrid, Matsushita manufactures the system unit and monitor; Aits makes the Japanese Industrial Standard (JIS) Hiragana keyboard; and Oki produces the printers. Developed in a 2-year design project

Inside The IBM 5550 "Multiwork Station"

IBM's effort to battle the Japanese for markets on their own ground depends on the flexibility of their star contender. The 5550, the focus of IBM's current sales crusade in Japan, uses a 16-bit Intel 8086 microprocessor. The machine features 256K RAM, which can be expanded to a maximum of 512K. The system uses a double-sided, double density, 5 1/4-inch disk, with a capacity of 640K. Options for the 5550 include a 128K memory adapter, an adapter for magnetic stripe reader, and two communications adapters—Systems Data Link Control/Bisynchronous (SDLC/BSC) and /ASNYC) and Control Asynchronous. A self-diagnostic mechanism locat-

es functional hardware problems automatically.

Three display options are available for the 5550: two monochrome displays, 12-inch and 15-inch, and a 14-inch color screen. Up to 2,048 alphanumeric characters can be displayed, as well as 1,024 Japanese Kanji characters. The three available matrix printers include a model that prints 16 x 16 dots per character, another that prints 24 x 24 dots per character, and a high-speed model. The high-speed printer displays 24 x 24 dots per character, has options for single-sheet and continuous forms feed mechanisms, and can print up to 60 Kanji c.p.s.—K.B.

Working configuration of IBM 5550 "Multiwork Station."

by IBM Japan's Fujisawa Product Development Laboratory, the 5550 is being assembled at an IBM plant near Tokyo.

English Language PCs

In January, IBM introduced the English language version of its PC in Japan. However, according to Richard Morris, IBM Director of Communications in Japan, IBM is adopting a "wait and see" attitude with regard to its sales potential there. While the 5550 will be marketed through 40 Japanese "Dairitan" or dealers, including Nippon Office Systems, Kanamaso Gosha, and ComputerLand Stores, the PC will be retailed solely through ComputerLand Japan.

Since the beginning of this year, ComputerLand has opened five branches in Japan, including a high-profile store in Tokyo's Shinju-Ku district (two-and-a-half million Japanese commuters pass this store daily on their way to work.) John Saka, Director of Japan's ComputerLand operations, reports selling out his first shipment of English-language PCs in 2 months. He has had to reorder, due to insatiable Japanese demand for the machines, which is somewhat surprising to

nicate with their widely dispersed mainframe computers.

Pacific Overtures

According to IBM's Morris, the 5550, which is compatible with the IBM PC, is the key to IBM's office automation strategy in Japan. He says that IBM plans to market the 5550 in Japan in conjunction with the "Scan Master" image processor, another Japanese-made product. Indications are that other Pacific Rim countries are targeted for marketing of the 5550 as well. In the year ahead, Morris reports, IBM will introduce versions of the 5550 that have Korean, Chinese, and English word processing capabilities.

The IBM PC and the 5550 are both targeted toward the largely untapped Japanese professional and business markets, according to ComputerLand's Saka. As always IBM is stressing support and service as prime motivators to attract customers. IBM has established 27 service and maintenance centers throughout Japan and is offering a 1-year warranty on the 5550, to appeal to the high value that the Japanese business community places on reliability. (In Japan, the 6-month warranty is standard.)

IBM must compete with Japan's "Akihabara mentality" if it is to compete successfully against technology-driven Japanese microcomputer companies, says Saka. Akihabara is Tokyo's renowned dis-

count shopping district that features Midla-Eastern bargaining and hawking, juxtaposed with every high-tech state-of-the-art consumer product currently known to man. In accordance with this tradition, Japan's microcomputer firms are accustomed to "paper-thin profit margins" and cutthroat discounting in their attempts to establish market share early in a product's life cycle.

Mushrooms After the Rain

The Japanese say that IBM plug-compatible manufacturers are springing up as rapidly as "mushrooms after the rain." Each "mushroom" has established a highly specialized niche: NEC has targeted business-oriented personal computers; Hitachi and Toshiba are zeroing in on word processing; Fujitsu has garnered overall market share in mass-market personal computers.

The personal computer wave, however, has not yet crested in Japan. And, though there are over 20 manufacturers of personal computers, IBM's Morris claims that the Japanese lag behind the United States by about 2 years in how they use personal computers. He claims that non-business users consist almost exclusively of diehard hobbyists and an upcoming generation of Japanese "microkids."

Previous word processors were locked in mortal combat with the Japanese language. Their keyboards, according to Morris, were as large and unwieldy as dining room tables. They all had relatively inefficient methods of translating Japanese Hiragana characters (a Chinese-derived phonetic alphabet used for native Japanese words) into Kanji, the set of over 5,000 standard Japanese characters. (There is yet another Chinese-derived alphabet to contend with—Katakana, which spells out words borrowed from other languages, usually English.)

The 5550 surpasses its predecessors by selecting the most sophisticated Kanji, according to its context. Earlier Japanese word processors selected a list of five to twenty possibilities in Kanji, leaving the user to choose the correct phrase.

In its word processing mode, the 5550 is programmed to access a dictionary of over 40,000 Japanese words. Using its basic software system, it can recognize up to 3,418 characters. By using another piece of software on an extension disk, it can recognize up to 7,190 characters. The

THE JAPANESE lag behind the United States by about 2 years in how they use personal computers.

IBM. This demand is surprising, not only because these computers are English-speaking, but because they are priced substantially higher—7-to-8 percent—in Japan than in the United States. This price variance is due to various import tariffs and a different overseas pricing strategy, according to Saka.

Fifty percent of PC sales have been to English-language-speaking Japanese businessmen and to Japanese universities that are evaluating the machine and using the computer to teach students to be programmers. The remaining 50 percent have been sold to Japanese-based U.S. banks and financial managers, who use it to commu-

ages include application programs for general ledger, accounts payable, and accounts receivable, as well as ASCII Microsoft's "Multi-Tool" package. The 5550 can also use BASIC, or high-level programming languages such as COBOL, FORTRAN, and Pascal, as well as the Macro Assembler.

Plastic Cherry Blossoms

A sea of solemn, blue-suited Japanese watched the 5550 go through its paces at a 2-day IBM demonstration in Tokyo last April. Hanging like a totem in the huge reception hall was a giant poster of Kioshi Atsumi in his blue fedora. Plastic cherry blossoms were strung through the hall—a reminder of the live flowers that had not yet bloomed.

Across the room, monitors flickered rainbow colors, as bar charts were rapidly transformed into pie-shaped graphs. Young Japanese women dressed in turquoise uniforms speedily chirped their 5550 sales pitch in Japanese, their words punctuated with recognizable Anglicisms such as "print out." Delicately etched Kana script spewed from the printers, looking as fragile as a bird's footprints (see Figure 1). It appeared that the IBM 5550 would soon sweep Japan.

And Atsumi, watching silently from the poster on the wall, looked as if he might suddenly say, "IBM—Go, Go, Go, MAN."

Share and share alike.

With SCS PCnet™, a true, low-cost network for IBM Personal Computers.

Share and grow with PCnet from Santa Clara Systems... the true local area network for the IBM Personal Computer (PC) and its MS-DOS operating System. PCnet allows the sharing of hard disks, floppy disks, letter-quality printers, modems, and internal memory by all networked PCs. So you can add new dimensions of capability to your system while reducing your per station costs!

True network news

With its proprietary, on-board intelligence, PCnet permits direct communi-

cation between all PCs in your network. If one goes down, the others don't. Unlike other network products, a dedicated disk server is not necessary, saving you money. In fact, no extra hardware is required to add more stations; just one PCnet board for each and you're set. Plus, PCnet is transparent to all IBM and compatible software.

Service for thousands

You have plenty of room to grow. And, as you add more users, your peripheral resource power and memory capacity increase linearly. For all that it offers, PCnet is surprisingly easy to install. Just plug a PCnet board into an I/O slot of each IBM PC you want to include in your network. Then tap into the standard coaxial cable—offered in lengths of more than one mile with PCnet!

The extras you'll like

You'll appreciate the specialized network utilities available with PCnet. Like print spooling, multi-tasking, and file-locking. Plus the ability to communicate with IBM PC look-alikes. In addition, the Pascal Bubble™ is supported under MS DOS.

Full customer support

Only Santa Clara Systems offers you worldwide support with PCnet. A full 90-day warranty. And a complete line of hard-disk storage products tailor made for use with the PCnet, featuring up to a ½ gigabyte of storage per PC and removable Winchester cartridges for backup.

See the difference sharing can make in your business. Our starter kit has everything you need to network two PCs right away—two PCnet boards, cable, and documentation. For more information, call or write us today!

Shift into Ultradrive.

Targa is supplied with both MS-DOS and CPM-86 compatibility.

IBM-PC is a registered trademark of International Business Machines Corporation, MS-DOS is a registered trademark of Microsoft, and CPM-86 is a registered trademark of Digital Research, Inc.

Targa®: The ultimate mass storage machine for your IBM®-PC.

With up to 30 megabytes of hard disk capacity, you can handle data bases that would fill phone-books. And access, process, and update that data in seconds.

Which, after all, is what serious personal computing is all about.

The Purr of Performance.

Targa is one beautiful piece of engineering.

Fast. Data glides in and out at 5 million bits per second.

Quiet. Even with disks spinning at 3600 rpm inside.

And solid. Which is why Targa carries a warranty few others would dare to offer. 24 full months.

Automatic Is Standard.

Just plug the Targa into your PC, and you're ready to go.

Targa comes with plain English instructions and plenty of software. Easy to use, clearly documented programs help you transfer data in and out, use powerful system utilities, and diagnose problems.

The Luxury Model At Economy Prices.

The best way to order a Targa is right from

the CMC factory in Seattle, one of the world's oldest microcomputer hard disk manufacturers. You pay considerably less than you would for a lesser system sold at a computer store.

Powerful standalone Targa mass storage systems start at \$1550.

Targa 50	5 megabyte models from \$1550
Targa 100	10 megabyte models from \$1890
Targa 150	15 megabyte models from \$2190

Prices include shipping and handling. Call for prices on expanded capacity models.

Take A Test Drive.

No risk.

We'll ship your Targa factory direct. Then give you 30 days to make sure you're satisfied. If not, we'll refund your full purchase price. Plus your return postage costs.

To reach our professional sales staff, call toll free, 800-426-2963. (In Washington, dial 206-885-1600.)

You can charge the Targa to any major credit card. Or you can send a check, money order, or wire transfer. Your Targa will arrive within days.

Despite its additional features, this updated operating system leaves its users more bugged, bothered, and bewildered than ever before.

The Dark Side Of PC-DOS 2.0

When IBM announced the 2.0 version of PC-DOS, most of us in the community of PC users were excited and thrilled by the new features that it contained. But now that we have had a chance to work with the new version, we're discovering that there are lots of problems with PC-DOS 2.0. DOS 2.0 is young. Though I attempt to detail the trouble spots, the problems in PC-DOS 2.0 seem to be so plentiful that you can be sure of discovering more for some time to come.

A little background information might be in order, to put these problems into context. Creating a new release of PC-DOS posed some unique problems. Usually each change in a widely-used program like PC-DOS is evolutionary. An update builds on what has been done before: the program is improved and expanded, but not rebuilt. But the authors at Microsoft wanted to restructure PC-DOS so that it

would take on much of the character of the popular UNIX operating system. Microsoft had good reasons for doing this—it wanted MS-DOS to fit into its plans for a

**I CAN SEE
signs that IBM brought
out version 2.0 in haste
rather than slowly and
carefully.**

family of UNIX-related operating systems. Microsoft's plans won't just benefit itself; in the long run this change will benefit users as well, because it will help our PCs fit into the future of computing in a

smoother way.

Thus, for the 2.0 release, PC-DOS had to be rewritten from top to bottom; the internal structure and philosophy of the operating system underwent a complete overhaul. The attempt to revolutionize DOS made it much more likely that errors would be introduced into the new version. Usually each new release of a program has fewer and fewer problems than past releases, partly because there is more time to carefully check for errors. But it didn't happen that way with this new PC-DOS. We know that creating PC-DOS 2.0 wasn't an evolutionary process, and I can see signs that IBM brought out version 2.0 in haste rather than slowly and carefully. Perhaps this is because IBM was in a hurry to introduce the new XT model of the PC, which required PC-DOS 2.0.

There are so many different kinds of problems with PC-DOS 2.0 that it is hard

Sabotage!

The author of The Norton Utilities tells of his near disaster in a compatibility gap lying between versions of PC-DOS.

When a new release is made of a popular operating system like PC-DOS, compatibility is all-important. It's essential that a new version of PC-DOS support all the features of older versions, so that existing programs will work with each new edition. This is the way it's supposed to be, and the folks who worked on PC-DOS went to great lengths to make 2.0 behave accordingly. Wherever they wanted to depart from the convention established by the earlier versions of DOS, they innovated by adding to convention, building rather than discarding. This preservation of the old ways accommodates programs that followed the rules for earlier versions of PC-DOS; they were assured of working with the new one. But there's one sticky exception, which amounts to an act of sabotage.

There are two PC-DOS services that programs can call on to read or write complete sectors from disks; these are known as "interrupts 25 and 26." Programmers who used these interrupts in the past noticed that there was a flaw in the way they were defined: they didn't lay out the best possible way to access a disk. They gave a workable way, but not the best way. For PC-DOS 2.0, these two interrupts were

redefined and improved—except for the fact that any program that used the old scheme wouldn't work with the new, and vice-versa. This sabotages any program that uses either of these two services.

I am one of the near-victims of this change, so I have the luxury of being amused as well as appalled by what was done with PC-DOS 2.0. My own programs need the services provided by interrupts 25 and 26, but I had decided to use another means to get the same result: my programs happened to use similar services that were offered by the BIOS, built into the PC ROM. As a result, The Norton Utilities can still run under PC-DOS 2.0. The only restriction is that my programs won't work with disks in 9-sector format, the default now used by PC-DOS 2.0. (A new version of The Norton Utilities is now available that takes advantage of the additional functions in 2.0; this update can also be used with PC-DOS 1.1.)

I was lucky. I was spared the agony of being sabotaged by PC-DOS 2.0. Though the disk-based PC-DOS version of these services was the one recommended by IBM, I luckily chose the other method, so I got off easy. But what about those programmers who trusted IBM and Microsoft,

and did things the official and approved way? They sure got a raw deal, as did anyone who uses the programs they wrote.

This brings up the touchy issues of compatibility and the integrity of IBM and Microsoft. Most of us have heard of programs that worked on the 1.0 version of PC-DOS, but didn't work with 1.10. In most cases, this happened because the programmers didn't play by the rules, the rules that are supposed to guarantee that a program will work with every version of PC-DOS. But when programmers are given rules to follow and IBM changes the rules in the middle of the game, we are all in trouble. The most unfortunate result is that now we don't know how much we can trust IBM and Microsoft to keep new and old versions of PC-DOS compatible.

I don't want to unduly criticize IBM and Microsoft. Given the massive reorganization of PC-DOS that was done for the 2.0 release, they did a very good job of keeping it compatible with older versions—except for their failures with these two services. Unfortunately, 96 percent compatibility isn't what we need—it takes 100 percent to make our programs work. And being 96 percent trustworthy isn't terrific either. —P.N.

to categorize them in a simple way. Some of them are out-and-out bugs. Some of them are just lousy human engineering, making PC-DOS less, rather than more, user-friendly. Some are errors in the documentation, and others are annoying inconsistencies—a feature will work in one part of PC-DOS, but won't in another, for no really good reason.

The Misleading Manual

The easiest and simplest place to begin is with the documentation for PC-DOS. There are typos, grammatical errors, and misleading information galore in the PC-DOS 2.0 manual—so much so, that IBM has already published a set of corrections to the manual. There is a very easy way to check if you have the corrections in your copy: turn to page xx of the table of con-

tents. If you think you're seeing double when you look at the listing for Appendix

T
HE FIND
and Sort filters,
however, are both
unpredictable.

K (about 10 lines are repeated), you do not have the corrected pages. Here is a guide to some of the other problems with the documentation.

If you run across a new term, ASCII, and can't find it in the index, look for its

definition on page D-14. If you wonder at a claim that the FDISK command will do something that it won't, try FORMAT instead. Anything that looks like a factual error, probably is. If you have trouble making sense of Chapter 13, which discusses extended screen and keyboard control, you probably made the mistake of thinking that this chapter was intended to be an explanation. Actually it's a new feature of the PC-DOS manual, a sort of "can-you-figure-this-out?" puzzle. (There may be a prize offered to those who succeed.) The write-up for the new PC-DOS memory management services has also puzzled more than one experienced programmer.

Even though the PC-DOS manual has grown enormously in size, it neglects to mention many important changes and innovations in DOS. Relying on the man-

uel for guidance, you may feel to notice new features of subdirectories and paths. Here is one example that surprises almost everyone who stumbles onto it. If you are working on one disk, and set the "current directory" to one of your subdirectories, this is where PC-DOS looks for data files. Now if you change the default drive to another disk, naturally that disk's root directory becomes the current directory. So far so good; even the manual agrees. But then, if you switch the default drive back to the original disk, PC-DOS remembers the original current directory and points to it again. In fact, PC-DOS 2.0 seems able to keep track of a current directory for each disk drive. The documentation only mentions this fact, very quietly, in one place (pages 5-6) and never brings it up again, not even when discussing how to change the current directory.

The documentation for PC-DOS 2.0, like that of its predecessor, fails to mention a nice extension to the REM batch command. It's true that beginning a comment line in a batch file with a period works just as well as beginning the line with REM. This abbreviation of the REM command is convenient, since it can be used to produce tidier and more attractive batch file comments without all those REMs cluttering up the screen.

Questionable Commands

As to more substantial problems, I've found, and heard about, plenty of them. The new PC-DOS "pipelining" feature includes a category of routines known as a "filter." PC-DOS 2.0 provides three filters, called More, Find, and Sort. Of the three, one works just fine: More. The Find and Sort filters, however, are both unpredictable. At times Find will report finding characters that aren't really there; its output can become so scrambled that it is hard to make sense of it when it appears on your display screen. The Sort filter has been known to report that it is out of disk space when it has millions of bytes of disk space available to sort a few hundred bytes of data.

Another distressing bug in PC-DOS concerns redirecting of input to commands. PC Magazine columnist Mark Zachmann discovered this problem. If you want a PC-DOS command that asks you for a reply to questions (such as the Format command, which includes prompts like "Format another?") to work automati-

cally rather than interactively, you can set up a response file, and use "input redirection" to tell the command to get its responses from the file. This is fine if all goes well. But if the command needs more responses than you put in the response

I'VE GOTTEN odd results with the Copy command when using it to copy several ASCII files into one.

file, things get hung up, and you can't use the Ctrl Break keys to solve the problem.

Zachmann also discovered that an old bug from previous versions of PC-DOS still hasn't been fixed. Under the wrong circumstances, Debug can get hung up tracing a program, due to poor handling of the timer interrupt.

Besides the problem in using redirection for the input to PC-DOS commands, redirecting the output from PC-DOS commands also can lead to trouble. When the output from a PC-DOS command is put into a file, the file doesn't have the sort of tidy ending that a text file is supposed to have. This complicates the use of PC-DOS's redirection features.

I've also gotten odd results with the Copy command when using it to copy several ASCII files into one. So odd, in fact, that I haven't yet been able to nail down a real bug in PC-DOS—perhaps I've been doing something wrong. In any case, the results haven't always been what I'd expected. If you need to use the Copy command in this way, proceed with care and be prepared for surprises.

The check-disk command, CHKDSK, has some new features, including a report of when files are fragmented into several noncontiguous parts. (This condition can slow down access to your data.) But you should consider the report an approximation; it isn't always accurate. I've sometimes found that files aren't in the same number of pieces that CHKDSK says they are. And CHKDSK won't tell you if a subdirectory is itself contiguous, a strange omission since subdirectories are files like any other, and may or may not be stored in

a contiguous space.

In addition to the bugs found in PC-DOS 2.0 there is a serious bit of sabotage. Two of the PC-DOS services were changed in a way that will make some old programs incompatible with the new PC-DOS release. The implications of an incompatibility being built into the new version of an operating system are far reaching. How many programs, now or in the future, might be sabotaged by changes to the way that PC-DOS works?

With the wonderful new use of "paths" in PC-DOS 2.0 you may be a little surprised to discover that the Print command does not handle paths; it will only accept files out of the current directory. Print also suffers from some terrible performance problems. When you use a print spooling program, your computer is doing multi-tasking; it is working on more than one operation, more than one task, at a time. When multi-tasking is going on in a system, there's a question of the priority of the tasks—which one will get first call on the computer's resources? The usual policy for a print spooler is that it should be given a high priority so that the printer can keep going at its maximum speed. Even though the computer's other operations (such as processing commands that are typed in at the keyboard) may be more important, a print spooler program normally uses so little of the computer's thinking power that spoolers are customarily given the highest priority. After the spooler does its small amount of work, the rest of the computing power is returned to

THE PRINT
command runs with a very low priority; if your computer is doing anything else, Print barely gets any printing done.

other uses. At least that's how a spooler should work normally.

But, in PC-DOS 2.0, the Print command runs with a very low priority; if your computer is doing anything else, Print barely

gets any printing done. In some cases, Print hardly works even when the computer is doing nothing else. As if this weren't bad enough, Print also eats up about 11 percent of your PC's horsepower. For an 11 percent "tax" on our computing power, we ought to expect to get a lot of printing work done—but that isn't the case with the 2.0 Print command.

Illogical Limits

Besides the problem of Print command not accepting paths as files, there are other annoying and petty restrictions for PC-DOS commands. Commands should accept path names and generic file names (which use * or ?) whenever they make sense, but in several cases the names were rejected. Also, when a PC-DOS command takes several parameters, you should be able to use commas, spaces, or some other characters freely to separate the values for the parameters. But at least one PC-DOS command, EXE2BIN, won't accept the same parameter format that it used under PC-DOS 1.10. If a PC-DOS command gives you any complaints about using improper parameters or the wrong number of parameters, try another delimiter, or replace commas with spaces or vice-versa.

The Echo Off command is a useful new feature that makes it possible to keep batch files from displaying extraneous information about the commands being carried out. This can be a very helpful tool in setting up friendly batch files. Unfortunately, there are some bugs in the way Echo works. When a batch file ends, Echo gets turned back on, whether you want it or not. And if the last command in the batch file doesn't end with a carriage-return, Echo gets turned on before the last command is performed, a very curious quirk. I've also had reports of even more exotic problems with the Echo feature. The whole point of the Echo feature is to make the operation of the computer slicker and less technical, for the convenience of the person using it. Unfortunately, the bugs in Echo defeat much of its purpose.

The volume ID is another little sore point in PC-DOS 2.0. You can now give a volume label to your disks and fixed disks to help keep track of what's what. A nice idea, but it was carried out very poorly. First, you can place a label on a disk only when you format it—PC-DOS doesn't let you change labels or add labels to a disk that is already formatted. And PC-DOS

won't let you put labels onto disks in eight-sector format, only in the new nine-sector format. I solved the label problem by writing a label program that can add, change, or delete volume labels in any format of disk. (I added the label command to my utilities set.) Unless you have a program like this, PC-DOS gives you very poor control over disk labels.

To make things worse, PC-DOS reports labels in a poor way. Whenever PC-DOS is reporting on a disk while executing commands like Dir, CHKDSK, or Tree, it tells you the volume label of the disk. This is a good idea—in fact, this is what labels are intended for. But if the disk doesn't have a label, PC-DOS doesn't keep quiet—it complains to you, again and again. Sometimes it complains by saying that the disk has no label, other times it says that the disk has a label of ??????????—that's right, a string of 11 question marks! This isn't what I would call slick behavior.

The Forgotten Human Element

In fact, the fiasco of the PC-DOS approach to handling labels points to the

biggest problem with DOS 2.0. It isn't one of the bugs in PC-DOS—these are likely to get fixed at some time or other. The problem is inadequate human engineering. The authors' work demonstrates a cavalier atti-

***T**HE BIGGEST problem with DOS 2.0 is inadequate human engineering.*

tude toward the concept of user-friendliness. Computers are spreading rapidly in our society, and of course the PC is playing a large part in this. As more and more people start to use computers, it becomes more important that computers be easy to use, easy to understand. But the PC-DOS revision doesn't represent a step forward in making computers humane; it is a step backward. Compared to previous versions, PC-DOS 2.0 is much more techni-

cal, more complicated, harder to use, and generally not as kind to its users.

As another example of how 2.0 isn't all we should reasonably expect, consider the Tree command. Tree reports on the structure of directories and subdirectories on a disk. But when Tree formats its output, so many extraneous blank lines are sent to the display that the information provided by Tree rolls off the screen much too quickly. Now I don't want to give anyone the impression that this is an earthshaking matter, but it illustrates the currents that run through almost everything in PC-DOS 2.0: poor human engineering, poor attention to detail, poor regard for the smaller aspects of quality.

What is going to happen with PC-DOS? IBM is always closed-mouth about what it might be working on for the future, so I can only guess. There are two messy problems that IBM faces with PC-DOS 2.0. One is the errors in the new version; the other is IBM's need to continue selling two versions of PC-DOS, since 2.0 can't be used effectively on machines with only 64K.

There are so many problems with 2.0

INTRODUCING

PINBALL FOR THE IBM PC

- In the beginning came the onrush of new computer pinball simulations. Then came SubLOGIC's "Night Mission" Pinball by Bruce Artwick.
- And the rush was over.
- Pinball was so beautifully crafted, so physically correct, so "complete" and yet so variable, that it stood out well above the competition.
- This pure example of programming perfection is now available for the IBM PC. More than just a masterful display piece for your Personal Computer, Pinball also remains the ultimate in fun.

On IBM PC 64K disk. Requires the IBM Color/Graphics Monitor Adapter. Supports RGB, B&W, and color monitors.

**"ADD UP TO 512K RAM, ASYNC AND
SYNC COMMUNICATIONS, A CLOCK
AND PRINTER SUPPORT-UP TO FOUR
I/O PORTS IN JUST ONE SLOT?"**

"YOU CAN WITH PERSYST."

The Persyst Time Spectrum. It's the most powerful and expandable multi-function PC board you can buy.

A Persyst Time Spectrum™ multi-function board can make any personal computer work better.

Whether you own an IBM PC or XT. Or the IBM compatible Compaq or Columbia.

There's even a Time Spectrum board for the Texas Instruments PC.

With Time Spectrum, you can combine up to six powerful functions—plus two advanced software programs—on just one board. And get performance and features like nothing else.

For the IBM PC, Compaq and Columbia, maximum capability in minimum space.

For example, Time Spectrum is the only multi-function board that lets you expand your IBM PC from 64K up to 512K RAM. Add a calendar clock. Add as many as two RS-232 asynchronous communications ports, or two synchronous and one asynchronous communications port. Plus print spooling and as much as 320K of RAM disk memory.

Up to four I/O ports—in just one slot.

How did we do it?

With the Cliffhanger™. A unique, RFI-shielded connector system that solves the problem of tying two or more I/O ports to peripheral equipment like a printer or modem, without consuming two or more slots. And only Persyst has it.

The Time Spectrum Cliffhanger™
So ingenious, it's patented

What's more, expansion functions can be plugged right onto the Time Spectrum board. Or added with Versapak™ piggyback modules. So you can add exactly the capability you need, when you need it.

Extra flexible expansion for the IBM XT.

For the IBM XT, Time Spectrum not only delivers exceptional one-board expansion capability, but extra flexibility, too.

First, we designed Time Spectrum so you can add the RAM you want without having to fill the memory rows on the XT mother board.

Expandability from 64K up to 512K RAM enables your PC to handle the most complex tasks.

RAM and communications expansion modules are easily snapped onto the Time Spectrum.

Optional features are socketed on the board for maximum flexibility in expansion.

Double-face wipe sockets with beryllium copper contacts hold component leads firmly in place.

Serial and parallel I/O ports permit interface with virtually any printer.

Calendar clock. It comes with a five year rechargeable battery.

Connect a modem through a serial communications port and you can link your PC to the world of telecommunications.

And with Time Spectrum plug-in expandability, you can continue to add functions as you add requirements.

Start with basic memory and a calendar clock. Then add another asynchronous communications port. Parallel printer port. Additional memory. Or any combination of functions.

With Persyst, the choice is yours.

And now, one-slot capability for your Texas Instruments PC.

Now there's even a Time Spectrum multi-function board for your TI PC. With it, you can add up to 512K RAM, two serial ports, calendar clock and light pen port—capability to handle even the most complex and difficult computing functions.

And still only consume one slot.

The Persyst Time Spectrum board.

Maximum expandability now. And quality and versatility so you can keep on expanding later.

See your IBM or TI PC dealer and insist on Persyst.

that I don't think that IBM can sweep them under the rug. I expect that, before long, we'll see an error-fixing release of PC-DOS; perhaps it will be numbered 2.05, like the unofficial and short-lived 1.05 version. The problem of dealing with a pro-

THERE ARE SO many problems with 2.0 that I don't think that IBM can sweep them under the rug.

liferation of versions of DOS—1.10, 2.0, and (I speculate) 2.05—is one that we and IBM will probably just have to bear.

Sins of Omission

It is worth noting one other problem with PC-DOS—the missing parts. The disk operating system used on the IBM PC is a version of the Microsoft MS-DOS operating system. Unfortunately, IBM hasn't chosen to give us everything that Microsoft makes available. There are parts to MS-DOS that IBM takes out before it passes it on to us. So, even if you are happy with PC-DOS 2.0, you should think about features that IBM could have given us but didn't.

Among them is a Comp command that will try to find matching points in text files, rather than just report ten nonmatching bytes and give up, as the IBM version does. Another feature, worth a lot to serious program developers, is a library maintenance program that works with program object libraries. Other interesting things we didn't get are a Cipher command to encrypt and protect our data, a Profiler to examine and report where a program is spending its time (very useful for making programs efficient), and a Login command to control access to the computer.

You get the picture—there is a lot we could have had, but didn't get. What we did get was a recycled operating system that is full of problems. /PC

Peter Norton has written *Inside the IBM/PC*, published by The Robert J Brody Co., and a set of programs to supplement PC-DOS, called *The Norton Utilities*.

WE COULD SHOW THE OLD WOMAN WHAT TO DO WITH THE SHOE.

INVESTOR III™ makes rhyme and reason out of real estate investing.

The Old Woman Who Lived In A Shoe made a great nursery rhyme. But would the shoe make a good real estate investment? Now, with the help of Good Software's INVESTOR III™ you can know. In fact, you can perform real estate analysis with INVESTOR III™ about as easy as a child learns Mother Goose.

Because INVESTOR III™ was developed by a real estate investment company and written by its in-house computer experts, it is both practical and comprehensive. Yet, it's so easy to use that from the moment you load INVESTOR III™ into your Radio Shack TRS-80 or your IBM Personal Computer, you get a step by step process which can analyze everything from a small rent house to a multi-million dollar office project.

To find out more (see if the shoe fits, so to speak) call or write today! What you'll get with INVESTOR III™ is a whole new world of real estate investing at your fingertips. And that's no fairy tale.

SOFTKITS

Softkits contain complete, ready-to-run programs. The programs are modular, menu-driven and written in BASIC. They come fully-documented with listings, theory, equations and operating instructions. Use them as-is or modify and combine for custom applications. Softkit disks are copyable.

Data Plotting Software for the IBMpc

This softkit contains a system of 18 complete programs which process and display data: pie charts, bar charts, stock market charts, histograms, 3D views of surfaces, log plots, curve fitting, data management, histograms and statistical analysis.

Programs are modular, menu driven, written in BASIC, fully explained and keyed to theory. They are listed in the book alongside theory and equations. Use as-is or modify to best suit your own applications.

Four data base management programs are included. These create x, y, x-y, x-y-z and stock market data files and store them on disk. Plotting programs read the data files and carry out sorting, statistical analyses and plot results.

Features include automatic scaling, axis marking and numbering, auto replot when data changes, and a special program called LABELER which places text and symbols over graphics using a moving cursor.

□ Book with Disk: \$46

Engineering Software for the IBMpc

This softkit contains 25 fully-documented programs for computer-aided design and analysis on the IBMpc. They will show you how to write modern CAD software and use your PC for professional engineering work.

Emphasis is on combining computer graphics with engineering problem solving. Programs are included to interactively create engineering drawings, store them on disk, recall, update, merge, add physical properties such as resistance, thermal capacity and density, and rotate in 3 dimensions to produce isometric views.

After being stored on disk, the drawings may be recalled by applications programs which perform mechanisms simulation, heat transfer, matrix operations and optimization using Monte Carlo techniques. Programs are also included for Fourier Series and Transforms. These graphically display spectra alongside waveforms.

All programs are menu driven, written in BASIC and fully documented and keyed to theory and equations.

□ Book with Disk: \$48

IBMpc Graphics

This softkit is a self-teaching guide that will show you how to write your own 2 and 3 dimensional graphics software on the IBMpc, quickly and easily.

Learn how to create 2D and 3D shapes, translate, rotate, scale, stretch, clip, remove hidden lines, shade, create perspective views, calculate and plot surface intersections, produce animations effects, store graphics on disk.

Applications to science, education and business included. Also covers hardware needed for PC graphics, use of the PC's special graphics enhancements, and how to separate text from graphic on the PC's screen.

Contains 81 programs arranged in a tutorial manner leading from one step to the next. Math level is kept to a minimum and new concepts are explained as they are used.

Much of this softkit is based on the popular *Graphic Software for Microcomputers* by B.J. Kortles which was named "The Best Book on Microcomputer Graphics" by Creative Computing magazine.

□ Book with Disk: \$45

Structural Analysis Software for the IBMpc

These 11 programs will give you the ability to carry out sophisticated structural analyses on your IBMpc. They are modular, fully documented and ready to run.

You will be able to create a finite element mesh on the screen of your micro, rotate it in 3 dimensions, and store it on disk. Then recall the mesh from disk, recall a file of material properties and carry out a 3d truss or frame analysis. Shape of a deflected truss may be plotted over the original shape.

Programs also included for analysis of trusses with large deflections and non-linear material properties. These use an incremental solution strategy. Other programs calculate combined stresses and properties of beam cross sections.

Analyses use the modern "direct stiffness" method.

This system of programs is patterned after large-computer structural analysis systems such as ADINA and NASTRAN, but reduced in scale for micros. They were written by B. J. Kortles, PhD, former CAD/CAM consultant to the Arthur D. Little Company.

□ Book with Disk: \$65

WHY DEC AND INTEL CHOSE THE MARK WILLIAMS C-COMPILER.

DEC and INTEL wanted the best C technology available, with excellent code density, supporting the full C language and their specific operating environments—all at a competitive price.

They found it all at Mark Williams.

WHY YOU SHOULD CHOOSE THE MARK WILLIAMS C-COMPILER.

Our C-compiler supports the dominant 16-bit microcomputers—68000, PDP-11, Z8000, 8086—with a proven reliable, high-technology product. We are shipping versions of C for a large number of environments including CP/M and PC DOS. Both cross and native compilers are available.

Call us for the distributor nearest you. OEM's should contact us directly about their specific requirements.

Mark Williams Company,
1430 West Wrightwood, Chicago, Illinois 60614,
312/472-6659.

For the IBM PC™ Users Who Want More Than Down-To-Earth Computing Power...

Nothing But The Best: Expansion Products From SIGMA DESIGNS.

SDI-STACK BOARD:

- Socketed, User-Expandable 64KB-256KB of RAM. When used "piggyback" with our SDI-ESC Enhanced Support Card, will make available up to 512KB of Memory
- Additional Async Port

SDI-ESC Enhanced Support Card:

A Five-Function Board, to meet all your present and future needs, in one single expansion slot.

- Memory: 64KB-256KB of RAM
- RS-232 Async Serial Port
- Printer/Parallel Port
- Clock/Calendar
- Game Adapter
- Dual RS-232, up to 512KB when used with SDI-STACK BOARD

FREE SOFTWARE included with memory cards:

- **SOFTDISK:** Emulates disk drive in excess memory
 - Single or Double Sided Formats • Allocate 32KB to 320KB memory as a disk • Faster operation than Winchester Drives • Reboot w/o losing data
- **SPOOL:** Buffer printer output in system memory
 - Allocate 32KB to 64KB for spooled output • Print while you work, fast output • Option to purge buffer

OTHER CARDS available:

- System Support w/o Memory
- Floppy Disk Drive Interface
- Floppy Disk Drive Interface w/Clock
- Memory Card w/Async Port (64K-256K)
- Expandable Memory Card (64K-256K)
- Non-Expandable 64KB Memory
- 64K Expansion Chip Set

FUTURE PRODUCTS:

- Expansion Chassis
- Winchester Disk Drive

Expand your possibilities with Concurrent CP/M™

If you have to wait impatiently for your personal computer to finish a job before moving on to another task, you need Concurrent CP/M. This new software technology from Digital Research increases the productivity of your IBM PC by allowing you to do more with it.

Using Concurrent CP/M, you can run several programs simultaneously, switching instantly from one program to another. For the first time you can write a letter while you do your financial planning. For the first time you can write text while printing other documents. For

the first time you can edit programs while your program compiles. Concurrent CP/M is the best investment you can make in microcomputing because it multiplies the value of your hardware and lets you use all the CP/M compatible programs. And if you're developing software, it ensures that you're on the crest of the hottest new wave in the business.

So quadruple the effectiveness of your IBM Personal Computer with Concurrent CP/M. Now available through the CP/M Library™. See your local microcomputer dealer or contact Digital Research, 160 Central Avenue, Pacific Grove, CA 93950 (408) 649-3896.

Now your IBM PC can do more than one thing at a time.

This new battery-powered portable with a unique fingertip "mouse" can be a powerful tool for mobile professionals—especially when it's teamed up with a compatible PC.

Gavilan: The Moving Finger Writes . . .

Gavilan

Gavilan Computer Corp.
240 Hacienda Avenue
Campbell, CA 95008
408-379-8000

List Price: \$3,995, printer \$985

The world is shrinking into a global village, at least for some of its citizens, just as McLuhan said it would. Doctors, accountants, and sales personnel trot from one side of the country to the other in the course of their daily duties. Sometimes, using personal computers, they can send their urgent information on ahead of them, modem to modem. But what if one wants to massage some data from the desktop PC while in transit, and be able to present it as a printed report to a client on arrival?

The makers of a brand-new portable computer, the 16-bit Gavilan, claim to have a way to solve this problem with the touch of a finger. This battery-powered portable is based on the Intel 8088 microprocessor chip and runs MS-DOS as well as its own proprietary operating system.

The main unit integrates a display, keyboard, CPU, memory, auxiliary memory capsules, and rechargeable battery pack into a single package. Its total weight is only 9 pounds, or 14 pounds with optional printer. The unit measures 2.75 inches high, and 11.4 inches wide and long; even

with the printer attached, the unit slips easily into an average-sized briefcase.

Gavilan Computer Corporation intro-

duced the unit at COMDEX/Spring in Atlanta, Georgia. The Gavilan system is aimed at the "mobile professional" mar-

THE ONE AND ONLY CRAMBO

You've got a problem. Go to your favorite computer store. Ask to see their Combo Cards. Then ask about their RAM Cards. See the problem? Just too many to pick from. Now, ask to see the CRAMBO™. No problem. There's only one. Ours. Except you don't know what a CRAMBO is. You've probably guessed it's a Combo Card piggy backed to a RAM Card. So it only takes up one slot in your IBM/PC. That's right. But here are the details.

THE COMBO II CARD:

For **\$189** you'll get a Clock Calendar, Async Communications, Parallel Printer and a Game Adapter.

THE 512K RAM CARD:

It too, is only **\$189** with 64K of RAM installed. And when you need more RAM, 64K increments are available for \$64 each. And, SDRIVE, the electronic disk emulator, is available at no cost with the RAM Card.

You can buy either of our boards separately for use in the XT or PC expansion chassis. But only our boards can be piggy backed to give you the one and only CRAMBO. And for only **\$359**.

Go check out the CRAMBO at the same store carrying all those Combo Cards and RAM Cards. If they don't have the CRAMBO have them call us. **800/525-7674**. Or write: Apparat, Inc. 4401 South Tamarac Parkway, Denver, Colorado 80237, 303/741-1778.

ket—users who must carry their work with them from desk to desk, or even from city to city. The company offers those users what it calls a "mobila office," a compact environment that supplies all the basic needs of the traveling businessperson and can also accommodate specialized software.

Included in the system are an eight-

EACH MEMORY capsule contains lithium batteries that provide one year of storage backup.

line, 66-character flat liquid crystal display (LCD) screen, a built-in 3-inch 320K microfloppy disk drive, and a unique touch panel that performs all the functions of a standard "mouse."

The portala comes with 80K of internal memory. 48K of that memory is in ROM, which includes the internal user-interface software; the other 32K is available to the user as RAM. Users also receive a 32K RAM capsule, bringing the total up to 64K RAM in the unexpanded unit. Extra plug-in memory capsules can add another 128K.

Bundled software for the Gevilan consists of an industry-standard version of MS-DOS, with BASIC and Pascal, and the manufacturer's proprietary CapsuleWare, which includes the user-interface operating system, a word processor, a spreadsheet program, a "portable secretary," and a communications manager. The latter four are available as self-contained programs in "capsules," containers slightly smaller and thicker than a cigarette pack.

Input and output for the Gevilan are provided through an RS-232C serial interface, a built-in 300-baud modem, a direct phone interconnect, and a system I/O bus. A rechargeable NiCad battery pack will operate the machine for up to 8 hours of continuous use. Also, each memory capsule contains lithium batteries that provide one year of storage backup; a similar battery keeps memory refreshed in the main unit. Use of CMOS circuitry keep the

Gavilan's energy consumption low.

The Gavilan costs \$3,995; its printer, a full-page thermal dot matrix unit with a sheet paper feeder, costs \$985. Other options will be available, including an acoustic coupler/modem, a power adapter that connects to a vehicle's cigarette lighter, an attachable second disk drive, and memory expansion module. The prices for these peripheral devices remain to be set.

Gavilan's Target

When Manny A. Fernandez, president of Gavilan Computer, and his founding partners first decided to build the system, they began with three simple must-haves: the machine had to be battery-operated, it had to be briefcase-size, and it had to be IBM PC compatible.

Gavilan's founders formed the company in February 1982. Fernandez left his position as president and chief executive officer of Zilog, Inc. to head the new company. Two other founding partners—Wayne Sennett, vice president of sales, and John Banning, Ph.D, vice president of software development—also came from Zilog. Their departure was amicable, noted Fernandez, as evidenced by the fact that Gavilan's offices are nestled in the Zilog building complex in Campbell, California.

It took the trio 4 months to raise their first venture capital. The privately-owned firm has been capitalized by a group of venture-capital investors that includes New Enterprise Associates; Abingworth, Ltd.; Smith Barney Venture Corp.; Associated Venture Investors; Genasis; and Robertson, Colmen, Stephens & Woodman. This year Gavilan has established a \$17-million line of credit with Bank of the West, a wholly-owned subsidiary of Banque Nationale de Paris.

Fernandez envisions the ideal answer for the Gevilan system as the person who works in a "multiple-desk environment." Outside the office, desks could be a desk at home, several desks spread through several buildings of one company, a client's desk, or even the tray on the back of an airplane seat.

"Mobile professionals don't want to take a week, a month, learning how to use a computer. Therefore, the machine had to be very easy to learn," said Fernandez. The company sought input from several industries that harbor a large number of

such professionals, trying to understand how the machine could best help them perform their daily business. Fernandez quoted research estimates that predicted an untapped market of 16 to 20 million customers, all first-time users, who could benefit from the Gavilan.

To accomplish the twin goals of portability and ease of use, the system embodies several technical end software innovations. Patent applications are pending for technology involved in the touch panel and the proprietary software; Banning and Fernandez, however, wouldn't specify which processes they wanted to protect.

The Fingertip Mouse

The most visible variation on the portable computer theme is the Gavilan's touch panel, located directly above the full-size typewriter keyboard. With this panel, you can manipulate data without typing a single character—the panel acts as a stationery "mouse." Most of your interactions with the system filter through this panel.

As you move your finger on the panel, the cursor moves on the screen. To command the machine to act, you move the cursor to the desired function and tap the screen, signaling the system to go ahead. The panel senses the relative position of your finger, and moves the cursor in the same direction you move your finger, regardless of the finger's initial position

AN EXTREMELY clear Help facility will answer queries on the level of "What just happened? Where am I? What do I do next?"

on the panel.

The "human-interface software" for the touch panel makes it particularly easy for the novice user to grasp the fundamentals of using the Gavilan. Benning estimates that a first-time user could work with the unit after only 15 to 30 minutes of instruction.

Date categories are illustrated with

graph symbols on the highly-visual LCD screen; some symbols are mildly humorous, such as the blinking hourglass that indicates the system is still completing an action. The symbols are modeled on everyday office items (such as the file drawer, desktop, and telephone) to clarify their purpose as much as possible. The screen output can also drive a 24-line 80-character video monitor.

An extremely clear Help facility, which can always be accessed without interrupting ongoing computations, phrases its counsel in lucid language. The Help menu's design, Banning said, was inspired by the thought of "What does a person ask when he's sitting down in front of a computer and not understanding things?" As a result, Gevilan will answer queries on the level of "What just happened? Where am I? What do I do next?"

Gevilan hed to write its own language, Interpac, to implement this user-interface software. "It's oriented toward being a very compact code, an interpreter, but

designed to minimize the overhead that's been traditionally associated with interpreters," said Banning, who led the software team that developed the language. Interpac, derived from FORTH, was designed to take up as little space as possible while still permitting high-quality software engineering.

The language, Banning said, inverts the traditional relationship between the operating system (or the built-in software of the unit) and the applications programs a user plugs into the unit. "What we call the human-interface software cells entry points in the application program for it to do specific things," said Banning. Answers are "context-sensitive"; that is, they refer to what the user is working on at a particular moment, rather than to an absolute definition of a command.

Banning explained, "I use the same cell to copy a document from one place to another as I use to copy a paragraph from one document to another. It's all just called the copy operation."

"From the end-user's point of view

we've eliminated the idea of a program. He doesn't operate the spreadsheet program—he deals with a document. He can create things in the document that happen to be produced by the different applica-

GAVILAN
doesn't plan at this time
to sell its system
through retail stores.

tions plugged in the unit, but the system's switching from one program to another is nothing more than switching from one kind of thing in a document to another."

As a novice user, I offered myself as a guinea pig to examine a prototype model of the unit at Gevilan's headquarters. I found that the touch panel lived up to its advance billing. The pressure of my fingernail or tap of my finger called up a series of instructions on the LCD that were clear and informative without being condescending. I completed instruction sufficient to begin operating the Gevilan in less than 10 minutes.

Working With OEMs

Though the Gevilan's target market is the mobile professional, the system won't be sold directly to those users. Instead, it will be distributed through original equipment manufacturers (OEMs) of hardware, software OEMs, volume end-users, and distributors who will work mainly with multi-unit purchasers.

Any of these manufacturers can integrate the Gevilan products into its own line, perhaps under its own label. Software OEMs are expected to focus on specialized software for vertical markets, such as the insurance industry, and remarket the Gevilan in a total system. Gevilan will also sell to volume end users, usually large corporations that want to give their traveling executives and managers electronic tools.

The company had a choice between servicing end-users directly or developing distributor and OEM support, said Fernandez. Gevilan chose the latter. "Most personal computer companies don't do this," he said. "The whole idea is to bring about an environment in which people

PC/FORTH™

Why you should try FORTH on your IBM® Personal Computer . . .

- FORTH is interactive and conversational like BASIC, but twenty times faster!
- FORTH's performance is far superior to ordinary interpreted languages, and when carefully tuned can approach the speed of equivalent assembly language programs.
- FORTH's compiler includes constructs that support modular, structured programming.
- FORTH is largely written in itself and is highly portable (can you imagine a BASIC interpreter written in BASIC?)
- FORTH includes a user-controlled virtual memory facility for program text and data.
- FORTH permits easy user definition of new data types and control structures.

PC/FORTH is available for PC-DOS, CP/M-86, and Concurrent CP/M® .

PC/FORTH is compatible with PC-DOS 2.0, the PC/XT, and all hard disks.

PC/FORTH™ \$100.00

Includes Interpreter/compiler with **multi-tasking** and virtual memory management, screen editor, assembler, debugging aids, many demonstration programs, and 150 page manual. PC/FORTH uses standard disk files for program and data storage.

PC/FORTH + \$250.00

Allows creation of FORTH programs up to 1 megabyte in size!

FORTH Cross-Compiler \$300.00

Used to produce dedicated disk or ROM based applications. No license fee for compiled programs. Choose target micro-processor from Z-80, 8080, 8086/88, 68000, LSI-11, or 6502.

Extension packages

PC/TERM for Smartmodem	\$ 60.00
QTF + editor/text formatter	50.00
Software floating point	100.00
Intel 8087 support	100.00
Advanced color graphics	100.00
Interactive symbolic debugger	100.00
PC/GEN custom character sets	50.00
Hierarchical file manager	50.00
B + Tree index manager	125.00
B + Tree index and file manager	200.00
Cross reference utility	25.00

"Starting FORTH" tutorial . . \$ 16.00

PC/FORTH requires 48 kbytes RAM and 1 disk drive. Cross-Compilers require 64 kbytes RAM. All software distributed on single-sided double density soft sector diskettes. Prices include shipping by first class mail or UPS within USA and Canada. California residents add appropriate sales tax. When ordering, specify PC-DOS, CP/M-86*, or Concurrent CP/M-86 please!

can write software for our product easily, so the OEM can be able to leverage all of the software to its maximum."

The Gavilan will not be available to individual users; the company doesn't plan at this time to sell its system through retail stores. European sales are supported by the Gavilan office in Geneva, Switzerland; sales to the Asian/Pacific market are managed out of the company headquarters in Campbell.

Fernandez said that Gavilan had "a considerable amount of backlog on the product already"; he would specify only one company—IKOSS, a West German software value-added OEM—as having already placed an order for the product.

How does the Gavilan compare to one of its major competitors, the Grid? Banning said that "Grid is going after quite a different market. Obviously, it's a bit more expensive. Also, you're really tied to the phone line." Banning pointed out that the removable memory storage of the Gavilan is more convenient than the Grid's built-in bubble memory; also, the fact that the Grid is not battery-operated might make it less portable than his company's product.

Gevilan sees its system as an adjunct to the IBM PC, rather than a rival. "Our strategy is to coexist with PCs," said Fernandez. In its MS-DOS environment, he added, the system can run any MS-DOS compatible program; with the right conversion software, he claimed it could topload or download any program.

"Although it would make a reasonable desktop computer in itself, especially if you plugged in a video monitor and hooked up a second disk drive on the back," said Banning, "it can also be looked at as a very nice adjunct to a home- or office-based computer. This is what you take with you when you're not in the office. If you have a PC in your office," he continued, "that runs SuperCalc and SuperWriter, for instance, the most effective way to use the Gavilan is to run those application programs on it as well and then transfer the files back to the office computer when you've finished."

The Gavilan was intended to be compatible with the PC, but this portable with a facile user-interface might be powerful enough to be all that some professions will need. Fernandez offered these PC users a message: "It doesn't take \$10,000 to have a Lisa or an IBM PC with VisiOn on your desk—it takes \$3,995." /PC

INTRODUCING
BUSBOARD™
FROM LNW COMPUTERS

THE ULTIMATE SOLUTION TO THE PC EXPANSION DILEMMA.

Every owner of an IBM PC, PC II, PC XT or PC compatible computer has a terrific personal computer, and one great big problem. With all the different peripheral applications and functions available today, how do you take maximum advantage of your computer when your computer gives you so few expansion slots to take advantage of?

Until now there has been one basic solution with a multitude of ingenious, yet ultimately unsatisfactory, variations. You could, in effect, increase your expansion capability by buying a single circuit board configured with a super, maxi, ultra, mega collection of functions and applications built right into it.

Busdrive™
Spoolbus™

LNW SOFTWARE

The only difficulty with that approach, though, is that you end up getting the solution to somebody else's problem. What happens when you want a different set of peripherals than is commonly asked for? Either you don't get what you want, or you end up getting—and paying handsomely for—a bunch of unwanted circuits. And then what happens if you decide to add a function later on? or your computing tasks change? or a new peripheral becomes available? Every option you have will cost you a bundle.

THE BUSBOARD SOLUTION

Now from LNW Computers comes the perfect solution—a circuit board so versatile that it comes with 64K of built-in RAM (expandable to 512K) and the ability to accept up to eight different peripheral modules in easy plug-in design. We call it the Busboard™, and you'll call it the answer to every expansion dream you've ever had.

With the Busboard™ you'll be able to design an expansion board with the specific solutions to your specific problems. You can add a single coprocessor and 6 I/O devices, or up to 8 separate I/O devices on a single board. You won't have to pay for functions you don't want, and you can buy additional modules as you need them or can afford them. You can take modules off or add them on, and you'll never have to worry about obsolete boards when new functions become available. Your Busboard™ will always be able to accept the latest innovations in new product design.

And, because the Busboard™ is modular in design and construction, it costs a lot less than you might otherwise expect. You'll be amazed when you figure out the cost of a Busboard system custom-designed for your needs versus a preconfigured card designed for somebody else's needs.

The Busboard™ from LNW Computers.

When you look at your needs today and tomorrow, there just isn't any other intelligent choice.

IBM is a registered trademark of IBM Corporation. CP/M, CP/M PLUS, and CP/M-86 are registered trademarks of Digital Research, Inc. MSDOS is a registered trademark of Microsoft Corporation. Xerox is a registered trademark of Xerox Corporation. HP is a registered trademark of Hewlett Packard. Kaypro is a registered trademark of Kay Corporation. Osborne is a registered trademark of Osborne Computer Corporation. Tandy is a registered trademark of Tandy Corporation.

Busboard™
Allows for addition of I/O devices and additional processing power through coprocessor BUS. Can be used for slave, multi or compatible processing. Busboard comes complete with 64K of parity checking RAM and is fully expandable to 512K RAM in 64K plug-in increments. Maximum expansion to 704K allows for emulation of entire dual-sided disk drive, spooling of lengthy documents to RAM and full use of CP/M PLUS™ adapter card. Busboard™ also comes with BUSDRIVE™, a high performance disk drive emulator, and SPOOLBUS™, a multi-printer, auto/manual queuing printer spooler. Both diskettes are MSDOS™ (PCDOS) and CP/M-86™ compatible. **Suggested retail \$349.95.** RAM-less Busboard™ is available without coprocessor slot and RAM. Can be used exclusively for I/O module expansion. **Suggested retail \$129.95.**

LNW80™ CP/M PLUS™ Coprocessor Module. Z80A microprocessor based module allows running of programs under CP/M PLUS™ operating system as well as old CP/M® 2.2 system. Allows PC to run extensive library of CP/M® programs compatible with LNW80™ Model II computer from LNW Computers and computers from Xerox® HP® Keypro® Osborne® Tandy® and others. CP/M® system supports 1/2" Floppy Disk I/O Module for use with both 5" and 8" disk drives. (Occupies 2 module slots). **Suggested retail \$249.95.**

Asynchronous Communication I/O Module.

Can be programmed as standard IBM COM 1 and COM 2 channels, or can be set to 13 additional unique addresses. This allows each Busboard™ to contain up to 8 separate serial asynchronous channels with a total of 15 different channels. Can be configured as DTE or DCE. **Suggested retail \$79.95.**

1/4 Floppy Disk I/O Module.
Replaces disk controller in PC and provides interface for both 5" and 8" disk drives. 8" operation allows compatibility with diskettes from other CP/M-86™ and CP/M™ systems. 8" drives also increase disk capacity to 4.5 Mbytes and speeds up disk drive operation.
Suggested retail \$169.95.

Parallel Printer I/O Module.
Interface can be set for LINE PRINTER 1 or LINE PRINTER 2 port addressing. Can also be set for optional LINE PRINTER 3, or can be used as simple, general purpose 8-bit I/O port.
Suggested retail \$49.95.

Clock Calendar I/O Module.
Crystal controlled clock/calendar keeps track of time in hours, minutes and seconds, and features a complete calendar with the year, month and day with automatic leap year compensation. Supplied with software to operate in both CP/M-86™ and MSDOS™. Also includes back-up battery and Alarm function.
Suggested retail \$69.95.

Game I/O Module.
Connects to any IBM compatible joystick or paddle and is compatible with IBM PC game I/O card. Allows for connection of 4 buttons and either 2 joysticks or 4 paddles.
Suggested retail \$49.95.

16 Channel Analog Input A/D I/O Module.
Instrumentation module features 16 independent multiplexed analog input channels with 8 bits of resolution per channel.
Suggested retail \$109.95.

8 Bit I/O Module.
Provides for latched 8 bits of output and an optionally latched 8 bits of input with interrupt capability fully supported. Port addressing is user programmable for up to 8 modules per Busboard™.
Suggested retail \$59.95.

Prototyping I/O Module.
Utilizes 3M Scotchflex Breadboard prototyping system, and allows for rapid development of prototype products for the IBM PC. Comes complete with 40 conductor I/O BUS connector and an assortment of prototyping pins.
Suggested retail \$29.95.

Auto-Answer, Auto-Dial, 300 Baud, Direct-Connect Modem I/O Module.
Features auto-answer and auto-dial in tone or pulse to allow use of low cost, long distance services. Program listing supplied allows for smart modem under BASIC. Speed dialer program included. (First delivery pending FCC registration)
Suggested retail \$149.95.

EASE OF USER INSTALLATION

The Busboard™ was designed for ease of installation and reconfiguration. Modules simply plug in and out by hand and require no special installation procedures.

NEW BUSBOARD MODULES

In order to give you the greatest degree of custom-design flexibility, LNW Computers will be releasing new Busboard™ modules reflecting both the latest technological innovations and the most practical function applications. The following is a sample of the modules scheduled for release in the months ahead:

- Short Busboard (Shortboard) for the XT and newer PC's
- 8088 Coprocessor Module
- EPROM Programmer I/O Module
- Speech Synthesis I/O Module
- D/A Converter I/O Module
- Network Controller I/O Module
- Synchronous Communication I/O Module
- Relay Control I/O Module
- Hard Disk Controller I/O Module
- IEEE488 Interface I/O Module
- BSR X10™ Controller I/O Module
- DTMF (Touch Tone™) Decoder I/O Module
- External Connector Mounting Bracket

All Busboard modules and accessory products are available at leading computer stores nation-wide. For more information or the dealer nearest you call, 714/544-5760.

CIRCLE 393 ON READER SERVICE CARD

How to select the right software for your home or office computer.

The 1983 Software Buyer's Guide saves you time, trouble and money!

Today's explosion in computer technology has multiplied the software options for your personal or business computer. Without expert help, you can get lost in the jungle.

That's why the editors of **Creative Computing** have compiled the **1983 Software Buyer's Guide**.

Here—in one handy guide—is a comprehensive collection of up-to-date software reviews from our magazine. It's the one and only reference you need to select the software that's right for you.

In this guide, the latest software products are tested and evaluated by experts at **Creative Computing** who know computers inside out. You'll get their candid, unbiased recommendations on software for:

- business
- word processing
- graphic displays
- intellectual recreation: strategy, fantasy, adventure, action simulation and arcade games.
- financial and investment analysis
- real estate and property management
- music
- education

Each thorough, easy-to-read review contains:

- **Complete descriptions** of software programs and analysis of their strengths and weaknesses.

- **In-depth evaluation** of program efficiency. What tasks is it best suited for? How "user-friendly" is it? What is the screen display quality?
- **Photos and illustrations** so you can actually see how the software package works.
- **Quick-reference boxes**—an at-a-glance checklist of system requirements, formats, language, price, manufacturer, plus ratings for each program.
- **And more!** Including hard facts and figures to back up our opinions. And comments from people who actually own and use the programs.

Included in this new edition are practical programs like TKI Solver, Vision, Paint, and Video Easel and Slide Show—plus the latest games for Color Computer, TRS-80, Apple, Atari, and more!

You'll also find step-by-step guidance on buying a word processor, database manager, educational or recreational software.

And once you decide on the programs you want, you can find out where to get them through the convenient directory of manufacturers that's included.

With the **1983 Software Buyer's Guide**, everything you need to know about buying software will be right at your fingertips. That saves you time and trouble.

You'll also buy the **right** program the **first** time. That saves you money.

Get the hard facts about software in the **1983 Software Buyer's Guide**. Send for your copy today. Only \$4.95!

DATA CAPTURE™/pc

The most advanced and easiest to use telecommunications program for use with the IBM® Personal Computer.

Software designed with you in mind!

It helps you do all this . . .
SO EASILY!

If you use your IBM Personal Computer to communicate with other microcomputers or timesharing systems, then you need **DATA CAPTURE™/pc**.

Specifically designed to take advantage of all the power and capability of your IBM Personal Computer but does not require you to be a computer expert to use it!

The version of **DATA CAPTURE** for the Apple II was selected as number one in its category and number thirty-one overall in a Softalk magazine reader poll (April 1982).

See your dealer today for a demonstration of **DATA CAPTURE™/pc** or order direct from Southeastern Software.

Information For Wise Business Decisions

now

SOLOMON

Accounting Software is available
for your IBM Personal Computer®

Solomon offers the most sophisticated accounting software system for microcomputers.

Easily set up, the remarkable Solomon software package operates from a single database managed by the MDBS™ database management system utilizing the industry standard operating system—CP/M.™

Solomon is faster, more powerful, more flexible, easier to install and easier to use than other systems.

The Solomon I System handles general ledger, payroll, accounts payable and receivable, invoicing, fixed assets, cash receipts and disbursements and address list maintenance.

The Solomon II System includes all these functions plus a job management package that can be used by engineers, architects, consultants, contractors and other service businesses.

Now you can have instant information for wise business decisions—with Solomon Series Software by TLB—from Computech.

Hardware requirements:

- 64K RAM
- Baby Blue™ CPU Card
- 132 Column Printer
- Hard Disk Recommended

CIRCLE 210 ON READER SERVICE CARD

The Canadians have devised a system to create, transmit, receive, and store computer graphics by adapting ASCII. With the right software this capability is available for the PC.

EXPORTING GRAPHICS WITH NAPLPS

Examples of Telidon-generated color graphics.

Databases are everywhere. The Source and CompuServe are the best known, but there are dozens of others, offering services ranging from news and stock market prices to computer dating. You can connect any computer or terminal in the country to these databases over ordinary phone lines.

Without ASCII, the American Standard Code for Information Interchange, none of these computers could understand each other. ASCII assigns a 7-bit code to each number and letter and to a set of standard controls, allowing everyone to use the same codes. Under ASCII, everyone agrees to encode the letter A as 1000001 and the carriage return as 0001101, allowing you

to send messages from your PC to the Source, or receive messages on your PC from your friend's Apple.

But how do you encode a picture of a red house with a yellow roof? How do you encode a bar chart showing last year's profits? How do you send a picture to another computer in a way that the other computer will understand? Is there an ASCII for graphics communication?

Hallelujah, the answer is yes! A powerful new graphics communications system imported from Canada can now help you perform the functions mentioned above. Although it hasn't yet gained the universal acceptance extended to ASCII, it is backed by AT&T, CBS, and Time Inc. Further, it

hasn't any serious rivals, and in an industry hungry for standards it satisfies a real need. It's called the North American Presentation Level Protocol Syntax—NAPLPS—pronounced "nap-lips" by the irreverent. NAPLPS makes graphic information portable, just as ASCII does for text. It also makes graphic data banks possible, creating a new realm of computer use for the average citizen.

Instruction Codes

The NAPLPS encoding scheme is based on alpheageometric descriptions of graphic images. Using a set of five primitive graphic elements—point, line, rectangle, arc, and polygon—and following

instructions for text, colors, fill patterns, and outlines, NAPLPS constructs a description of an image: "Go to the middle of the screen. Set the color to red. Create a filled rectangle, 2 inches to the side. Go up 2 inches. Set the color to yellow. Begin defining the polygon. Go up 1 inch and to the right 1 inch. Define this as the second point in the polygon. Go down 1 inch and to the right 1 inch. Define this as the third and final point in the polygon." These instructions generate the image of a little red house with a yellow roof.

Each of the instructions in the example is called a "picture description instruction," or PDI. Like ASCII, each instruction is written in a 7-bit code. The 7-bit code for "set color," for example, is 0111100, and the code for red is 1010010. These strings of bits also have meaning in the ASCII coding scheme. The set color code, for example, also stands for the "less than" symbol (<) in ASCII. To avoid the possibility of confusing the intent of the code, NAPLPS uses a special code to "shift in" and "shift out" of the graphics mode. When in graphics mode, 0111100 means set color, while out of graphics mode it means "less than". Thus, a picture encoded in NAPLPS can also include text, and the text codes are the standard ASCII codes.

The string of PDIs for the little red house consists of about 307-bit characters and can be used in the same way as an ASCII string. You may transmit it to another computer; store it in a database; and index it, locate it, or manipulate it with the facilities of the database. To convert the string into a picture, you need a combination of hardware and soft-

Figure 1: Example of "dynamically-redefinable character sets" (DRCS), in this case, Arabic letters, generated with Teligraph.

NAPLPS MAKES graphic information portable, just as ASCII does for text.

ware that can interpret the string as PDIs, and display it on a color screen.

The NAPLPS PDI standard is very powerful. It's completely resolution-independent, allowing the same PDI string to be decoded and displayed on a 600 pixel by 600 pixel color graphics monitor, on a

standard TV set, or even, in a rudimentary form, on an 80-character by 24-line character terminal. Because NAPLPS relies on standard 7-bit units, any hardware that can handle ASCII characters—ordinary modems and phone lines, TV cables, and local networks—can handle NAPLPS pictures. (The NAPLPS PDI scheme is also available in an 8-bit version, which is even more powerful.) Since the picture consists of meaningful constituent parts, picture elements (often called "objects") that are frequently used can be stored on a disk and incorporated in any other picture. The geometric nature of the description allows the computer to scale, rotate, and reflect images. If you were creating a long document, for example, you could save the corporate logo as an object, then place it anywhere in any new picture in whatever size you desired.

Videotex

NAPLPS is descended from the Cana-

dian videotex system called Telidon. Videotex, in the broadest sense, refers to any publicly-accessible computer database; the Source sometimes refers to itself as a videotex service. Most discussions of videotex use a somewhat narrower definition: menu-driven, user-friendly database (and interactive transactional) services aimed at a broad home market and that make heavy use of graphic information. This definition stems from the theory that the average person will not use computer databases unless they communicate—at least in part—with pictures. In order to use pictures in a database, however, they must be codable and decodable.

Soon, hardware decoders that use television screens as displays will probably be available to home videotex subscribers for \$300 or less. A hardware decoder, which includes a modem or other communications device, a microprocessor, and ROM software, interprets the incoming signals and drives the display. It also includes a

keypad resembling a pocket calculator that is used to choose items from menus. The keypad actually sends signals back to the host computer, telling it which pages to transmit. (Hardware decoders for NAPLPS or Telidon are not yet available for \$300. Decoders that can be attached to your TV set cost about \$1,000, and decoders that include their own high-resolution color monitors cost about \$2,500.) Home terminals are connected to host computers using telephone or TV cable networks.

The videotex host computer's database consists of "pages," "frames," or "screenloads" of information. Each page is a static picture that fills the screen and each is numbered. For example, if you know that Montgomery Ward's shoe department inventory is displayed on page 3226, you can key "3226" on your keypad, commanding the decoder to send this information back to the host computer. Page 3226 will then be decoded and displayed on your screen. Since you are not expected to remember all the page numbers, many pages are contained in the menus. For example, given a choice of 1-News, 2-

Sports, and 3-Shopping, keying 3 will provide another menu page offering further choices, such as Clothing, Housewares, and Cosmetics. Hunting through the menus, you will eventually reach the shoe page.

The essential features of this system are page-by-page encoding of information,

***T**HE VIDEOTEX host computer's database consists of "pages," "frames," or "screenloads" of information.*

a tree-structured menu-driven system, and interactivity between the host computer and the decoder.

In existing Telidon/NAPLPS videotex

databases, pages are created on an Information Provider System (IPS). An IPS is a \$15,000 microcomputer-based machine with two disk drives, a graphics tablet, a color screen to show you what you've created, a black-and-white screen to present instructions and menus, and a keyboard to enter instructions and text. With an IPS, you can create the simple little house in about 4 seconds. Two keys tell the IPS that the color should be red, and another two tell it to "create a rectangle." When the artist touches two points on the graphics tablet, and a red rectangle appears on the color screen instantly. The two points become opposite corners of the rectangle. Four more keys set the color to yellow and tell the IPS to "create a polygon." The artist then touches the three points corresponding to the three corners of the roof and it appears instantly. A much more complicated polygon can be created just as easily by touching each corner. Using an IPS, you can create a high quality color image as fast as you could sketch it with pencil and paper.

After the pages are created on the IPS

The Printer Store, 1983

CIRCLE 338 ON READER SERVICE CARD

(the strings of PDIs describing the pages are defined and stored on the IPS disks), they can be transmitted to a mainframe computer or carried there on disks. At the mainframe, they can be integrated into a videotex database. All the numbering, indexing, and linking of "Shopping" to "Clothing" to "Shoes" pages takes place at this stage.

NAPLPS images can also be used to create a slide show. A set of NAPLPS pages can be created on an IPS, then loaded into the RAM of an Electronic Projector System (EPS). The EPS is connected to a picture decoder and can be run in the same way as a random-access slide projector (punching "877" on the keypad causes the PDIs for page number 877 to be transmitted from the RAM of the EPS to the decoder), or it can be programmed to cycle through the pictures automatically, allowing you to vary the interval between them. An EPS costs approximately \$2,500.

PC Software Applications

What has all this got to do with your PC? In a word: everything. Although NAPLPS functions are typically performed by machines costing thousands of dollars, none of them is beyond the capacity of your PC.

Decoding a page? If you can get the PDIs for the page into your PC through its RS-232 port, then PC software could interpret it and drive the graphics board and the color monitor. (Decoding is even within the capacity of machines as small as a

PC.

Timex Z81, if you're prepared to wait for the decoding to be completed.)

Database management? Once the PDIs are on your PC disks, they can be moved,

Personal Computer SMARTWARE™

Telidon and NAPLPS: Canadian Success Stories

Both the Telidon standard and its offspring, NAPLPS, have caused quite a stir on the European computer front—and they are making inroads south of the border.

NAPLPS is the son of Telidon, and Telidon is a child of the Canadian government's Department of Communications.

The Telidon standard was proposed in 1978 by a scientific research team headed by Dr. H.G. Bown at the Department of Communications. Dr. Bown's team observed that several European countries were beginning to develop videotex standards (standards for home-delivered computer graphics) based on an alphamosaic graphic encoding scheme, in which a picture is divided into a fixed number of gridcells, each cell containing one of a fixed set of small "mosaic" shapes. The greatest advantage of the alphamosaic encoding scheme is that it can be decoded by a very inexpensive unit. Unfortunately, it produces unattractive graphics, and is very hardware-dependent since higher-resolution screens cannot produce better images than lower-resolution ones. Compounding the problem, alphamosaic encoding is quite memory-intensive.

The Canadian team reasoned that the greatest appeal of the alphamosaic scheme—the simplicity of its decoders—would diminish dramatically as the price of electronic circuitry decreased. In a paper published in Ottawa in December 1978, the team proposed an "alpha-geometric" encoding scheme in which each of the five primitive graphic elements (point, line, rectangle, arc, and polygon) is used to construct the description of an image. The scheme was the basis for NAPLPS, proposed by AT&T in the U.S. in May 1981.

The battle between Canada's alpha-geometric standard and the European alphamosaic scheme continues, not because anyone argues that alphamosaic is superior, but because it has more of a track record in home applications and because it's still somewhat less expensive.

Government Support

Meanwhile, the Canadian government has given considerable support to Telidon and now NAPLPS. The reason is financial. Since Canadian manufacturers and developers have been producing software and hardware for Telidon for several years, they have a headstart if a Telidon-based system gains wide acceptance. The software and most of the hardware described in "Exporting Graphics With NAPLPS" is designed and manufactured in Canada.

Because the Canadian government is promoting Telidon- and NAPLPS-based hardware and software, Canadians are more familiar with videotex than Americans are. In several Canadian cities, hardware decoders can be seen in shopping centers and other public places (see Figure 2), giving citizens access to a variety of databases. The Grassroots database in Manitoba contains hundreds of pages that are of interest to farmers, and is installed as a demonstration project in several hundred homes. The Teleguide database, sponsored by the Ontario government, provides information on tourist sites in and around Toronto and Ottawa from terminals located throughout those cities. In addition, Telidon graphics have appeared on the community information channels provided by many cable TV networks in the country.

Videotex in the U.S.

Telidon/NAPLPS-based experimental systems are being used in a number of U.S. cities as well. In cooperation with Canada's Infomart Limited, the Times-Mirror Group of Los Angeles operates the most comprehensive U.S. videotex project, providing information to 350 homes in Los Angeles and Orange counties. The CBS Teletext service, due to start broadcasting soon, will also use the Telidon/NAPLPS standard for its graphics. Through Teletext, a one-way version of videotex, pages of information are broadcast along with normal TV pictures and decoded by special home equipment. —J.H.

MergeCalc™ \$125

- Consolidates VisiCalc® spread sheets
- Compares two or more VisiCalc® spread sheets

Applications MergeCalc merges VisiCalc® files and extends the utility of VisiCalc®. One of the shortcomings of VisiCalc® is the inability to consolidate, merge or manipulate multiple VisiCalc® models automatically. With MergeCalc, you can perform operations between your models without changing the models in any way. MergeCalc is ideally suited to add segments of a total business into a consolidated model. This enables all types of complex analyses, such as variance analysis, percentage change reports, time change reports, share of market analysis, incremental sales or investment analysis.

LoadCalc™ \$95

- Converts textfiles to DIF™ files

Applications: LoadCalc creates DIF files from textfiles, so you can move mainframe or minicomputer data into VisiCalc®, Visi-Trend/Plot, VisiWord or any program that uses DIF. LoadCalc allows selective conversion of the data, so you only get what you want. No programming required. With LoadCalc you can load "Actuals" from the mainframe into your "Budget" spreadsheet and compare the numbers.

DocuCalc™ \$95

- Prints organized documentation of VisiCalc® spread sheets

Applications: You need DocuCalc if you are building fairly complex VisiCalc® models and want an easy way to review your work. It also makes your models easy for someone else to review—even if they don't understand VisiCalc®. If you are an auditor and your clients use VisiCalc® for essential business reports, you can meet all audit requirements easily with this program.

retrieved, and transmitted in the same way as any string of ASCII characters. PCs equipped with the proper modems and communications ports can act as hosts for PC bulletin board systems, and as hosts for NAPLPS graphics databases. Creating pages? Although this is the most complex task, it too is within the scope of a PC. Compared to these functions, producing slide shows is a minor affair.

Three software programs developed in Canada demonstrate that it's possible to perform all of these functions using a PC. Among them, they can accomplish all of the applications I've discussed so far.

Microteure, a company based in Ottawa, has produced a powerful and sophisticated program called TeliGraph, which is used for creating and decoding NAPLPS pages. TeliGraph lists for \$400 and can be used to create graphic pages on your PC and transmit them to a remote database or to another computer, or to store them on

your PC for later use. You can also retrieve pages of NAPLPS graphics from other computers and display them on your PC. TeliGraph requires a color monitor, but it

PCs EQUIPPED
with the proper modems
and communications
ports can act as hosts
for NAPLPS graphics
databases.

costs much less than a hardware decoder would if you already have a PC. (Microteure promises to release a stripped-down, one-screen monochrome version soon,

based on Hercules Computer Technology's monochrome graphics card.)

Color is one of the weaknesses of any PC-based NAPLPS system. In NAPLPS, colors are encoded as relative amounts of red, green, and blue, and can be encoded to any degree of precision required, making the possible range of colors theoretically infinite. The standard PC color graphics board, on the other hand, can only deal with four colors. TeliGraph must map the colors encoded with the picture onto one of these four color choices. This may pose a problem. A simple outline drawing will survive the mapping intact, but a complicated weather map, in which several colors are significant, may lose much of its meaning when translated into just four colors.

Since many existing NAPLPS or Teldon databases assume the decoder will handle at least 16 colors (hardware decoders are able to do this), problems can arise.

Product	Company	Hardware Requirements	Page Creation	Database Management	Decoding
TeliGraph	Microteure, inc. P.O. Box 6039 Station J Ottawa, Ontario K2A 1T1 Canada (613) 745-6661 List Price: \$400	256K, one disk drive, monochrome and color monitors, driver cards	Yes	Rudimentary	Yes; displays images on color monitor (monochrome will not require two displays)
Tayson Software	Tayson Information Technology, Inc. P.O. Box 30104 Station B Calgary, Alberta T2M 4N7 Canada (403) 230-5998 List Price: \$2,500 range	64K, two disk drives, one or two asynchronous ports, decoder, two modems	Yes (but mostly a page editing facility)	Yes; can host for multiple terminals	No (separate decoder required)
MVI	MICROSTAR Software Limited 687 Mansfield Ave. Ottawa, Ontario K2A 2T5 Canada (613) 722-7426 List Price: \$280	128K, one disk drive, color adapter card and color or monochrome monitor, serial (RS232C/asynchronous) port, modem	No	No	Yes; displays images on color or black-and-white monitor (not IBM monochrome monitor)

Fortunately, TeliGraph supports the Colorplus board, developed for the PC by Frederick Electronics. This board fits into any PC expansion slot and provides 16 colors instead of the PC's usual four. (The Colorplus board will add about \$475 to the cost of a NAPLPS installation.)

TeliGraph also allows a picture to be dumped to a dot-matrix printer. Epson printers such as Graftax and a number of other models are supported. Colors are interpreted as shades of gray. Although NAPLPS pages won't be reproduced in all their glory on a dot-matrix printer, printer dumps are a very useful feature, especially in business applications.

Using TeliGraph

Creating pages of information using TeliGraph is surprisingly similar to using the \$15,000 IPS systems described earlier. Menus of instructions are displayed on the monochrome screen. A crosshairs-type cursor on the color display is controlled using the PC cursor control keys or a joystick. The standard right-left-up-down cursor keys move the cursor in the appropriate directions, and the other four numeric keys (1, 3, 7 and 9) move it diagonally. The Scroll Lock key toggles between fast and slow cursor movement.

To draw a picture you move the cursor to a starting point, define the type of graphic image you wish to create, and move the cursor to other points. The PC function keys (F1 to F10) are used to define the graphic image. For example, in order to build the little house, the cursor must be moved to the center of the screen. Pressing F1 tells the system where to begin drawing the picture. Moving the cursor to the diagonally-opposite corner of the rectangle and pressing F3 tells the system that this is the opposite corner of the rectangle. A rectangle would then appear on the color display screen. The yellow triangle would be constructed in a similar way: F4 would be used to initiate the polygon, and the plus key (+) would be used to add more points to it.

Colors are set by using the menus on the monochrome monitor. Text is added to a picture by using F7 to toggle into text mode, then keying in the text. The starting position of the text is defined by the cursor. Text strings can run up or down, from right to left, or from left to right. Letters can be oriented in any of four directions and can be produced in any of 512 differ-

ent sizes (counting horizontal and vertical scales), although some of the very tall and thin or short end wide sizes are of very limited usefulness.

When overlapping NAPLPS images are specified, the image specified last appears in front. (This feature can be used to sim-

ulate animation, with overlapping pictures replacing one another.)

TeliGraph also allows you to create "shapes," sets of PDIs that can be used together and then reused in different contexts. For example, a corporate logo or a map of the country could be saved and

FROM THE EXPERTS AT STEREO REVIEW

Improve your stereo's performance with this easy-to-use record!

You don't have to be an electronics whiz to improve your stereo's performance. With the Stereo Test Record, our step-by-step instruction booklet (included) and your own ears, you can adjust your stereo to extract the utmost from the recordings you enjoy.

The Stereo Test Record, designed by the editors of Stereo Review for amateurs and professionals alike, provides all these important tests:

- Cartridge tracking, high and low frequency
- Frequency response, 20 kHz to 25 Hz
- Separation left-to-right and right-to-left
- Broad-band noise for channel balance
- Cartridge and speaker phasing
- Low-frequency noise
- Turntable flutter
- Frequency-response sweeps, 500-20,000 Hz, left and right channels
- Tone-bursts
- Intermodulation distortion
- Anti-skating adjustment
- 1,000-Hz reference tones
- 3,150-Hz tone for flutter and speed accuracy
- Stereo spread
- Standard 'A', 440 Hz
- Chromatic octave
- Guitar tuning tones

Use the coupon to order Stereo Review's Stereo Test Record—the complete do-it-yourself stereo system check-out—for just \$9.95!

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSA RECEIVABLES™

\$99.95

VERSA RECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSA RECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSA LEDGER II™ and VERSA INVENTORY™.

VERSA PAYABLES™

\$99.95

VERSA PAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSA PAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSA PAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSA PAYROLL™

\$99.95

VERSA PAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSA LEDGER II™ system.

VERSA INVENTORY™

\$99.95

VERSA INVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSA INVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSA RECEIVABLES™ system. VERSA INVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSA LEDGER II™

\$149.95

VERSA LEDGER II™ is a complete accounting system that grows as your business grows. VERSA LEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

- VERSA LEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSA LEDGER II™ comes with a professionally written 160 page manual designed for first time users. The VERSA LEDGER II™ manual will help you become quickly familiar with VERSA LEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other computer systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

CIRCLE 260 ON READER SERVICE CARD

incorporated into future pages. The software doesn't include scaling or rotation, however. If you need logos in three different sizes, you must store a separate copy for each one.

The software also provides for what NAPLPS calls "dynamically-redefinable character sets" (DRCS). If you don't want to use the standard typeface for letters and numbers or if you need a Japanese or Arabic character set (see Figure 1), you can draw each character using a series of cursor movements and save an entire character set that will then be assigned to various keys. When you shift into this character set, the A key will produce the A in your new typeface, or it will produce the Japanese or Arabic (or other) character assigned to it.

When you're satisfied with the page you've drawn, TeliGraph stores the PDI string as a standard PC-DOS file, one page per file. A file can be sent to another computer in the same way as any other file, by using a modem, a serial port, and communications software.

If you have a 300- or 1200-baud Hayes Smartmodem, you can also use the communications module that is supplied with TeliGraph. This module allows you to retrieve pages and display them while online and cycle through databases interactively, in the same way as videotext systems. You can also store pages on your disks for later use and transmit pages that you have created.

TeliGraph also has a slide show feature for cycling through sets of pages. Pages can be created using TeliGraph, or they can be retrieved from a remote database.

Using TeliGraph, your PC can do most of the things that a \$15,000 page creation machine can, perform nearly the same functions as a \$2,500 hardware decoder, and mimic a \$2,500 EPS. Its most severe limitation is imposed by PC hardware,

The Word Processing System For Professionals.

All across the nation, PowerText has become the prime word processing system for professionals.

Businesspeople. Writers. Attorneys. Educators. Men and women who demand a level of performance not available from the mass-market word processors.

If you require a true high-performance system, consider PowerText.

Formatting is fully automatic.

PowerText prints the most complex documents—from business letters to dramatic scripts to legal documents packed with footnotes—precisely consistent with the formats you define. You need never worry about printed style as you write. Yet you always get perfectly formatted documents.

It's almost like dictating to your computer.

When you prepare outlines, questionnaires, and reports, PowerText can automatically indent and assign numbers to your paragraphs (Roman or Arabic numerals, or alphanumerics, as you direct).

There's a full complement of editing features, including "nested" editing, equivalent to split-screen editing.

You get built-in form letter capability. Remarkably versatile columnar capabilities.

User-definable function keys. And far more.

Yet for all its power and sophistication, PowerText is remarkably easy to learn and operate. The system includes an excellent 10-lesson tutorial and a reference manual.

We'll send you complete details.

It is impossible to describe all of PowerText's many valuable features here. But we'll be pleased to send you detailed information, including many samples of actual PowerText output.

Just write us a note, or phone us. (Or you may wish to send for the tutorial and manual. The cost is \$25. Please indicate which computer you have.)

which restricts display to four colors.

Tayson Software

TeliGraph won't act as a host NAPLPS database. To turn your PC into an untended NAPLPS database, you need host software, currently available only from Tayson Information Technology of Calgary and Toronto. Tayson considers itself a consulting firm rather than a retail software company. Consequently, its host systems are expensive (\$2,500 or more), though well-supported.

The software includes a page creation and editing feature, but it's not nearly as sophisticated as TeliGraph. For example, it doesn't allow you to create libraries of reusable objects, and its cursor movement isn't as simple. You can edit a page by changing a string of text or a color, but you must know quite a bit about PDI codes in order to make full use of this function. Tayson seems to believe that pages will be created using traditional IPS systems (or software like TeliGraph), then transferred to systems equipped with its software.

Tayson's strong point is database handling. Sets of PDIs are stored as fixed-length records, one page per record, in random access PC-DOS BASIC files. (The software is written in BASIC and compiled; you buy object code, rather than source code.)

A typical NAPLPS or Telidon database allows you to specify which page you want to see next by choosing a number from a menu, often in the 0 to 9 range, and then keying in your choice from a numeric keypad. It also includes keys with the less than (<), greater than (>), and caret (^) symbols. Tayson's database software allows you to specify which page in the file is represented by each user input. For example, an input of < could represent page 321; > could represent page 323; ^ could represent page 312; and 0 could represent page 1. The characters 1 through 9 can also be used to define pages. Although this is an extremely flexible database structure—it's not strictly a hierarchical tree—you must exercise caution when you design an index. If a given page is not listed in the index, you may become trapped in a "black hole."

Tayson's software currently allows two people to use a single PC simultaneously (if it is equipped with two RS232 ports and modems), and upgrades for up to 8 users will soon be available. The current

version requires 64K minimum memory, but Tayson recommends 128K. (128K is required for page editing; the 8-user version will require considerably more.)

Tayson's software assumes that you have a hardware decoder (or another computer equipped with decoding software) attached to the PC serial port. A decoder is necessary if you wish to use the page editing features or if you wish to retrieve pages from a Tayson database. If you are using a Tayson database, however, your PC cannot run TeliGraph or other decoding software at the same time.

MVI

The final piece of Canadian NAPLPS software for the PC is produced by Microstar Software Limited of Ottawa. Known as the Microstar Videotext Interpreter, or MVI, it is written in compiled BASIC and Assembler. MVI is simply a decoding and communications program; it has no page creation or data management features and it isn't even equipped to save pages that it retrieves while online to a database. On the other hand, it requires only 128K, a single color graphics board connected to any color display or to an inexpensive monochrome display, and any modem. In addition, the software costs a mere \$280. You can't get into NAPLPS for less.

TELIGRAPH
also allows you to
create "shapes," sets of
PDIs that can be used
together and can be
reused in different
contexts.

Before you decide to purchase MVI, you should be aware that it doesn't support the full NAPLPS standard. Since it works with the older Telidon standard, it cannot use the dynamically-redefined character sets created with TeliGraph. This isn't such a big disadvantage, since most of the NAPLPS databases don't use the full standard either. MVI works with these databases better than a full NAPLPS

package such as TeliGraph does, and Microstar promises to release a full NAPLPS package soon. (Meanwhile, Microtaura offers a stripped-down version of TeliGraph that works with databases better than its full package does.)

When you load MVI into your PC, you are given a choice of communications options, as well as a choice of either standard dumb terminal mode or "Telidon" (NAPLPS) mode. You can then dial the remote database and exchange account information with it as required. Once you are in communication with the database, you can retrieve pages of information according to the database prompts. MVI will decode the pages and display them on your color screen. Although the standard IBM color board limits your choice of colors to four, MVI can be used with the Colorplus board and will soon be compatible with the board's 16-color capacity.

Microstar also offers software developed by Indigo Data Systems for dumping your decoded pages to a printer. \$45 will buy a program that can be used with an

IBM dot matrix printer; \$50 will get you color if you have the IDS Prism color dot matrix printer. (The printer itself ranges in cost from \$1,299 to \$1,499.)

THERE ARE enhancements on the way for the NAPLPS standard, including ways to encode sound as well as graphics.

Microstar has also developed a monochrome version of its software that can be used with two different PC portable initiators, the Dynalogic Hyperion and the Compaq. Both of these computers have excellent, high-resolution monochrome screens, which do a creditable job of displaying NAPLPS pages.

Future Developments

There are enhancements on the way for the NAPLPS standard, including ways to encode sound as well as graphics, ways to encode near-photographic quality images, and "Picture Manipulation Instructions" that will allow you to perform special functions such as zooming in on parts of pictures. There's even more software on the way that will be able to create pictures. Since a graphics software producer can encode images using NAPLPS, there's no reason why you can't create NAPLPS images using a program rather than a page creation system. Microtaura is working on such a system now, and claims it will replace LOGO.

Canadian software is leading the way toward universal acceptance of NAPLPS. NAPLPS-based systems have been available to Canadians for several years, and experimental systems are now being used in a number of U.S. cities. NAPLPS promises to enhance graphics communications between computers, and ultimately, between nations as well. /PC

Charlie Chaplin's business acumen rivaled his creative genius. His image continues to pay off for his heirs—and for anyone who can afford to pay for the right to use it.

THAT'S WHY THE PC IS A TRAMP

The story of industry, of individual enterprise, humanity crusading in the pursuit of happiness.

From the titles, *Modern Times* (1935)

Not so very long ago, Billy Scudder (opposite page) had little use for a computer, let alone the double disk drive IBM beauty he now has stationed in his home. Until 2 years ago, he probably couldn't afford to buy one. Now, it's only fitting that Scudder have his own deluxe IBM PC. Why? Because he helped make the IBM PC famous. Or the PC made him famous.

At least it has made his interpretation of Charlie Chaplin famous. His Charlie is the one you see in ads for the IBM PC. It is

Billy Scudder's quirky though authentic impersonation of this century's greatest funny man, Charlie Chaplin, the personification of twentieth century pathos and determination, that has come to represent the latest profit center of the IBM conglomerate. This 5-foot, 6-inch actor, who once played Chaplin's Little Tramp 8 hours a day for tourists at the Knott's Berry Farm amusement park in southern California, represents a landmark product in the short history of personal computing—and potentially an entire industry of software and compatibles.

"They had been auditioning Chaplins in New York and Los Angeles," recalls Scudder. "It was a typical talent search

where word spreads and all the Chaplins come out of the woodwork. For my first audition, I came right from Knott's Berry Farm where I had been doing Chaplin all day. I've been working most of my life as a performer and supporting myself this way. I also sing and dance and write, but Charlie was one of the things that kept giving me money continually and I kept doing it. I kept wanting to be me, but people kept wanting me to be Charlie."

The creative team at Lord, Geller, Frederico and Einstein (LGFE) certainly liked Scudder's Chaplin. LGFE is the New York advertising agency hired by IBM to create an image for IBM's entry into the personal computer marketplace.

"They said it was my eyes that attracted them," said Scudder. "I don't look like Charlie. We are, about the same size, but my nose and mouth are very different. The eyes do it. I look vulnerable. That's the key to Chaplin," Scudder explained. "He did all those tricks and mischief, but he was still vulnerable."

IBM wanted vulnerability. Its marketing strategy was to take a collection of electronic chips and promote it in a friendly, useful, non-threatening package. It worked for Apple and Commodore; why not for the folks from Armonk, New York, who had long enjoyed if not encouraged the image of a powerful corporate giant with the code name Big Blue? If IBM was going to get a foot in the door of schools, households, and small businesses, it would have to strip off its white shirt and blue suit respectability and replace it with a dusty coat and a pair of baggy pants.

"He's like you or me," Scudder continued, referring to the master. "He is the essence of all of us. I have done most of the

clowns in history—from Pierrot to Harlequin—and none of them register as much as Charlie. People read Charlie and feel comfortable with him. He is as vulnerable as we all are in this great big world."

The Tramp In Modern Times

Forty-five years before IBM introduced the PC, calling it "a tool for modern times," Charlie Chaplin produced a contemporary statement of his own: an 85-minute film parody of industrialization that he wrote, starred in, scored, cast, directed, and produced.

In the mid-thirties, when Chaplin's opus, *Modern Times*, was made, he exerted absolute control over the expression of his talent. He would continue to exercise similar artistic authority throughout his life—and even afterward. By doing so, he took the Little Tramp, whom he first introduced to America in 1914, and created a universal classic. In the course of Chaplin's movie career, the Tramp appeared 70 times. Ironically, its last appearance was in *Modern Times*, though the dignified vagabond would live long after 1935 as a trademark that Chaplin shrewdly developed as a minor industry.

Modern Times itself was more than a film vehicle for Chaplin's newest wife, Paulette Goddard. It was his treatise on industrialization, a springboard for his increasingly public socialist sentiments—sentiments that would cause him to be hounded during the McCarthy era and that eventually forced him from his adopted country.

Given this background, it may seem odd that IBM, a great symbol of corporate America whose name is synonymous with the silent power of big business, would adopt such a potentially controversial symbol for its bid to share in the consumer's discretionary dollar. Such ironies are the stuff of PhD dissertations, not clever marketing. While erudite film buffs may enjoy exploring the implications, marketers understand that the Little Tramp has little to do with the real story of its creator. Like Bogie, Marilyn, and Elvis, the Little Tramp is an emblem—suitable for framing or silk-screening on everything from T-shirts to coffee mugs. Other dissertations might highlight further ironies, particularly the adoption of the Little Tramp as a micro-age mascot in view of Chaplin's cinematic slap at progress in *Modern Times*. To this, the computer contingent

can readily retort that *Modern Times* is not about industrialization, but human freedom. As many of the early PCs and commercials implied, the Personal Computer, like a 16-bit Moses, can help to set us free.

What would Chaplin have thought about the Personal Computer? Billy Scudder thinks he knows. "I think at first he would have been indifferent. That's how he would feel until he used one on one of his scripts. Then he would have said, 'Oh, yeah, this is great!' He would have used it a lot. He was one of those people who loved to manipulate. That was why he wrote, directed, and produced everything himself. He was a user of technology."

Roy and Bubbles

When Charlie Chaplin died, on Christmas Day 1977, his Little Tramp was not cast unprotected into the world of the public domain. A businessman as shrewd as Chaplin wouldn't allow such a thing to happen to such a dear and lucrative friend. In 1978, the copyrights to the Little Tramp and all of Chaplin's movies were

acquired by an enterprise known as Roy Export, based in Liechtenstein, a principality on the Rhine between Switzerland

I*T HAS
since become common
knowledge that it's not
nice to fool around with
Roy Export, or for that
matter, with its French
merchandising arm,
"Bubbles."*

and Austria, favored by many as an international tax haven. Although the nature of Roy Export's corporate structure and shareholders is not publicly known, it is generally surmised that the company represents the remaining members of the Chaplin clan.

Roy Export protects Charlie Chaplin's heirs and his public image with the power of some of the biggest legal guns throughout the world. From its public dealings, it is apparent that the company has a vested interest in protecting the Chaplin name and image for as long as possible, ensuring, of course, that the family gets a cut along the way.

In reporting Chaplin's obituary, the Columbia Broadcasting System used various film clips from the Chaplin film classics *The Gold Rush*, *The Kid*, *The Circus*, *City Lights*, *Modern Times*, and *The Great Dictator*. The network was slapped with a lawsuit that led to a court-ordered payment of over \$700,000 in fines. CBS argued that its right to report on newsworthy events shielded it from liability under the First Amendment. Roy Export said "hogwash" and collected its bundle after the lower court decision was upheld by the U.S. Court of Appeals.

It has since become common knowledge that it's not nice to fool around with Roy Export, or, for that matter, with its French merchandising arm, "Bubbles."

IBM went to Bubbles in 1981 to license the trademark of the Little Tramp for its PC campaign. For an undisclosed sum,

IBM gained exclusive rights to the trademark for personal computers and office products. Bubbles retained the right to review all Little Tramp advertisements or marketing material created for the PC campaign. The deal is renewable in the fall of each year, with IBM retaining the right of first refusal to continue the agreement. IBM has also licensed the title "Modern Times." According to Bubbles managing director Pam Pommier, there is a strong case for stating that even the Tramp's bowler and cane are covered under Bubbles' trademark.

Nevertheless, the success of the PC campaign and the product itself has spawned a legion of print and television imitators. In *PC Magazine*, Volume 1 Number 11, for example, 12 advertisements for software and product peripherals made either direct or indirect reference to the IBM Tramp campaign. References ranged from a mysterious Tramp-like arm in ads for IRMA to a casually placed bowler and cane. And the Tramp has appeared in television commercials for Wang, Radio Shack, and NEC.

What does Bubbles think about the fact that its Little Tramp is rapidly being adopted not only as the symbol of the IBM

PC, but as a symbol of a new industry? Ms. Pommier's response was evasive.

"You mean that is really going on?" she asked.

The Tramp Goes to Court

In the United States, it has been going on for some time. For example, consider the case of Otrona. Collier Buffington, the head of a Denver-based advertising agency, had devised a clever Chaplinesque

T*HE LITTLE
Tramp is rapidly being
adopted not only as the
symbol of the IBM PC,
but as a symbol of a
new industry.*

campaign for the portable (non-PC-compatible) Otrona Attaché computer. In the ad, a handsome mustachioed dude is walking down a flight of stairs, casually carrying the Otrona with one arm. Several steps behind, Charlie's Tramp is seen stumbling his way downward with a cane clenched between his teeth, trying to carry an IBM PC. "A little computer will set you free," says the slogan.

Buffington exploded in an industry trade newspaper, "The Charlie Chaplin character is recognizable and people who might not know a lot about computers still know what the character means ... besides, it also allows a little humor to be injected into the ad."

Not for long. After four insertions of one-third page ads in the *Wall Street Journal*, Otrona was summoned with a cease and desist order by lawyers representing Bubbles. "What upset them was that our Tramp was believable," Buffington, now director of product management at Otrona, asserts. "Besides, all the IBM executives were certainly reading the ad every day on their train ride to Armonk. You better believe they saw it."

On advice of counsel, Otrona curtailed its Tramp campaign, though there was some discussion that the trademark could be challenged in several states. Buffington

explained, "We are in the computer business, not in the lawsuit business. We made a choice. However, when I was contacted by the representative of the estate, I let them know what I thought. I told them that Charlie would roll over in his grave if he knew they were siding with IBM."

The legal challenge that Otrona's lawyers referred to is currently the topic of courtroom debate. It has long been understood that public figures have the right to collect a fee for any endorsement. After their deaths, however, that right becomes somewhat clouded.

In 1982, Alexander Cohen, the producer of the Broadway Marx Brothers revue *A Day in Hollywood, a Night in the Ukraine*, received a California state ruling that the hairs to Groucho, Harpo, and Chico had no rights to any of the show's proceeds. Reversing a lower court ruling, the judge stated that the brothers' schtick was not a commodity that could be passed on, thus protecting the rights of "creative persons to employ freely characters who are part of our common cultural heritage."

In an article in *Channels* magazine (March/April 1983), however, lawyer Tom Teicholz offered legal advice that such a lawsuit is not easy to win. A 1975

ruling on behalf of Hal Roach Studios against marketers exploiting the image of Laurel and Hardy without their permission—they own the rights—is often cited in royalty bouts. Meanwhile, Pam Pommer of Bubbles maintains that the fact that Chaplin exercised his trademark while still alive makes his case different. Still, Teicholz quoted Irwin Karp, counsel for the Author's League and the Dramatist's Guild, as saying that an actor's character passes into the public domain after his death. He explained, "Should we stop calling a Napoleon a Napoleon because his great-great grandchildren [reserve the] right of publicity?"

The Tramp Campaign

The IBM Personal Computer "House" ad (60 seconds) aired in 1981. The set is stark white with a giant cube dominating the frame, otherwise occupied only by Charlie, a white table, and a fully blossomed rose. During the course of the commercial, the box shrinks and unveils an IBM PC. It is the first commercial for the new product, the Tramp's first role. The announcer reads:

CIRCLE 315 ON READER SERVICE CARD

The very first computers seemed as big as houses and so mysterious that for most of us, the computer was behind a closed door. But IBM was thinking how to make the computer more useful, and as one good idea led to another, it began getting smaller, faster, less expensive, easier to use. IBM made its personal computer to help a person be more productive, to help a person be more creative, and those are good reasons for a person to feel good . . .

A large photo tacked over the manual typewriter in Tom Mabley's office at Lord, Geller, Frederico and Einstein, depicts an irritated Little Tramp and a bruiser with a grin who has just snatched his bowler and cane. The bruiser is Mabley, senior vice president of creative at LGFE and head of the team that devised the IBM/Tramp liaison. With the photo as evidence, Mabley undoubtedly is capable of loosening up, but apparently not for interviews. You don't loosen up about IBM in public and expect to represent it for long.

IBM, however, wanted a "loose" image for the PC. This was the reason the corporation went to LGFE, known on Madison Avenue as a "creative" shop run by "creative" types. It did not start out 15 years ago as such. LGFE is a wholly owned (though autonomous) subsidiary of J. Walter Thompson, the worldwide advertising

giant. LGFE is noted for its classy clients such as IBM, Steinway, Hennessy cognac, and The New Yorker magazine.

Mabley and the Tramp are still at work, having just completed a new summer TV ad (pending IBM approval at presstime) and having recently launched a PC-XT print campaign that features two roses (instead of one) and the slogan "Power to the Person." (Was Abbie Hoffman contacted for licensing rights?) Business Week predicts that IBM will spend \$13 million on Personal Computer advertising this year. Chances are excellent that the company will re-license the Tramp from Bubbles again this fall.

At the time Mabley moved to LGFE from J. Walter Thompson in February 1981, the PC was known only as "Acorn." The project had been introduced to the agency the month before, and IBM had already slated an August 1981 launch. Deadline pressure and much more was already in full gear.

"It was a landmark," Mabley explained, "it was the first personal computer offered by IBM. It needed advertising that would be worthy of the event. It also had to be distinguished from other products made by the company. Our creative teams went to work and there were lots of different responses. There was one campaign that employed the Muppets. And of course, we evaluated the use of a spokesman. A spokesman is a natural

IBM,
however, wanted a
"loose" image for the
PC.

thing you cover. But the environment at the time, in terms of competitive advertising, was chock-full of spokespeople . . . Cavett, Cosby. Some of them are very good and very charming and memorable. It was this that led to a different kind of spokesman . . . a silent one. We thought of Marcel Marceau. It was logical for this to bring us to Charlie."

Once Charlie was selected and approved, authenticity became the creative

DOUBLE the EXPANSION CAPACITY of your IBM PC:

- ☐ Brings system total to ten slots
- ☐ Six expansion slots plus power supply
- ☐ No special addressing, part of PC I/O bus
- ☐ Compatible with all PC expansion cards
- ☐ No noise—no fan

An expansion chassis is a must for anyone who needs to go behind the PC's minimum configuration. Simply plug the I-Bus Six-Pac Expansion Chassis into one slot of your PC—and you've doubled your expansion slots from five to a total of ten. There's no special addressing or software required. Cards plugged into the Six-Pac perform exactly as if they were in the main system unit.

And there's plenty of power, too, because chances are your PC will run out of power before it runs out of slots. The Six-Pac's 40W supply quietly powers its own slots, with negligible power drawn from the PC.

It's only \$695, including 18" shielded interface cable (or \$755 with a four-foot cable). Call us today for all the details.

call word of the ensuing campaign. The designers wanted everything to be true to Charlie. David Horowitz's music for the TV spots was written from Chaplin's own score sheets (Chaplin wrote the score for

makers begin to make the micro user feel like he just parked a V-8 sports car instead of a kiddy car in his driveway?

"I think friendliness is going to be with us for a while," said Mabley, but as with the development of any product, sophistication will come. You can draw the comparison with the automobile. Remember "How to Test Drive the IBM Personal Computer?" People will always be looking for a faster car, the better handling car, the combination of consumer benefits that add up to a consumer preference. The more time people spend with computers, the more sophisticated the image will get. Then you will start seeing chic and sophisticated. For now, it's friendly."

Will the Tramp himself evolve in the course of the campaign? Will he have his pants tailored and spiff up his cutaway coat? According to Mabley, IBM intends to stick with the traditional Tramp.

How has the campaign changed Mabley? If the PC is indeed a product that can help transform people's lives, how has the IBM computer affected the creative director? Mabley's reply referred to the typewriter he currently uses and upon which, most likely, the Tramp campaign was first developed: "The personal computer will probably affect my life more when I finally get one into this office." /PC

Modern Times). Billy Scudder received the nod because he was more than just a mimic; Tom Mabley called his attraction "intelligence." Meanwhile, Scudder was reminded throughout the shooting to "be Charlie." An early attempt to dress the Little Tramp in brown was countered by the actor's demand, "Charlie didn't wear brown." Though the agency maintains the rose was added for color and a symbol of creativity, Chaplin aficionados recognize it as a prop from City Lights.

"What surprises me most about all the other advertisements around, more than their references to the Tramp, is how the rose has been adopted as a symbol. There was nothing unusual about the flower. It probably had been used in business machine ads before. This is really the surprise," said Mabley.

The references to Modern Times as an anti-corporate statement come as no surprise. Everything was done to make this Charlie human, even including a kiss at the end of the "Bakery" commercial, noted by some as the first kiss ever to appear in an IBM spot. Besides, according to Mabley, "What Chaplin described was more than mechanization, but the frustration of mechanization. By bringing Charlie into real modern times, we were able to show how he is finally able to conquer that frustration. It is clear that technology is now on his side."

"On his side" means non-threatening, which in common computer parlance means "friendly." Why not chic, sophisticated, and sexy? When will computer

TECMAR

THE **POWER**
BEHIND THE PC

IN THE COMPLEX PRODUCT MARKET OF
IBM PC ENHANCEMENTS, NO ONE OFFERS:

- More complete IBM PC expandability
- More solutions to today's business and technical computing problems
- More assurance of future compatibility with the next generation of technology
- More product reliability

TECMAR IS THE SAFE DECISION FOR TOMORROW'S PRODUCTS

TECMAR THE ONLY NAME YOU'LL NEED TO KNOW

CIRCLE 494 ON READER SERVICE CARD

ComNet™ FROM TECMAR

NETWORKING

- Ethernet
- Electronic mail
- Device sharing
- No dedicated server required
- Operates with no floppy-based system
- Remote job execution
- File lock out
- Password protection
- Server back-up available

TELEPHONE SUPPORT

(available through modem board)

- Autodial - with extended telephone numbers
- Auto Redial
- Call Forwarding
- Length Of Call Indicator
- Directory Support - with unlimited number storage
- Message Support - either leave or obtain messages. Receive messages remotely
- This unit (with a handset) substitutes for a telephone

MODEM

- Gateway to networks
- Electronic mail
- Device sharing
- Remote job execution
- File lock out
- Password protection
- 300 to 1200 baud modems available
- Data in network can be obtained by decoding touch-tone sequence or through voice recognition prompt
- Respond to remote terminal
- Access dictating systems on network. Control them by touch-tone decoding
- Programs or calculator can be used remotely. The touch-tone keypad can be used to provide numeric input to programs or the calculator from a remote site (programs are loaded by decoding touch-tone sequences).

VOICE

- Voice mail
- Voice annotated text
- Voice messages

VOICE RECOGNITION

- Transparent keyboard. Speak instead of type
- Give commands over phone

SECRETARY \$1695¹

- Ethernet Link
- Ethernet Companion
- ComNet Software

EXECUTIVE \$2995¹

- Ethernet Link
- Ethernet Companion
- Modem (300 Baud)²
- Voice Recognition
- Microphone
- ComNet Software

ComNet

ComNet is designed to meet your total communication needs including computer to computer (networking), person-to-computer and person-to-person communication requirements for data and voice.

The network protocol employed is the industry standard high speed Ethernet which permits a number of IBM PC's to be linked together by ordinary thin coaxial cable. In addition to its own computer's power, a user has the availability of other devices which are also attached to the cable - such as various printers, plotters, large disks, etc.

All versions of ComNet include an Ethernet interface and conversion of voice into data and back again. This enables one to give and receive spoken messages from any location, as well as storing the message for later transcription. The SECRETARY is the basic system with these features.

¹With 1st MATE, 2nd MATE, or 3rd MATE in Station

²Option: 1200 Baud Modem

IMPROVE PRODUCTIVITY THROUGH TOTAL COMMUNICATIONS SUPPORT

DICTATING SYSTEM

- Control the PearlCorder X-02 or XR dictating system at local or remote stations through keyboard or foot pedal control or by telephone touch-tone decoding. Allows you to dictate to the "ComNet" system from any place in the world.

FOOT PEDAL SUPPORT

- Controls dictating system
- Controls response to voice recognition

SOFTWARE

- Time Management - alerts you to appointments at any station you are logged onto.
- Message Management - either electronic mail or voice.
- Clock/Calendar - either visual or audible
- Calculator - either visual or audible
- Voice Management - oversees voice mail, voice message and voice annotated text operations

These software packages can be operated through voice recognition (even over telephone) with voice output, through the telephone keypad with voice output or through the IBM PC keyboard

The MANAGER system adds a modem which can turn the PC into a telephone if a separate handset is added. The modem enables the MANAGER to receive unattended voice and data from any telephone in the world. The MANAGER can key in commands thru the decoding of the tones in the telephone keypad.

The EXECUTIVE is the most complete implementation of ComNet, adding computer recognition of spoken commands. An executive might phone the PC to leave or retrieve messages or request specific information. The PC, in a spoken voice, can request the user's access code (or respond to questions regarding which of several options is desired). The EXECUTIVE has the option of keying in answers or commands with the phone's tone dialing buttons, or simply speaking the answer or commands.

HARDWARE

ETHERNET LINK \$950

Permits communications between computers at extremely high speeds (10 Mbits per second). The transmission mode is through single video coaxial cable with easy-to-use BNC connectors.

ETHERNET COMPANION \$695

Performs the function of voice digitization and voice replay, dictation machine control and foot pedal control. Also contains interface for mouse.

MODEM 103 (300 Baud) \$295 212A (1200 Baud) \$695

- 103 (300 Baud) or 212A (300 or 1200 Baud)
- Pulse/tone automatic dialer
- Dual tone DTMF receiver (decodes touch tones)
- Auxiliary voice circuit
- Auxiliary, optically coupled, ring indicator output (capable of being used for auto power-on)
- Can replace telephone with the addition of a handset

VOICE RECOGNITION \$995 MICROPHONE \$170

User-dependent 100 word recognition (200 words optional) with 98% accuracy. Permits computer to respond to voice input.

FIRST FROM TECMAR

\$319⁰⁰

Two 64 KILOBYTE MEMORY KITS will upgrade your 128K PC to 256K.

\$295⁰⁰

1st MATE™

**\$319/Unpopulated Memory
\$389/64K \$469/128K
\$539/192K \$589/256K
TECMAR'S TOP OF THE LINE
MULTI-FUNCTION BOARD**

Performs eight (8) key functions in one (1) expansion slot with upgradeable (expandable) memory.

- 0 to 256K Memory - fully socketed for easy field upgrade
- Versatile - each 64K fully addressable
- CLOCK/CALENDAR - with easily replaceable battery for back-up
- SERIAL PORT for communications - PC compatible (COM1, COM2 or other)
- PARALLEL PORT for printer - PC compatible (LPT1, LPT2 or other)
- RAM SPOOLER - easy to use - allows printing to become background task - choice of 8 memory sizes
- SPEED DISK - simulates ultra high speed disk
- AUTO-TIME - provides automatic insertion of date & time at power on
- Accepts exclusive PAL Option to restrict certain information on a "need to know" basis or to protect software
- Includes all connectors and cables
- Compatible with COMPAQ personal computer

**64 KILOBYTE
MEMORY KITS \$85
USE TO UPGRADE THE
PC XT SYSTEM BOARD OR
PC-MATE 1st MATE**

2nd MATE™ \$295

A wide range of I/O options - 4 ports with a clock/calendar when memory is not necessary

- Two (2) SERIAL PORTS for communications, quality printers, modems - PC compatible (COM1, COM2 or other)
- Two (2) PARALLEL PORTS for printers - PC compatible (LPT1, LPT2 or other)
- CLOCK/CALENDAR with easily replaceable battery for back-up
- Accepts exclusive PAL Option to restrict information on a "need to know" basis or to protect software
- Two (2) cables - one (1) serial, one (1) parallel - Included
- Compatible with T1 Professional and COMPAQ personal computers

PC MATES™ - A COMPLETE SERIES OF MULTI-FUNCTION MEMORY/COMMUNICATIONS BOARDS THAT GIVE YOU TOTAL VERSATILITY TO CONFIGURE YOUR SYSTEM.

3rd MATE™ \$445 ON-BOARD MODEM AND I/O OPTIONS

Pulse-dialing supported with no external cables or wiring. All you need is a phone jack.

- **MODEM** - 300 Baud, Bell 103, auto-dial, pulse-dialing supported, on board
- **SERIAL PORT** - for additional communications - PC compatible (COM1, COM2 or other)
- Two (2) **PARALLEL PORTS** for printers - PC compatible (LPT1, LPT2 or other)
- **CLOCK/CALENDAR** with easily replaceable battery for back-up
- Designed to accept exclusive **PAL** Option to restrict certain information on a "need to know" basis or to protect software
- Two (2) cables - one (1) serial, one (1) parallel - included
- Compatible with TI Professional and COMPAQ personal computers

NEW!

\$445⁰⁰

Scribe Tender™ \$195

Combines three (3) IBM options on one (1) multi-function board

- Two (2) asynchronous **SERIAL PORTS** identical to IBM ports, (COM1, COM2 or other) fully programmable
- Complete status reporting
- One (1) **PARALLEL PORT** emulates IBM printer adapter board, (LPT1) including software capability
- Compatible with TI Professional and COMPAQ personal computers

\$195⁰⁰

Triporter™ \$95

Designed to provide easy access to the connectors on multi-function boards, such as the Tecmar Scribe Tender, 1st MATE, 2nd MATE, 3rd MATE. Provides for mounting of up to four (4) male or female DB25 connectors on back of IBM PC or Tecmar Expansion Chassis slot. (Cables \$25 extra)

- Easy to install
- Accommodates 26 conductor cables
- Mounts in expansion slot opening
- Housed in steel case

\$95⁰⁰

TECMAR'S AFFORDABLE INDUSTRIAL/SCIENTIFIC LINE FOR THE IBM PC

CONFIDENCE IS NO EXTRA CHARGE.

COMPATIBLE

All TECMAR products are designed to be fully compatible with each other and the IBM PC for smooth, trouble-free performance in your system.

SUPPORTABLE

Our philosophy of total support adds uncommon value to your TECMAR products. All TECMAR boards feature a one-year warranty, with guaranteed 72-hour maximum repair turnaround on all standard products. Replacement loaner units are available. Thorough and straightforward documentation comes with each unit. Our customer service staff is available to answer questions or solve your problems.

EXPANDABLE

Our products allow easy expandability, so your system capabilities can grow with your needs.

There's more! TECMAR's broad line of compatible IBM PC Industrial/Scientific products includes:

- High Resolution Graphics
- 5 $\frac{1}{4}$ " and 8" Floppy Disc Controller
- Video Digitizer
- Video Cassette Recorder Controller
- Speech Synthesizer
- Voice Recognition
- D/A Converter
- Stepper Motor Controller
- EPROM or EEPROM Programmer/Reader
- Static RAM/ROM
- CMOS Memory

**IEEE488 INTERFACE
plus SOFTWARE**

**\$395
\$95**

Board implements IEEE488 industry standard to enable PC to operate as system controller or as an addressed talker/listener. Has DMA and interrupt capabilities. Available library of machine-language subroutines called from BASIC or FORTRAN for data transactions with GPIB. Order #20030 INTERFACE, #30030 SOFTWARE.

LAB MASTER™

\$995

A sophisticated system that includes 16 channels of 12-bit A/D with a 30KHz conversion rate, two channels of 12-bit D/A, five timer/counters, and three 8-bit parallel ports. Options include programmable gain up to 1000, 14- and 16-bit accuracy, 40 and 100 KHz conversion, up to 256 channels. Order #20009.

LAB TENDER™

\$495

An economical and versatile system designed for data acquisition and control applications, with 32 channels of 12-bit A/D conversion, 16 channels of 8-bit D/A conversion, five timers, and three 8-bit parallel ports. Order #20028.

BASE BOARD™

\$345

Digital Input/Digital Output board with four sections of 24 DI/DO lines. Each section can be used as a stand-alone DI/DO interface or with a daughter board for prototyping or specific functions such as opto-isolated input or opto-isolated output. Order #20025.

We are proud to offer the largest line of options available anywhere for the IBM Personal Computer. All Tecmar products are designed with advanced technology as it becomes available. We add new products monthly like the PC-MATE removable Cartridge Winchester drive. TECMAR offers complete reliability and backs it up with support.

PC MATE™

SOLUTION-ORIENTED DESIGN WITH THE USER IN MIND A FULL LINE OF PROBLEM SOLVERS

**DIGITAL TO ANALOG AND
DIGITAL INPUT/OUTPUT
(DADIO) \$395**

This accurate, high-speed unit has two (2) independent channels of 12-bit digital-to-analog conversion that can be double-buffered (all four (4) output channels change simultaneously), with timer (2) 8-bit parallel ports. Can connect up to 24 digital devices.

SPEECH MASTER \$395

For any application where verbal responses has proven most effective. Uses the VOTRAX phoneme-level speech synthesizer for unlimited vocabulary, and the NATIONAL vocabulary-level synthesizer, for speech synthesis of high-quality with varied vocabulary. Features an on-board speaker with provision for external speaker or amplifier.

**VIDEO VAN GOGH \$345
plus SOFTWARE \$95**

A video digitizer that interfaces TV cameras to the PC. Will digitize a black and white picture in six (6) seconds with resolution of 256H by 192V pixels and 256 grey levels. Software library sub-routines allow operation and display of a video picture, transfer to disk storage, image-painting, cursor control and point digitization.

**DEVICE MASTER \$245
plus SOFTWARE \$35**

Can be used for energy management, security, or just for convenience. This interface for the BSR X-10 unit turns electrical outlets on or off and dims lights without additional wiring. It uses its direct AC connection, avoiding damage to the computer. Contains a clock/calendar with alarm and battery back-up.

**VIDEO CASSETTE RECORDER
CONTROLLER \$495**

Controls all remote functions on the SONY CC2500. Codes each frame so the user can locate any particular scene on the video tape, adds frame number information to any length recording, retrieves and displays exact frame by frame number, and when used with TECMAR'S GRAPHICS MASTER, a computer display can be super-imposed on the video picture.

**STEPPER MOTOR
CONTROLLER \$495**

A motor controller that gives you intelligent control of one (1) or two (2) stepper motors through the IBM PC. We control four-phase or pulse encoded motors and has two (2) independent, buffered and labeled 8-bit TTL input ports and two (2) independent, buffered and labeled 8-bit TTL output ports.

**E+EEPROM PROGRAMMER/
READER \$495
E+EEPROM EXPANSION \$595
E+EEPROM SOFTWARE \$95**

You can program and read EPROMs or EEPROMs with this unit. The expansion system allows for more sockets for individual or batch programming. The software is conveniently menu-driven routines that enable the user to acquire, verify and manipulate data to program EPROMs or EEPROMs. Error correction and global sub-routines are included.

TIME MASTER \$135

A clock/calendar with five (5)-year battery back-up and software auto-time function that automatically inserts date and time at "power-on". With added memory, this unit will turn the computer on, perform a function, and then turn itself off.

Drawing from classical myths, detective fiction, and wild imaginations, adventure game authors are leading players into selcouth territory.

In Search Of The Exotic: New Directions In Adventure Games

Adventure, Microsoft's version of the original granddaddy of the adventure game genre (and the first game of any kind offered for the IBM PC when it was introduced nearly 2 years ago), put me in a state of high dudgeon. Who the hell cared about finding a stupid magic rod and waving it to make a bridge magically appear across the crystal fissure? Maybe it would have been a lot more fun to, say, lure the fierce green snake to the edge of the fissure, throw your keys in the snake's eye, bop it over the head with your lantern, wait for rigor mortis to set in, and then use its body as a causeway. (Don't snicker, this is as logical as waving wands or muttering "xyzy.") Or perhaps it might have been interesting to shinny down into the fissure just to see what the Colossal Cave rock formations were like. Maybe even have a picnic and invite the dwarfs to slice the sala-

mi with their wretched little axes!

In your basic old-style adventure game, of course, attempts to pull off anything unorthodox are usually rewarded with the computer's ultimate circuits-glazed-over

WHO THE HELL
*cared about finding a
stupid magic rod.*

snub: "I don't understand that word." This tends not to perturb those souls for whom the world in the game is mere window-dressing for the real action: the thrill of hunting down the single correct piece of the puzzle. For me—and, I suspect, for a

lot of other folks who aren't math-whiz programmer types—the puzzle is incidental. My idea of a terrific adventure game, in fact, is one that's most like that perennial linear entertainment form, the novel. You know: plot and characterization, vibrant dialogue, vivid descriptive passages, witty asides, and, above all, a world as compellingly real as L. Frank Baum's Oz, Sir Arthur Conan Doyle's Baker Street, Mark Twain's Missouri, or George Eliot's Middlemarch. Microsoft's Adventure, alas, is about as literary as IBM's Guide to Operations.

More Than Adventure

I recently revisited the adventure genre, however, and while I'm not about to burn my books or rip up my membership in the International Wizard of Oz Society, I have to confess that I'm feeling a

How to Save Money on Your IBM Purchase

Buy the IBM PC from your local dealer. Get the 1-Drive System, the DOS, and the Monitor adaptor. Then order any of these items from us and **SAVE** up to **\$800.00** on fully compatible, high quality components. In many cases, we use the same brand equipment that IBM sells for as much as twice the price!

PRODUCT	BRAND	SUGG. RETAIL	OUR PRICE

little less curmudgeonly. Adventure games are evolving from a hacker's addiction into what can sometimes be an English major's delight.

One newish trend is adventure games

ADVENTURE games are evolving into what can sometimes be an English major's delight.

with color graphics; another up-and-coming trend (at least for the PC; it's old hat for Apple owners) is the multi-disk game. Still another is the trend to reach beyond the caves-and-graves imagery of the earlier games and borrow from other literary traditions, such as science fiction, mysteries, or classics.

All these features are apparent in Sieradventure's *Ulysses* and the *Golden Fleece*, the world's first double-disk, hires Greek myth. As the game's manual (printed on fake ancient parchment) notes, "knowing a bit of mythology and the Classics—a familiarity with *Ulysses'* adventures—also will help you survive."

If you do know a bit of mythology, but don't remember Homer's mention of Colossal Island, don't be put off; the game is fun. It is an eighties version of the classics comics that so appalled my teachers when I was a kid. (What's next? "Close Encounters with Scylla and Charybdis"?)

Other happy trends include snazzier locales and just plain better writing. Norrell Dete System's *The Phantom's Revenge* begins in a prison cell; in the first 5 minutes of play, the average adventurer staggers into a creepy old opera house with ghouls on the staircase, a low-life waterfront dive frequented by "big burly men in black shirts, fallen women, and computer freaks of all sorts," an island that sounds like something out of *The Count of Monte Cristo*, and a formal garden. "While you're here," the script reads, "please admire the rhododendrons." The computer won't let you pass until you do. Then it smugly agrees: "Lovely, absolutely lovely!"

Confronting the Creator

If there's a software company that deserves the title of the thinking man's (or woman's) adventure writers, it's Infocom of Cambridge, Massachusetts. One of the best presents any PC owner got for Christmas last year was Infocom's *Deadline*, in which the user plays a frazzled detective

assigned to solve the death of one Charles Robner. Unlike most earlier games, *Deadline* allows players to communicate in (gasp!) English sentences ("Mrs. Robner, tell me about your husband.") rather than in two-word troglodyte baby talk ("give cage," "go building," "Me User, You Machine"). As in real life, time passes in

Deadline, and things can go on behind your back. What the characters say and do are very much a function of how you behave. The characters—family and friends of the late Mr. Robner, all assembled in his rambling estate on the day his will is to be read—have distinct personalities in the best Agatha Christie tradition,

and the game has 25 possible endings.

Best of all, though, is Deadline's wealth of delicious tiny details, things that make it more like playing with a wonderful dollhouse or a model train set than a verbal mind-teaser. When you flush the toilets in the Robner mansion, they oblige with a "Whooooosshhhhh!" Pick up the

Suspended, an interactive science fiction game from Intercom, features a functional game board and movable game pieces. The package is embellished with a face frozen in time—a cryogenic face.

telephone and you'll hear a dial tone. If you look in the gilt mirror in the master bedroom, "a bedraggled and weary police inspector looks back at you. His look seems to be saying, 'Look what the cat dragged in.'" Ruffle through the dresser and you'll find not clues but stockings and underwear. You can even jump off the balcony if the spirit moves you, in which case, you "die," but not before experiencing an exhilarating sense of free-fall, as if the ground were rushing up to meet you.

Marc Blank is InfoCom's vice president for product development. If you're used to sales people hyping software that you wouldn't feed to a goat, you'll find Blank unique; he trashes his good software. Actually, Blank seems to despise every game that is more than 20 minutes old.

At the moment, Blank is high on an about-to-be-released thirties Hollywood private eye game called Witness, which, he insists, "makes Deadline look like garbage." Blank nearly swoons as he explains that the newspaper included as a prop is a copy of a real paper, and that the radio show the characters listen to is one that was actually on the air in Los Angeles.

Blank has to be coaxed into admitting that Deadline, if "rough" compared to Witness, was still a breakthrough. He concedes, for example, that he's a little partial

to the book that lies on the library table, which, if you pick up, turns out to be a novelized version of Deadline. (No, you can't read the ending; the programmers are way ahead of you.) "We're very committed to the art form of interactive stories," he says. "More and more, we're really in the business of simulating the world."

WE'RE IN THE business of simulating the world.

Games to Come

In the future, Blank imagines games based on currently unimaginable themes. "Maybe it would be fun to play a game where you're a jerk who makes all the wrong career moves." Other plans are to have games written by famous authors (another new Infocom game, *Suspended*, is by Michael Berlyn, a published science fiction writer), more adaptations (Infocom is working on a game based on the character of Tom Swift), and eventually, games that integrate the microcomputer with interactive video disks. "My favorite thing," Blank says dreamily, "is when I hear people say that they used to come home at night and watch TV... who now come home and play adventure games."

The first three Infocom games—*Zork* versions I, II, and III—are all essentially plotless puzzles in the standard adventure mold. The original *Zork* was written in the mid seventies at the Lab for Computer Science at MIT, the same place where the original *Adventure* was written. *Adventure* was programmed in FORTRAN and *Zork* in the LISP-like language MDL. According to Blank, *Zork* was part homage to *Adventure* and part an attempt to do the same thing faster. Blank refers to another Infocom game, the science fictional *Starcross*, as "essentially *Zorks* in Space."

The just-released *Suspended* is a little more like *Deadline*, although it's also so weird that it's like virtually nothing else this side of "The Twilight Zone." Packaged in a chalk-white, life-sized death's-head-type mask with eye holes (a party prop guaranteed to thrill all the practical

jokers in your life), the game is subtitled: "A Cryogenic Nightmare." You, the user, have been selected to be put in suspended animation for 500 years while your mind directs a squad of robots who live in an elaborate underground labyrinth and supervise the food, weather, and transport systems on the surface of the planet. All

the robots have distinct talents and personalities, of course. One spouts Shakespeare, another flirts outrageously. Your job is to manage them effectively or be replaced by one of your own clones. This mélange of administrative crisis management and high-tech, backstabbing doppelgängers adds up to a sort of "What Makes

WORD PROCESSING FOR IBM PC...NEC APC...AND OTHERS USING CP/M-86* OR PC-DOS*

DATATEXT™ SOFTWARE FROM DATATEK WITH dBASE II INTERFACE.

DATATEXT™, a powerful word processing software system, can enhance your microcomputer with the capabilities of a dedicated word processor. You can even automatically merge dBASE II (Ashton-Tate) data files with DATATEXT™ documents.

Simultaneous editing and printing of files helps increase operator productivity, while true proportional spacing gives your documents a well balanced appearance.

With in-process help screens and operator prompting available at all times, DATATEXT™ is a breeze to learn and master. A simple-to-understand tutorial manual, written with the first-time user in mind, guides you through the steps that will lead to professional, crisp, clean documents.

And...with our customer support services program, you can call us at our toll-free number and talk directly to one of our technical experts, they'll be glad to answer any questions you may have regarding DATATEXT™.

The DATATEXT™ tutorial manual, along with a demonstration diskette (which may be converted to a full working copy by Datatek) is available to prospective users, dealers, and distributors. For additional information, fill out the coupon below, or phone (800) 237-5014.

Sammy Interface?" It's nerve-wracking, but never dull.

I was never able to figure out what the ultimate goal of the game was (I kept getting replaced by my clone in what has to be one of the spookiest adventure-game scenes ever written), but apparently there are even more rarefied subsets within for

those who are already adept at the arcana of managerial robotics.

One command, "configure," allows you to change certain elements of the game in order to challenge others. Another nice touch for players of all levels is a map of the complex, supplied with little stick-on buttons representing all the robots.

To successfully complete Infocom's science fiction game *Starcross*, players will need to utilize the four-color starchart. The game is packaged in a flying-saucer-shaped package.

Merge Color Graphics with Color Word Processing on the PRISM Printer

Communicate your ideas as never before possible with Rainbow Writer™ color graphics and word processing enhancement software. Because professionals need professional tools your printer can be anything you want it to be. Easily merge color graphics and color text to open a whole new spectrum of communications and work recognition. With over 60 Plain English style commands, anyone can quickly change the format or adjust the features of the printer anywhere in a letter, form or document without restrictions. Achieve typeset capabilities previously available only through offset printing, with intercharacter proportional spacing, justified right and left margins, variable character size and density and much more. All programs have been designed exclusively to access the full power of the PC.

Zorkaholics

Despite such high-class goodies, Marc Blank says that most of his customers are Zork nuts. (Blank, naturally, loathes the original primitive Zork, which is the best-selling game of all.) So fanatic are these people, in fact, that some 15,000 have joined the "Zork Users Group" (ZUG). They shell out hard-earned money for such items as maps, clues (written in invisible ink in incrementally broader hints, so that you needn't reveal more than necessary)—even T-shirts and a newsletter called (what else?) *The New Zork Times*. Beer wars are threatened.

Who are these people? According to ZUG chief Mika Dornbrook, they come from as far away as Australia, Italy, and Hungary, and they "are the kind of people who, when they're struck, feel desperate." (Contrast this with Blank's description of many Deadline players, who "just hang around the Robner's house," snooping in the linen closet and such.) The one reader survey Dornbrook undertook provided "maybe not so much a cross section of Zork players as of the kind of people who tend to buy computers: young professionals, 20 to 40, mostly men, and a lot of computer programmers." What was less predictable to Dornbrook was the amount of time people spent in the underground empire—often 4 hours at a sitting. The average length of time to solve a game is 40 hours.

Dornbrook and Blank were actually old friends and lab partners from college. Blank was originally a medical student, and Dornbrook a "drifting" biology type. Unlike most of Blank's other friends, Dornbrook knew nothing about computer games—to this day he's never once put a quarter in an arcade slot—and when

Blank was beta-testing the Zorks, he called on his old friend to come give him an unbiased perspective. "They originally paid me \$6 an hour," Dornbrook says. "I fell in love with the games, but I didn't tell them, because I thought they wouldn't pay me anymore."

As the games began to sell, people from all over the world were starting to call the MIT Lab for Computer Science and ask anyone who answered the phone how to get past the troll. With Blank's blessing, Dornbrook, who was moving to Chicago to go to business school, started an independent hint service that eventually grew into ZUG. "People still call MIT trying to find out how to get past the troll," according to Dornbrook.

Meanwhile, the ranks of adventurers grow, be they manic puzzle-solvers or people like me, who like to look under the Robbers' beds just for the hell of it. ("No doubt you intended to find the bogyman, but you're out of luck.")

Aural Gratification

Your IBM Personal Computer is undeniably a well balanced system. However, in one respect it may, so to speak, be functionally deficient. This condition can now be easily remedied. With Street Electronic's ECHO-PC speech synthesizer, your IBM Personal Computer can have unlimited vocabulary.

Speech is a valuable enhancement to many computer functions: educational and training programs, warning and monitoring devices, assisting the handicapped, phone answering, and numerous business applications. With the Echo's text-to-speech firmware, adding speech to a system is achieved simply by adding a print statement to those words, phrases, and sentences to be spoken.

The ECHO-PC plug-in board is a complete, independent speech synthesizer with an on-board Rockwell 6511 microprocessor, its own on-board speaker, and text-to-speech firmware. Several demonstration and utility programs on diskette and a tutorial-style manual are also provided. In addition to the unlimited vocabulary text-to-speech system, over six hundred natural sounding words are available on diskette to be implemented into user-designed programs.

The ECHO-PC is a very simple, easy to use peripheral that will give your IBM Personal computer a whole new well-adjusted personality. Its overall quality and pricing cannot be found elsewhere.

The ECHO-PC is sensibly priced at \$225.00. A special discount program is available to all schools and those institutions assisting the handicapped. Please inquire about our complete line of speech products available for most other computers.

CIRCLE 418 ON READER SERVICE CARD

In the battle for the Communications Belt, PC-Talk III, the West Coast "People's Choice," holds its own against Smartcom II, the "Menu Kid" from Georgia.

Remote Possibilities: The Latest Line On The Heavy-Baud Bout

Welcome to the "Tough Camm" match, where two of the biggest names in communications software will slug it out micro to micro at 1200 baud. In this corner—in the white disk trunks, fresh from California, flexing all the new muscle it's gained since last we saw it—is PC-Talk—now fighting under the monicker of PC-Talk III. PeeCee's gained the nickname "People's Choice," and it's not hard to see why. What other pugilist gives away tickets to the fight and tells fans to pay 35 bucks or whatever they can afford afterward—but only if they enjoy themselves?

In the far corner—in gray trunks with a rainbow-colored "Hayes" splashed all over them—a brand-new entry in the telephone ring. But it's one with a hefty car-porote backer—Smartcom II, hailing from Narcross, Georgia. Known as "The Menu Kid," Smarty is as haughty as they come. Disdaining equipment it considers be-

neath its high intellectual plane, The Kid refuses to work with any but the Hayes Smartmodem. Still, it's a tough competitor, and its fans have paid up to 119 smackers each to watch it do its stuff.

Gentleware, break non-ASCII clean, came out dialing, and may the best disk win!

PC-Talk III

The Headlands Press, Inc.
P.O. Box 862
Tiburon, CA 94920

List price: \$35 (also available as Freeware; see article)

Requires: 64K, PC-DOS, one disk drive, asynchronous communications adapter, modem.

In its earlier versions, PC-Talk showed it had the moves. A scrappy competitor, it quickly became the darling of PC commu-

nicators everywhere. Written in BASIC, it uncomplicatedly let you modify it for specific needs. Well designed, it kindly offered a bendy on-screen summary of commands. Literate and chivalrous, it came with pages and pages of useful doc-

PC-TALK WORKED with just about any modem around.

umentation right on the disk end gave you a routine to help print it out.

PC-Talk worked with just about any modem around. It could transmit and receive disk files and route information to a printer. It could store a directory of commonly used telephone numbers (including such long-distance services as Sprint and MCI) and make an auto-dial modem call them. It let you assign character strings to the Alt-numeric keys as well as the unshifted function keys. It was even able to tell you how long you'd been on the phone during your current call.

But if you weren't convinced of its talents, you could put the gloves on and go ten rounds with it. Under the Freeware program, PC-Talk's author Andrew Fluegelman actually encouraged people to copy the program. You tried it and found out for yourself whether it was a contender or a ringer. You were encouraged to send Headlands Press 25 bucks if you liked it. If not, you could pass the disk on or copy it for a rematch with somebody else.

PC-Talk drew quite a few described it quite a few bucks. Users described its attraction succinctly: "It's cheap [or, among the less scrupulous, free], it works, and it does everything I need."

Now PC-Talk III is being offered under the Freeware program. The current suggested contribution is 35 simoleons, which is still cheap. PC-Talk III does virtually everything its predecessors did. But it also has some swift new moves that make it a tougher competitor than ever.

New Muscles

The old versions of PC-Talk ran from interpreted BASIC and fit into 64K of

memory. With PC-Talk III you get two editions: a 64K version much like the old one, and a compiled high-performance model that needs 126K of memory. The program will run from PC-DOS 2.0, but extra memory will be needed, at least for the interpreted version.

Both models operate at speeds up to 1200 baud, but certain things happen faster in the compiled edition. The old version's "fast" mode, which caused some annoying screen handling, has been totally eliminated from both new editions. Users tooling along in the 1200-baud fast lane will notice a definite improvement.

There's more that's new. Alt-C now clears the screen. Alt-W gives you a sort of "typewriter" feature—a beep that warns you when the width of a typed-in line has exceeded a preset limit. The Alt-D dialing directory has been expanded to make room for 60 entries. Alt-Q will make a Hayes Smartmodem redial a busy phone automatically until it establishes a connection. And Ctrl-End will send out something called a "sustained break"—a non-ASCII signal (not to be confused with Ctrl-C or anything else) that some systems want to see. But that, as they say, is just Round One.

Keys to Success

The ten function keys are now available in all four of their modes—unshifted, upshifted, Ctrl, and Alt. Each of these 40 keys may be assigned a string of up to 126 characters that's saved in a disk file so it doesn't disappear between sessions. The first 30 characters of each string are displayed in a directory that appears when you type Alt-K; at this point you can modify or cancel any of the current assignments. It's an extremely handy feature for log-on sequences and the like.

You also get ten keys (Alt-0 through Alt-9) to which you can assign temporary strings of up to 50 characters each. These can't be stored; you reassign them each time you use the program. The first seven characters assigned to each string are displayed on the bottom line of the screen in familiar BASIC format.

(Memo to ProKey users: it would probably be wise to quit that program before entering this one. ProKey's priority over the various Alt-shifted end function keys could cause problems. Besides, PC-Talk III uses Alt= to reassign the Alt-numeric keys, and this important ProKey com-

mand could cause more confusion.)

Old PC-Talk hands will recognize that the roles of the function keys and Alt-numeric keys have been switched around from previous versions. A couple of neat things from older versions have been eliminated. PC-Talk III no longer has special keys for dialing The Source and CompuServe, nor does it assign special functions to the End, Ins, and Del keys when using these services. With all the extra function keys available now, it's hard to complain. I suspect someone who desperately wanted to keep the old key assignments could do a little playing with the BASIC source code. The interpreted version is still listable. In fact, the program comes with a separate ASCII file of remarks that you can merge into it if you're serious about fiddling around.

The PC-Talk III Files

The big news with PC-Talk III is its file handling. Sey you're noodling along on CompuServe's CB simulator and some incredible mot just appears on the screen—a comment so pithy you just have to save it for posterity. Quickly hit Alt-S, and you will dump the contents of the screen to a special file called SCRNDUMP.PCT. Every time you do this, you will append the latest screencful of information to that file—a very slick move indeed for those occasions when something else important turns up on the screen and you're caught with your disk

OLD PC-TALK
hands will recognize

numeric keys have been
switched around from
previous versions.

drives down.

Other new stuff has been added to the file handling process. The PgUp and PgDn keys, logically enough, will now upload and download files—but if you don't like

NEW FROM APSTEK PIC-1 THE PRINTER INTERFACE AND CLOCK CARD FOR YOUR IBM PC AND PC-XT

ONLY

\$149.

PIC-1

A simple answer for completing your IBM Personal Computer. Small... fits the short slot in the IBM PC-XT. Printer Port may be configured as LPT1; or LPT3;. Printer interrupt level is selectable. Our clock features a long-life easily replaced lithium battery for maintaining time and date when system power is off. Clock software is included.

- PARALLEL PRINTER PORT
- CLOCK/CALENDAR with time/date set software
- FULL 1-YEAR WARRANTY
- FITS SMALL SLOT IN IBM PC-XT

AIC-256...ALL YOU'LL EVER WANT ON A SINGLE CARD FOR YOUR IBM PC OR PC-XT

- **64K - 256K MEMORY**...a proven, reliable design with parity checking. Addressable on any 64K boundary. Simple expansion in 64K increments (no special components required...only RAM chips).
- **ASYNCHRONOUS COMMUNICATIONS PORT (RS232)**...may be configured as COM1; or COM2;. Selectable interrupt level. Supplied with bracket-mounted 9-pin connector and 6 ft. external connecting cable for full RS232 and IBM PC compatibility.
- **PARALLEL PRINTER PORT**...may be configured as LPT1; LPT2; or LPT3;. Selectable interrupt level. Bracket-mounted standard DB25S connector, identical to that used by IBM.
- **CLOCK/CALENDAR**...with reliable long-life lithium battery for maintaining time and date when system power is off. Includes time and date-set software.
- **6 ft. EXTERNAL RS232 CABLE INCLUDED. NO INTERNAL CABLING IS USED.**
- **INCLUDES:** electronic disk, print spooler and diagnostics software.
- **FULL 1-YEAR WARRANTY**

AIC-256 MULTI-FUNCTION CARD

AIC-256-01 with 64K	\$369.
AIC-256-02 with 128K	439.
AIC-256-03 with 192K	509.
AIC-256-04 with 256K	579.

Ahead in industry compatibility.

Today, the Columbia VP portable takes on hundreds of IBM-PC compatible software programs and IBM-PC add-ons or peripherals.

What's more, six other Columbia-supported operating systems are available — CP/M-80, CP/M-86, (Concurrent CP/M-86, OASIS-16* and XENIX* available soon) — stretching the Columbia VP's software compatibility beyond any other personal computer you can buy.

Get started with thousands of dollars worth of software FREE.

Every Columbia VP portable is shipped with fully supported software that will save you thousands of dollars on your initial purchase. That means your Columbia is up

and running right out of the box.

Included is:

Perfect Writer™	Perfect Speller™
Perfect Filer™	Perfect Calc™
MS-DOS*, with	BASIC™
RAM disk	Asynchronous Com-
Macro/86 Assembler	munications Support
MS-BASIC™	Columbia Tutor
Macros/86 Assembler	Home Accountant
Diagnostics	Plus
Space Commanders™	CP/M-86*
Fast Graphs	

Full feature performance at an affordable price.

The Columbia VP portable features an 8088 16-bit CPU, 128K RAM, (additional 128K, optional). 640K in dual disk drives, one IBM-PC compatible expansion slot, one serial and one parallel I/O, IBM-PC-compatible keyboard, and a 9" built-in monitor with graphics.

The best news of all is the price: \$2,995—including software. And

the Columbia is built with lasting value in mind. Rugged single board design plus the flexibility to expand and personalize your Columbia VP.

Made in U.S.A.—supported worldwide.

All Columbia hardware and software are backed by our dealers and distributors worldwide with national service provided by Bell & Howell. Call for the name of the dealer in your area. Let us show you a whole new world of performance and value.

HBSoftware

for Your IBM Personal Computer

HBSort is the stand-alone direct file sort with a money-back performance guarantee - it creates a new disk file with your records sorted the way you need them. (\$85)

- Sort 750 mailing labels in 4 minutes, 2000 accounting transactions in 7 minutes, a full floppy disk in 10 minutes.

HBSnoop lets you see exactly what is in your direct disk files. (\$45)

- Print just the records you want to look at - selected fields or whole records.

PS - The People Sorter is an easy-to-use address book system that quickly prints mailing labels, listings, and updates for your address book. (\$135)

- An alphabetic directory lets you find and update entries in just 3 seconds, even when you have a full disk of people and companies.
- Powerful selection features let you organize and manage your mailing and telephoning lists. You can select by special interests, geographic data, and more.

Script is the easiest-to-use word processor on the market today. A combination of easy-to-use menus and easy-to-remember commands like INPUT, VIEW, EDIT, SEARCH, and PRINT make word processing easy. (\$190)

- The keys on your IBM keyboard work the way you expect them to work, eliminating the complicated key combinations found in other word processors. Margins, columns, and tabs work the way you expect them to work.
- A full page of your work is always displayed. Printed copy looks the way you expect it to look. You can use underlined, bold, italic, superscript, and subscript type. You can use justified printing. No print controls are embedded in your text.

Order direct or write for information.

Engineers don't talk like no other software

CP/M users. To use the XMODEM option, both the sender and the receiver must type $\backslash x$ after entering the name of the file being transmitted.

The file is then sent automatically, one 128-byte "block" at a time. The block includes some special characters, including a "checksum" representing the sum of the ASCII values of the characters in the block. Only when the remote computer determines that everything is in order does it send out for the next block of data. If something is wrong, the remote machine asks the sending machine to send the data again.

This particular protocol is in rather wide use in the CP/M world. It doesn't entirely guarantee that there will be no errors in a transmission, but it does make errors exceptionally unlikely. It's therefore an excellent way to transmit program files or other files in which accuracy is of the utmost importance. This option is a real attraction, especially when communicating at 1200 baud over telephone lines of less-than-ideal quality. One caution: A file sent in this manner is likely to end up with NUL characters filling out the final block. This shouldn't affect a program file's operation, but if you run the PC-DOS COMP program on the original and the copy, you'll get a "Files Are Different Sizes" message.

Stripping Down

Perhaps the neatest new feature in PC-Talk III is character stripping and conver-

sion. Until now, I've been baffled and frustrated at receiving 20,000-character files of which I've been able to read only the first 3,400 characters. I guessed that somehow on end of files (EOF) character got stuck in there because of a transmission

P C-TALK III no longer has special keys for dialing The Source and CompuServe.

glitch. Now I discover from the PC-Talk III manual that certain remote services (including The Source) deliberately include such characters in their transmissions.

At your behest, PC-Talk III will change any incoming ASCII character to any other—or strip it out completely. You can do up to three characters at a time. And you can specify separate stripping options (carriage return to space, backslash to slash, whatever) for each of the 60 phone numbers and individualized parameters in the dialing directory. EOF characters, you have met your doom.

You can set up stripping as a default, too. In fact, it's now possible to change various program defaults right from the keyboard while you're running the pro-

Get all the facts about the IBM Personal Computer.

Get PCTM Magazine!

Whether you already own an IBM Personal Computer or you're thinking about buying one, you need PC Magazine.

PC Magazine is the independent guide to IBM Personal Computers. Each monthly issue is packed with the latest information for everyone who's interested in IBM Personal Computers.

This is *the* magazine for finding out how to put together the best IBM "PC" system...and how to get the most out of it. Every month you'll receive hundreds of colorful pages of evaluations, insights, and straight talk from respected experts—professionals in computer science as well as lawyers, businessmen, writers, educators and many others.

PC covers software, hardware, applications, and every other topic of importance to the thousands of IBM Personal Computer users who read it. To make sure that we give you the facts you need, we include a special "User-to-User" section, a "PC Wish List," and news about IBM Personal Computer clubs, events and publications.

Right now you can save up to 31% on an introductory subscription. And if you're ever dissatisfied with PC, just write and tell us—you'll receive a prompt refund for all the unmailed issues remaining in your subscription.

gram. Alt-F calls up a screen listing the current parameters (Figure 1). You may change any of them and retain the new settings either for the current session or permanently on disk.

THE documentation claims that PC-Talk III is now too fast for some remote systems.

Among the things you can change are the colors of the foreground, background, and high intensity displays—a boon for users with color monitors.

Slightly Defaulty

The defaults section of the version I received contains the only (and rather minor) program bugs I've managed to find in PC-Talk III. If you alter any of the

defaults and then change your mind, you can supposedly exit without making any changes. But if you do, and then return to the defaults screen, it will display the changed parameters—which in fact have not really been changed at all. If you happen to enter an incorrect value and save it, the program will tell you so—but despite the prompt, "Try again," you won't be able to do anything except use Ctrl-Break to exit completely.

Considering that PC-Talk III can even recreate its own default file—all you do is delete the old one before running the program—I don't consider these problems major. But when I called them to Andrew Fluegelman's attention, he came up with the fixes in a matter of hours and said they'd be incorporated in all new versions.

The way to find out what version you've got is to run the program, hold down a shift key, and hit the Tab key. A number should appear on the screen. If it's 0830326, you've got the one with the bugs. You can either live with them by being careful about the way you change defaults, get a later version from someone else, or make the modifications listed in Figure 2.

Figure 2: A procedure for correcting the defaults section of PC-Talk III.

1. Make a backup copy of the program disk in case you make an error when performing these modifications. If you know absolutely nothing about BASIC, it might be a good idea to get someone to help you with the rest of the procedure.

2. Type talk64 to load BASIC and the program PC-TALK.BAS.

3. Hit the Ctrl and Break keys simultaneously. This should abort the program and take you back to BASIC. When this is done, you will see BASIC's "Ok" prompt.

4. Hit Ctrl-Home to clear the screen.

5. Change lines 210, 5260, 9035 and 9999 to read as follows:

210 DFNUM=29: DIM DPS(29): DIM DS(29): DIM DT\$(29)

5260 GOSUB 2500: IF QS=CHR\$(27) THEN GOSUB 2655: GOSUB

2655: ABORT=-1 ELSE IF QS<>" THEN DT\$(I)=QS: IF

DT\$(I)=" " THEN DT\$(I)=""

9035 IF ERL=5280 THEN BEEP: GOSUB 5295: PRINT TAB(32) "Invalid

communications parameters. Try again.": EXIT=Q: RESUME 5215

9999 DATA 830424

(The easiest way to make the changes is to LIST each line, correct it, and hit the Enter key while the cursor is still on the line.)

6. Add new lines 5231 and 5271 as follows:

5231 FOR I=1 TO DFNUM: DT\$(I)=DS(I): NEXT

5271 FOR I=1 TO DFNUM: DS(I)=DT\$(I): NEXT

7. Type SAVE "PC-TALK.BAS", then press Enter key.

8. Type SYSTEM, then press the Enter key to exit to PC-DOS.

Your corrected interpreter version of PC-Talk III is now on the disk. To compile it with the BASIC compiler, follow the instructions in the PC-TALK III documentation.

THE BEST IN ENTERTAINMENT

For your IBM® PC

**COSMIC
CRUSADER**

COSMIC CRUSADER

by Michael Abrash

The year is 2040. You return from deepspace patrol to find colony Tules IV abandoned and silent, with no sign of life. A frantic check confirms your worst fears—the star charts are gone! With the charts, the marauders can strike at the very heart of the Terra Centre—Earth herself.

You only hope to track down the alien fleets and keep them from reaching home base. If even one ship escapes you, the marauders will soon be flashing saucers past the orbit of Mars (toward a peaceful, unsuspecting Earth).

SNACK ATTACK II

by Dan Illowsky and Michael Abrash

You've got it again! First that empty feeling; then the pangs. Finally, you hear it...rrr... You are having a Snack Attack. Your only cure is to gobble up as many gumdrops as you can grab away from the greedy gumdrops guards. Watch out as the guards chase you around maze after maze full of gumdrops!

So good it must be fattening

SNACK ATTACK II and COSMIC CRUSADER fully exploit the advanced capabilities of your IBM PC. They are written entirely in machine language for fast, smooth animation and complex sound effects. All Funtastic products are human engineered with user configurable keyboard controls, joystick option, Start/Stop and Sound Taggle keys, and multiple levels of play.

Requirements: 64K memory, color graphics adapter, one disk drive.

CIRCLE 252 ON READER SERVICE CARD

MEGAPLUS: THE ULTIMATE EXPANSION FOR IBM PC OR XT

**64k
\$289**

The AST Research MegaPlus™ has three functions standard. Parity checked and fully socketed memory up to 256k in 64k increments, clock/calendar with battery back-up for automatic loading of time and date when the computer is turned on, and asynchronous communication port (RS232C serial) which can be used as COM1 or COM2, (DTE for a printer, or DCE for a modem). Also included is SuperDrive™ "electronic disk" software. This program builds "disk drives" in memory which access your programs at the speed of RAM memory. And you get SuperSpooler™, print

spooling software. This program uses your memory to accept data as fast as the computer can send it and frees your computer for more productive work.

Options include a 100% IBM compatible parallel printer port and a second asynchronous port. Both options are socketed so you can add them later if the need arises. The printer can be configured as LPT1, or LPT2, and the RS232C asynchronous port as COM1 or COM2, DTE or DCE. The MegaPak™ option plugs into your Mega-Plus "piggyback" style to give you an additional 128k or 256k of memory. Unlike

some piggyback boards, this one doesn't take up two slots in your computer. Now your PC or XT can create disk drives in memory up to 360k, set aside plenty of space for print spooling, and still have memory left for your biggest programs.

And it is all backed up by our 'Cubie' satisfaction guarantee. If within 30 days of purchase you are not completely satisfied with your board we will refund the entire cost of your board including the postage to return it.

**From
\$129**

I/O-PLUS 2: MEGAPLUS SANS MEMORY

Here is the answer for those who don't need additional memory but would like all those other quad-function board features. The I/O-Plus 2 comes standard with a clip-on battery powered clock/calendar, an asynchronous communication port (RS232C serial). Also included are the SuperDrive™ electronic disk and SuperSpooler™ print spooling software. Optional is a second asynchronous port (DTE for a printer, or DCE for a modem), a parallel printer adapter, and the best game paddle adapter on the market. What's so special about our

game adapter? Not only is it an IBM standard game port, but it can also use low cost, widely available Apple compatible paddles and joysticks. And like its big brother MegaPlus, all the options are socketed so you can buy them later if the need arises. So if your memory needs are satisfied, I/O-Plus 2™ gives you all the input and output ports you might need — for less than the price of most single function boards. 30 day satisfaction guarantee included.

WHY BUY FROM US?

Because we provide the service and support most companies just talk about. Expansion boards and keyboards are fully tested and burned in prior to shipment. We realize how integral our products are to the use of your computer. What good is a warranty if it takes weeks for repairs to be made? We offer 48 hour turnaround or a replacement board on all AST warranty repairs. Do you hear anyone else making this promise? If you want to compare prices, remember, we don't charge extra for credit cards, shipping (except keyboards and furniture), or COD fees. We think the ultimate testimony to our good service and high quality is that one of our largest customers is none other than IBM!

CHEAP SOFTWARE TOO

What good is great hardware without some great software to use it with? We offer some terrific prices on some of the popular programs you will want to use your board with. How about the cream of the spreadsheet programs, SUPERCALC™, for just \$159. We now have the new standard for word processing software, SUPERWRITER for \$239. It combines a very powerful, yet easy to use word processing program with a spelling checker and the ability to do mailing list/ form letter generation. If you are looking for data base management you can get dBASE II by Ashton-Tate for \$419.

WORD PROCESSING KEYBOARD

We have improved the touch and moved some keys to make for more "finger friendly" use of your IBM PC. The irritating key click is replaced with more positive tactile feedback. There are lighted indicators to the caps lock and num lock keys, and the left side shift key has been moved to its normal typewriter position. An enter key

has been added to the right of the ten key pad. We even put bumps on the F, J and 5 key of the ten key pad to help your fingers find the "home" position. The keyboard is 100% IBM compatible, just plug it in and type away! It will even work with PC keyboard compatible computers like Columbia.

IBM PC WORKSTATION

Available color matched to the PC or in oak/black top and legs. This 24" deep table is designed specifically for the PC and is available in 26 inch and 32 inch widths. Table top and shelf are made of high pressure laminate. The desk is at typing table height for reduced fatigue. Optional casters allow the workstation to be easily moved from room to room. The 16" deep top shelf puts the monitor at eye level and provides a place for your library of manuals or printer without cluttering your workspace. (Printer is shown on top of the Printer Mate stand) Durable steel construction and baked enamel textured finish assure many years of attractive, sturdy use.

ADJUSTABLE PRINTER STANDS

These sturdy metal printer stands have adjustable support bars which can be positioned for custom fit to your printer base. Standard model has 21" bars which can be adjusted from 6 1/2" to 16 1/2" apart. A heavy duty chrome plated wire basket attaches to the rear to catch paper output in a neat stack. They are finished with black baked enamel, and are mounted on adjustable glide feet. Casters are optional.

They're easy to do for the interpreter-BASIC version, but if you want to incorporate them into the compiled model, you'll need the BASIC compiler.

Which brings me to a few comments about Freeware's update policy. It's simple: Fluegelman says he'll send notices of updates to all users who have sent him the suggested contribution, and he'll update a contributor's disk free of charge if it's sent to him with a postpaid mailer. Talk about user-friendly! Major software houses, are you listening?

Read All About It

I'm usually pretty hard on documentation, but the 70 pages you get here are better than most. How nice they look, of course, will depend on your printer—the manual is supplied on the program disk. Take the on-screen printing instructions seriously: The process does not seem to use form feeds and, since the documentation has lines near the top and bottom of the page, it's important to set the top of form correctly.

I didn't find any major errors or inconsistencies in the documentation, but a novice user may be pardoned some degree of confusion. Even though it's chock full of interesting tidbits, the manual is not a primer on communications. If you start out with absolutely no idea of what you're doing, you may run into problems. Occasionally, choice morsels are tucked away where you might not expect to find them. And more examples would have helped.

THE DEFAULTS section contains the only program bugs I've managed to find in PC- Talk III.

particularly in the section on parameters. I'm still not entirely certain how one might use the "Comm Init." and "Modem Init." parameters. I have a vague idea, but the manual doesn't really give me a clue.

The table of contents is well organized,

and so is the summary of all the available commands, but an index, missing here, should be standard in any documentation—especially in the kind of manual you have to reach for and use almost instantly before the guy at the other end of

AN INDEX
*should be standard in

hangs up on you.*

the line hangs up on you. A troubleshooting guide would also have been useful. And so would a table of error messages, particularly for the XMODEM protocol, which can give you some surprises. It's also somewhat unclear when the default parameters are in effect and when they're overridden. In any case, go ahead and start up the program and use the manual in conjunction with it—but be sure to read the documentation cover to cover.

Weak Spots

Quibbles? A few. The old version knew whether your modem was on and refused to perform if it was off. PC-Talk III can't tell whether your machine is on or off without some sort of modification that the documentation does not tell you how to make.

If the modem is off, the program can "hang" temporarily without giving you a clue why. Pretending to exit the program with Alt-X and then responding negatively at the next prompt seems to solve the problem without crashing the program—something, incidentally, that I couldn't do except by hitting Ctrl-Break, and sometimes not even then.

PC-Talk III uses line 25 as a status line for all sorts of things: Alt-key assignments, the name of the file you're currently downloading, a brief summary of the most important commands. Sometimes the sta-

10 MByte Floppy

Resolves Storage Backup Dilemma

Now there is a proven, effective disk storage subsystem, the BC-90, for the IBM Personal Computer and S-100 based microcomputer systems.

The BC-90 is a 90 Megabyte high-performance disk storage subsystem, consisting of two 10 Megabyte removable cartridges. This subsystem is a direct access storage device that uses flexible media. The media, a 10 Megabyte cartridge, is an efficient, durable polycarbonate enclosure containing a single flexible disk, internally latched to prevent user contact. This cartridge is easy to use, and can be safely transported in its own packaging.

The BC-90 is the simple solution to your disk storage backup dilemma.

Micro Synergy, inc.

ANNOUNCES

Immediate Availability Of 64K Bytes To 512K Bytes Of Memory

Micro Synergy has taken a systems approach to the add-on requirements of the IBM Personal Computer. The result ... a well-designed, easy-to-use memory board that offers maximum RAM capacity and excellent performance.

Maximum Capacity

- Up to 512K bytes using 64K bit DRAMs.
- Up to 1 Mega byte using 64K and 256K bit DRAMs.

Excellent Performance

- Full-speed operation — no wait states required.
- Full parity error detection standard.
- Multi-layer board — reduced noise and increased reliability.
- Gold-plated edge connectors for long, trouble-free life.
- Extensive burn-in for assured reliability.

Easy To Use

- 5-minute user installation in any unused slot.
- Socketed memory array facilitates user memory expansion.
- Fully documented upgrade and board operational procedures.

Price

64K-\$319.95	128K-\$414.95	192K-\$509.95	256K-\$604.95
320K-\$694.95	384K-\$784.95	448K-\$874.95	512K-\$959.95

Also Available

- Half height, rock solid 5¼ floppy disk drives from teac with unique brushless DC motor — low current — high reliability.

Micro Synergy, inc.

187 Ulmerton Road, Suite B, Largo, FL 33544
(813) 584-2488

tus line seems to change without changing back to what you might expect. At one point the status line forgot to remind me that I was still downloading a file after I went through a couple of other functions. That might have caused problems later on.

Perhaps the most annoying omission in PC-Talk III is that it doesn't have a dedicated command to tell your modem to hang up. When you log off some of the more common services, some data networks stay on the line to let you log in again. It's annoying to have to switch the modem on and off just to terminate the call. Assigning an easily accessible function key (two if necessary) to your modem's hang-up command will do the trick and save you no end of irritation.

Go For It!

There are plenty of ways to get a copy of PC-Talk III. The easiest is to find somebody else who's got one and run off a copy. The second is to send \$35 to the Headlands Press at the above address. The third is to send a formatted disk to the same address along with a postpaid mailer. Headlands will put the program on your disk and send it back to you.

One caution: Each version of PC-Talk III—interpreted and compiled—fits on a single-sided disk, but single-sided disks are too small to hold both versions. Headlands would prefer that you send one disk in the double-sided format, but if you only have single-sided drives, send two single-sided formatted disks.

Freeware is an idea that seems to work. Fluegelman doesn't know how many copies are out there, but he figures he gets contributions from about two-thirds of the

SSMARTCOM II
*is designed to be used
with an IBM PC and a
Smartmodem.*

people who've gotten the program from him, and around 10 percent of the rest. Other authors have followed the lead and are offering programs under the same sort of arrangement. When they're good—and

MICRO SYNERGY™ TAKES AIM with SixShooter™

some of them are very good indeed—they're the biggest bargains in the PC universe.

PC-Talk III stays in the ring as a tougher contender than ever. It's easy to use, it works, and you can try it for free. But even if you pay for it (and if you use it, you certainly should), I suspect you'll consider it a real steal.

Hayes Smartcom II

Hayes Microcomputer Products, Inc.
5923 Peachtree Industrial Blvd.
Norcross, GA 30092
(404) 449-8791

List Price: \$119

Requires: 96K, PC-DOS, one disk drive, asynchronous communications adapter, Hayes Smartmodem.

There's not much question about which modem is the current champ. The Hayes Smartmodem has become such a de facto standard in microcomputer communications in both its 300 and 1200 baud versions that many of the other modem makers now proclaim Smartmodem-compatibility. When it first came out, the Smartmodem 1200 seemed to be back-ordered till eternity; as of this writing, Hayes says it's down to almost no delay in shipments. And now there's a board version to stick into the backplane of your PC. I would not mind being Mr. Hayes.

Smartcom II from Hayes is what we might call "dedicated software." It's designed to be used with an IBM PC and a Smartmodem. If you buy the board Smartmodem, Hayes throws in Smartcom II as part of the deal. Whether "Smartmodem-compatibles" will work with this program is one of those difficult questions best answered—preferably in writing—by your dealer.

Smartcom II needs 96K RAM and PC-DOS 1.0 or 1.1 to run on the PC. Hayes says the program will run from PC-DOS 2.0, too, but that requires 128K RAM. The program can use up to 192K, at which point it becomes entirely resident in memory and no longer needs to import modules from the disk. The program is not copy-protected, and Hayes sensibly recommends that you make backup copies.

In terms of ability, Smartcom II is a heavy hitter indeed. It'll do just about everything PC-Talk III will do and then some. It can send and receive files in just

Fully loaded with

■ 0-256K Memory

■ Parallel Printer Port addressable as LPT1 or LPT2 or LPT3

■ Asynchronous Communication Port addressable as COM1 or COM2

■ Game Control Port

■ Clock/Calendar with Battery Backup

■ Optional Error Correction

And, as an added feature, SixShooter™ requires no internal cabling for I/O. Setup and disk software is included.

about every imaginable way. It'll let you store and receive special communications parameters for 25 different communications sources and let you tailor 25 special macro-instructions for each source. It'll strip undesirable incoming characters

IN REGARDS TO the user, Smartcom II is slow o i its feet.

such as the notorious EOF. It will allow you to take command of a remote computer's files or let your phone be controlled by a computer at the other end of the telephone line. It gives you a mind-boggling range of user-modifiable parameters. It even offers a rudimentary line editor for preparing files, its communication screens are gorgeous, and rewrites are exceptionally fast. And the program will address just about every feature that a Smartmodem is capable of.

The Menu Kid

There's just one problem: In regard to the user, Smartcom II is slow on its feet. The program is menu-oriented to a fare-thee-well, and there's no way to escape it. When you want to do something, you are almost always forced to look at the screenful of options and messages—even when you know exactly what it is you want to do. Smartcom II thinks it's real smart, but it seems to consider you a pea brain.

When you start the program—and many times thereafter—you are treated to the main menu. It uses three columns at the top of the screen to list ten potential options—some are usually unavailable and are represented by asterisks instead of numbers (see Figure 3). The currently

selected option is highlighted on the screen. Below that is a line of help, offering a more extended description of the currently selected option. And below that is a directory of the currently selected disk.

You're also given three status lines at the bottom of the screen. The top one displays information on the status of the modem and, when applicable, the printer and currently accessed disk file. Depending on the situation, the middle line shows messages or function key assignments. The bottom line keeps you current on the system time and date and the status of the Num Lock and Caps Lock keys.

How Smart Is Smart?

One of the few defaults you can't modify, and one of the most annoying, is the way the program forces you to begin with A: as the working disk drive. Almost certainly the first thing you will have to do is change it to something else. If by chance there is no disk in the drive you pick, the drive will spin merrily until the program decides, incorrectly, that drive B: is in fact available. You won't get an error message from PC-DOS or from the program until you try to do something with the drive, at which time you may get a File Error message. Smartcom II isn't smart enough to recognize there's no disk in the drive.

To select the highlighted option, you can simply hit the Enter key. To choose a different one, you can press its number. Or you can move the highlighting through the menu by using the left and right arrow keys. Those keys, oddly enough, move you up and down through the columns—just the first of many slick counterintuitive punches Smartcom II has in store.

What a Set!

The first choice you're likely to make is option 2—"Edit Set." This inaptly-named function lets you into the world of what

Hayes calls "Communication Sets." A Communication Set is a cluster of parameters and macro-instructions that the user can customize for a particular application. If this doesn't sound any too clear, bear with me. The crack manual writers at Hayes never came up with an adequate definition of Communication Sets themselves.

Choosing "Edit Set" replaces the directory of disk files with a three-column directory of the 26 available Communication Sets, each preceded by a letter identifying it. You also get a new five-course mini-menu. You'll generally go to "Select Set," which lets you change the current Communication Set—say from the one for CompuServe to the one for The Source—by typing a letter. Or you can change the current choice by moving the highlighting up and down through the directory—again by using the left and right arrow keys.

Sparring with Parameters

Once you select a Set, you can view the Parameters screen by choosing the P

SSMARTCOM II
thinks it's real smart,
but it seems to consider
you a peabrain.

option. It will look like Figure 4.

Modifying these parameters is another less-than-logical process. Your friendly left and right arrow keys no longer take you through the options. To do this, you use either the down arrow or Enter key to move down and the up arrow key to go up.

YOU'VE GOT TO SEE IT TO BELIEVE IT

Introducing IBM PC-Compatible Hardware To Run Spreadsheet Software

It should be a simple thing, really, to see a full 132 column spreadsheet on your IBM PC. You shouldn't have to scroll up, down and sideways to get the full picture. Now you can see it all with **SuperVision**, a monochrome video interface board from **California Computer Systems**. It easily replaces your

IBM PC monochrome board. In addition, **SuperVision** offers a full 132 column by 44 row screen, a printer port, and 720 by 348 dot addressable graphics capability.

SuperVision supplies the features that have been missing for spreadsheets, financial modeling, and database applications as well as giving you a fast, full-screen editor to make life easier. **Z/Plus**, a fast **Z80B** based card with **CP/M** and a

full 192K of parity RAM is also available for your IBM PC.

Call CCS today and get the **FULL** picture.

**HERE'S WHAT
OUR NEW, 1200-BAUD,
DO IT ALL,
ONE STOP SHOPPING,
DON'T BREAK THE BANK
MODEM FOR YOUR IBM PC
LOOKS LIKE:**

Introducing the PC: IntelliModem™ from Bizcomp. With your IBM PC or XT, it looks like a big nothing.

That's because it's inside. Where any modem connecting your Personal Computer to the telephone network should be. And where you won't have to worry about all those little boxes, couplers, cables and power cords getting in your way. Or being knocked off your desk.

But just because the PC: IntelliModem is out of sight, doesn't mean it'll ever be out of mind. You'll continue to be impressed with its do-it-all capabilities for years to come. Advanced data comm capabilities such as automatic dialing and auto repeat dialing, for selectively calling people or other computers from your own computerized telephone directory. Or automatic answering, so your PC can receive messages even when you're not in the office.

More than just a modem.

Even more impressive is the PC: IntelliModem's ability to integrate both voice and data communication. By plugging a regular handset into the back of your PC, you can

So, where is it?

now switch between talking or listening and sending or receiving data—without having to hang up, re-dial or plug and unplug a lot of cables. So making connections is now much faster and more convenient.

The PC: IntelliModem comes complete with everything you need to start communicating immediately. Besides its sophisticated Bell 212A-compatible hardware, the PC: Intelli-

Modem includes a "friendly" software package with screen menus to guide you during use, plus complete written instructions for reference. And all this one-stop-shopping convenience is included in our modest price: \$499. Which shouldn't break anybody's bank.

So if you're ready to turn your PC into a fast-talking data communications tool, ask your local IBM dealer about the Bizcomp PC: IntelliModem. It's a whole lot more than a modem. Even if it looks like a great big nothing.

Well, sort of. If you hold down the Enter key, the cursor will first move most of the way down the first column, to the end of "Transmission Parameters." Then you find yourself at the top of the second column for "Keyboard Definitions" and "Protocol Parameters." When you get to the bottom of that, you'll get back near the bottom of the first column to work on

"Telephone Parameters." Smart?

Let's try our old pals, the left and right arrow keys. Surprise! They now change the parameters! If there are only two options (Full or Half for Duplex, say), pressing either the left or right arrow key will change the parameter and a second press will restore it. For options that allow more variation (character delay, for exam-

ple), the right arrow key will increment the number, and the left arrow will decrement it. You also have the option of entering a change directly from the keyboard. The program won't accept invalid values. But it will stupidly let you assign two special functions to the same key; when I did this by accident, only one of the functions actually worked.

The phone number area gives you 38 characters and allows you to include Smartmodem commands such as those for tone and pulse dialing, and to pause for a second dial tone. To change free-form data such as the phone number or the name of a Communication Set, you have to press the backspace or left arrow key to delete the current entry before you can enter a different one.

A couple of the Transmission Parameters are particularly useful. Selecting Formatted under Character Processing removes control and other undesirable characters from incoming data, whereas the Direct mode will leave them in. The Confidential mode will let you suppress the

display during file transfer. Page Pause will stop writing the screen when it's full and wait for you to hit a key before going further. Data still comes into the buffer,

delay sending each line until it gets a specific prompt from the remote computer or it has waited a specified amount of time. A different prompt may be given for each line.

Since the remote computers I access only accept information one line at a time when they prompt me for it, I can't say I've

ever encountered a situation where this feature would really come in any handier than PC-Talk's ability to send long strings with carriage returns in them. But given the depth and breadth of the communications world, I suspect this responding-to-prompts feature of Smortcom II must be highly useful to somebody.

THE LEFT AND right arrow keys, oddly enough, move up and down through the columns.

though. It's a nice way to keep incoming data from scrolling off the screen before you have a chance to read it.

When you get down to the bottom of the screen, you can save your parameters to disk or simply hang on to them for the session. But if you realize you've made a goof, there's no way (short of telling the program not to save the changes to disk, and then exiting the program) to leave the screen and restore all the original parameters.

Big Macros

After you select a Communication Set, choosing the M command gives you a directory of the 26 letter-labeled macros available for that set. Pressing a letter lets you see the contents of the macro you've selected.

"What the hell is a macro?" shouts a skeptical nontechnical voice from the crowd. Good question. A macro (short for macro-instruction) is a sequence of instructions you can store on a disk or save only for the current session, and send to a remote computer. With Smortcom II, the macro Z is always reserved for "Automatic Log-On"—the series of responses the program gives a remote machine when it first acknowledges your computer's existence. Once you're on-line, the other macros can be called up by hitting the Macro Prefix Key (one that you have previously defined) and the letter that identifies the macro.

The Macro Definition screens (Figure 5) let you insert up to 16 lines of data, all of which will be sent with a single keystroke. Each data line can be up to 48 characters long, and you can instruct Smortcom II to

CIRCLE 108 ON READER SERVICE CARD

The manual explains a helpful strategy for developing macros by using your printer to document the commands sent between your computer and the remote machine. Unfortunately, information on actually preparing the Macro Screens is rather sketchy. The data entry method turns out to be the same one you use on the Parameters screens. But it's still not entirely clear, for example, when you should turn the Prompt setting "off" and when you should set it to be a space.

Hayes has included macros for accessing some much-used features of such popular services as The Source, CompuServe, and the Dow Jones News/Retrieval Service. Studying these pre-installed sets is probably the very best way of finding out how macros really work. Once you get the hang of it, it won't be much trouble to develop a macro that will whiz you through CompuServe, send you directly to the CB emulator, swiftly type out your handle, and leave you ready to bore dozens of people throughout our great nation.

Special Moves

There are a couple of other things you can do from the Edit Set option. One is copy an entire Communications Set to another. You can't copy selectively—every parameter and macro has to go into the new set—but it's useful if you've developed a lot of macros for a remote system you access at two different baud rates or through two different phone networks.

You can also print out reports for any set you choose, either a detailed report listing all parameters and macros for a given set or a summary listing the macro directory for every defined Communication Set.

Getting on line is fairly straightforward. From the main menu you simply choose the "Originate" option, select a Communication Set, and let Smartcom II perform the dialing and log-on operations. To do these manually, you have to use a Communication Set that lacks a telephone number and has a blank automatic-log-on macro.

The manual explains how you can use a Y-connector to hook up your telephone and modem so that you can communicate orally and then connect both your computers without redialing. Unfortunately, this requires some sneaky ways of getting

around Smartcom II's automatic dialing features. This method turns out to be significantly more complicated than doing the same thing with PC-Talk by addressing commands directly to the modem—something that's difficult to do with Smartcom II.

YOU CAN HOOK up your telephone and modem so that you can talk to someone orally and then connect both your computers without redialing.

Once on line, you communicate with the remote computer from your keyboard. Unless you've reassigned them, function keys F1 through F6 take over the duties indicated in the middle status line. F5, the Macro Prefix Key, tells the machine that the next letter key you press is really a macro command. F6 sends a sustained break of stop bits and F3 routes incoming data to the printer.

F4 is the Capture key. Pressing it records data to a disk file called TEMP. Pressing it again suspends data capture. A third press lets you append data to that file. And so on. Pressing F1 ends that particular mode of downloading. At that point you have to supply a new filename for the TEMP file before proceeding.

There's also something called a display buffer. This lets you look at already-received data at your leisure while more data is coming in. The Home key shows you the first screenful of text in the display buffer—usually the beginning of the session. PgDn and PgUp move you forward and back 16 lines in the text; the up and down arrows scroll text a line at a time. The End key takes you back to a display of currently incoming data. This feature is definitely a plus when you want to see what you typed in 10 minutes ago.

When you're on line, pressing F1 sends you back to the menu screens—to check your macro directory, for example, or to check your disk files. Your current screen of text disappears until you go back. This

is a real nuisance and can be especially galling when you want to send or receive a file, but there's no way around it. Worse, if you're receiving a disk file with the Capture key, you can't get back to the main menu unless you first close and rename the file.

You can send and receive files with

any of three protocols: Start/Stop, Send Lines, and Verification. The Start/Stop protocol is the one you're most likely to use for standard text files; Send Lines is much like PC-Talk II's pacing option. Verification is a special Hayes protocol that will work with other Hayes software packages and very little else. It sends data

DUMB:

in blocks in much the same way as the XMODEM protocol, but the two are, emphatically, not compatible.

Taking Command

Probably the jazziest feature of Smartcom II is its ability, when transferring files, to "take over" another computer if it

uses the same software. This is a bit complicated, but it does work. Both machines must be using Smartcom II, and the remote user has to set parameters that will allow his machine to be accessed via remote control. Not just anybody can get at the remote computer: it's protected by a password. The controlling computer can

get a directory of any disk drive on the remote system. The manual kindly points out that the remote system may crash if asked for a drive that doesn't exist or doesn't contain a disk.

Once you've gained access to the remote system, you can upload and down-

load files to and from it, read its disk directories, and even rename and erase any files on its disk drives. This could be extremely nice for an office that wanted to exchange communications after hours. But there's no way to allow partial access to the remote computer; you can't, for example, disable a caller's ability to delete files. It's either all or nothing.

A Few Quick Notes

An option called Create, accessed from the main menu, gives you a rudimentary text editor that lets you view and print files as well as type new ones in. You can append more data to a file already in existence, but you can't view the original portion of the file while you're actually working with the editor. The Create mode might be handy for dashing off quick notes without exiting the program to call up a word processor, but considering that you can only correct data a line at a time—and then only by backspacing—it's not terribly worthwhile for much else.

A screen called Configuration lets you change such basic system parameters as the printer configuration and the communications port, as well as more arcane items like the pause between dial tones.

Literary Offenses

The manual is standard IBM height, though the box is thin cardboard and the ring binder is silver plastic. It has very readable type, attractive line drawings, and color-coded tab separators.

Unfortunately, its beauty is only skin

Good News for VisiCalc® Users

INTEGRATED GRAPHICS For Under \$100!

Required hardware: IBM P.C. with 128K RAM (DOS Version 1.1) or with 192K RAM (DOS Version 2.00) and at least one 5-1/4" diskette drive. For screen graphics: IBM Color/Graphics Adapter and compatible color or monochrome display. For printer graphics: IBM or Epson printer with GRAFTRAX option and IBM Color/Graphics Adapter. **Required software:** IBM DOS, Version 1.1 or Version 2.00, VisiCorp VisiCalc, Extended Memory ("256K" or "512K") Versions, or IBM VisiCalc, Version 1.10 or greater.

In just a few keystrokes, transform the columns of figures from your VisiCalc spreadsheet into a pie chart or any of 7 other types of charts and graphs. Without ever leaving VisiCalc!

That's only the beginning. The **StretchCalc™** program also adds powerful spreadsheet management and user-convenience features. At a fraction of the price of comparable products.

- **GRAPHICS:** Eight kinds of charts and graphs allow you to uncover important trends and patterns behind that mass of numbers. View the graphics in your choice of color or monochrome. Or print them. Either way, you gain immediate impact from your data that those rows and columns just can't provide.
- **SPREADSHEET MANAGEMENT:** Need to examine your budget, portfolio, or sales forecast by relative value of spreadsheet entries? **StretchCalc™** SORT commands automatically rearrange your spreadsheet based upon its contents. Would you like the convenience of obtaining a single page summary of a large spreadsheet with a single command? A REARRANGE command lets you instantly set the columns of your spreadsheet in any order.
- **USER CONVENIENCE:** Store a series of VisiCalc commands under a function key. One keystroke and the **StretchCalc™** program executes them for you. Up to 66 sets of VisiCalc and **StretchCalc™** commands can be stored in a single diskette file. No more memorizing the right sequence or recovering from costly keystroke errors.

The **StretchCalc™** program is available now for just \$99 [49 without graphics]. A lot of added capability for your VisiCalc spreadsheet at a modest price. Ready to order? Need more information? Call toll free 1-800-322-4110 or, in Oregon call (503) 626-4727. We'll accept your VISA or MasterCard orders or provide you with the name of a dealer carrying **StretchCalc™**.

1200B and Smartcom II software
are available now.

Thanks to Smartcom II companion
software, telecomputing is a
breeze. You'll be creating files
and sending data in no time.

Need important information from the
main office...today? Get it quickly,
efficiently, accurately. From their
computer to yours.

Hayes

Your computer's telephone.

Hayes is still leading the way with new telecomputing products. And now combining every bit of sophisticated technology into one communications package for your IBM® PC. Smartmodem 1200B and Smartcom II™ software. Everything you need. And more.

Whether you're receiving updates from the field, placing orders with suppliers a thousand miles away, or taking advantage of the diverse resources offered by networks and information services. Let Hayes provide the communications link. With our popular 1200 bps Smartmodem. Now available as a convenient plug-in board for the IBM PC. And packaged with our own communications software.

Smartmodem 1200B. Your computer's telephone. That's really what it is. A telephone that allows your computer to communicate over ordinary phone lines at up to 1200 bits per

second. For speedy, economical transmission of data to any Bell 212A or Bell 103 type modem. And it's the one peripheral that vastly expands the usefulness of your computer.

Our single board Smartmodem 1200B can be installed by your computer dealer in minutes. It connects directly to your phone jack, operating with rotary dial, Touch-Tone® and key-set systems. Smartmodem 1200B will dial, answer and disconnect all of your calls automatically. It will even redial your last number upon command.

Smartmodem 1200B also features an automatic speed selector, that detects incoming transmission speeds. Along with screen displays to show you its current operating status. And, unlike some

1200 baud modems, Smartmodem 1200B operates at full or half duplex, for compatibility with most time-sharing systems.

For those who enjoy designing their own programs, Smartmodem 1200B is controllable using any programming language. But none of that is necessary. Thanks to Smartcom II. The communications program designed by Hayes, specifically for Smartmodem!

Smartcom II companion software. Maximizes Smartmodem's capabilities. Minimizes your effort. The first time out, you'll be creating messages, sending, printing and storing them to disk. Simultaneously.

And when you're on the receiving end, your IBM PC will do all the work, completely unattended!

But that's just part of Smartcom II's innovative story. For instance, before you communicate with another system,

 **Hayes®**

Imagine. Your computer can receive, print and store data, concurrently. Without your even being there!

A complete plug-in communications package for the IBM PC.

Smartmodem 1200B (includes telephone cable)

Smartcom II communications software.

you need to "set up" your computer to match the way the remote system transmits data. With Smartcom II, you do this only once. After that, parameters are stored in a directory on Smartcom II. Calling or answering a system listed in the directory requires just a few quick keystrokes.

You can store lengthy log-on sequences the same way. Press one key, and Smartcom II automatically connects you to a utility or information service.

And if you need it, there's always "help." One of several special functions assigned to your IBM function keys, this feature explains prompts, messages, etc. to make communicating even easier.

Smartcom II also provides a directory of the files stored on your disk. Letting you create, display, list, name, re-name or erase any file right from the screen.

Like all our products, Smartcom II and Smartmodem 1200B are backed by excellent documentation, a limited two-year warranty, and full support. From us to your dealer to you.

So, see your dealer today. Link up to the exciting world of telecomputing. With Hayes complete plug-in communications package for your IBM PC.

Hayes Microcomputer Products, Inc., 5923 Peachtree Industrial Blvd., Norcross, Georgia 30092. 404/449-8791.

Requires an IBM PC with minimum 96K bytes of memory; IBM DOS 1.10 or 1.00; one disk drive, and 80-column display. No serial card or separate power source is needed.

CIRCLE 259 ON READER SERVICE CARD

deep. This is a complex program with a lot of capabilities. The manual does not offer an index—or even a rational scheme of organization. I have never done more frantic page-flipping than in trying to learn about this program. As I use Smortcom II, I keep discovering nifty features, like a way the program can send form feeds to the

printer to skip over perforations, but I can't for the life of me find any documentation on them.

The Escape key, usually the only way to return to a previous menu, is so casually documented it's woefully easy to miss. Hayes makes matters even worse by calling a key other than the Esc key the Escape

Key (F1 by default). Sometimes the Esc and Escape keys perform the same function; sometimes the Esc key does absolutely nothing. You find this out only in the manual's troubleshooting section.

HAYES HAS included macros for accessing some much-used features of such popular services as The Source, CompuServe, and the Dow Jones News/Retrieval Service.

The functions of such keys as PgUp and Home are mentioned in the introductory chapter and then utterly forgotten. Also in the introductory chapter, and nowhere else, is some truly arcane information about cursor positioning sequences for terminal emulation. There are plenty of step-by-step examples of communicating with remote computers, but these are often given in place of true how-to instructions rather than as an addition to them. I can see many novices will wag their heads in utter befuddlement.

The manual betrays the haste of its creation in other ways, too. Two graphs depicting the difference between analog and digital communications have their captions switched. And the rare cross references to the other parts of the programs always refer you to a chapter, never to a specific page.

The troubleshooting section isn't bad, though, and if you can find what you're looking for, the reference pages in the back can help. But there's no table of error messages. I got a "File Error" when trying to write a file to an empty drive, but that message doesn't seem to be documented in the manual. Nor are such surprises as the fact that when you're using the remote access feature, the remote machine's disk directory is sent to you as a file called SCOM.SSS.

True, there is copious on-line Help.

MAINFRAME MATH FOR YOUR IBM P.C.

THE BEST HIGH SPEED MATH PACKAGE:

- The HCW Math Package makes your math intensive applications run up to 180 times faster, with better accuracy. The Math Package provides 68 high performance, high accuracy operations including: addition, subtraction, multiplication, division, square root, as well as trigonometric, exponential and logarithmic functions.
- The HCW Math Package libraries work with the IBM PASCAL Compiler and the IBM MACRO Assembler. The libraries are easy to use, and take up less room in memory!
- The HCW Math Package is supplied

with complete source code, so custom functions (such as scientific, econometric, graphic functions) can be easily added.

- The HCW Math Package comes with fully illustrated installation instructions. The chips are already inserted in carriers. no more bent pins!
- A software subscription service is available, updating you to new releases of the libraries (IBM FORTRAN and IBM BASIC Compiler support coming soon).

**Complete Package:
\$295.00**

but, like the manual, it depends too much on computer jargon and is often less than helpful. Still, the on-line Help is a whole lot easier to find than anything you'd have to look up in the manual. It's nearly always there at a press of the F2 key; when it isn't, you probably don't need it.

Heyes would be wise to produce some completely revamped documentation. While Heyes does this, it could redo the Smartmodem's manual, too. That book is a hacker's delight, a user's despair.

The Heyes limited warranty says that the disk will be free from defects for 90 days, but makes no promise that the program will work. This kind of obnoxiousness is getting to be Standard Operating Procedure in the industry, and it's especially sed to see it coming from a company as highly respected as Heyes. It's one thing to complain, as some manufacturers do, that there's no way to know what kind of crazy equipment a user might have; but Smartcom II is a program designed to run with two specific pieces of equipment: the IBM PC and the Smartmodem. I mean, is Heyes worried that you might have a laser printer that Smartcom II won't support, or what? At least it provides a helpful during-business-hours hotline—to be used at your own telephonic expense. My one experience with it got me some woefully incorrect information.

If you believe the warranty, your sole recourse in case of trouble is to get a new program disk free if a problem occurs within 90 days, or pay "the applicable replacement fee" if the problem occurs after that time but before you've owned the program 2 years. And that's permitted only if the problem is not your fault. There's no indication of what to do after 2 years, or if in the meantime your tipsy brother feils in an attempt to balance his piña colada on the edge of your disk. But there is an indication of what a replacement disk will cost you during the after-90-days-but-before-2-years period: 20 bucks. The warranty adds, "but this fee may change..." Downward? One suspects not. Any update policy? Heyes doesn't say.

From talking with the people at Heyes, I get the distinct impression that they're not going to be as strict about their replacement policy as the warranty would have you believe; they will probably supply updated versions for the \$20 fee. It

would be nice if they'd tell this to the legal eagles who undoubtedly wrote the warranty.

The Winner?

Smartcom II is smart, all right, but it could be a lot smarter. If you're no fan of menus, Smartcom II will not be to your

liking. Since there is no free trial, I'd emphatically recommend you try a test bout (including a few rounds with the manual) before you render your final decision. And, no matter what modem you're using, you'd be smart to speer with PC-Talk III. It just might knock you out. Or at least win on points. /PC

Tidy
your
life...
Let

SHOEBOX™

schedule your affairs!

The fact is, you're probably spending too much time trying to keep track of your time and your expenses. Aren't there other things you'd like to do?

Do you suffer from any of these symptoms?

- Missed appointments
- Blown deadlines
- Forgotten birthdays or anniversaries
- Lost expense records
- Unbilled project or client hours
- Late expense reports
- Trouble remembering what you've done or whom you've seen
- Lack of direction
- Uncertain priorities
- Not enough time for the really important things

If you answered "yes" to any of the above, SHOEBOX can help you. It's a complete system for managing time and expenses that's *really* easy to use. This SHOEBOX can hold and organize all those little scraps of information that turn so quickly into a hopeless jumble.

SHOEBOX provides unique features:

■ **Appointments management:** An intelligent calendar that lets you plan your daily schedule, as far ahead as you like.

■ **Reminders:** A separate, intelligent things-to-do list and tickler file—great for deadline items and recurring chores.

■ **Expense recording:** Room for detailed entry of single or multiple expenditures connected with any appointment or reminder—including account, category and comments.

■ **Recurring schedule items:** Put it in once, and it will reappear as many times as it needs to, no matter what the pattern of recurrence—whether it's the every-Tuesday meeting, a quarterly tax deadline or your mother-in-law's birthday.

■ **Advance notice:** As much early warning of an item as you need.

■ **Printed schedules:** Quick, hardcopy take-along schedules.

■ **Expense Reports:** Detailed expense summaries for any period of time you select, organized by account or category.

■ **Check-offs:** Mark reminders completed, or let the undone ones stay with you until they're cleared up.

■ **Histories:** Recall all your past appointments or reminders involving a given person or subject.

■ **Multiple-user:** Share your SHOEBOX but retain privacy for your information with password protection.

■ **One for all:** A single operator can coordinate schedules for many individuals

■ **Ease of use:** No knowledge of programming languages required...Single-keystroke commands...Lots of on-screen help for the new user...

Help always available—never more than a keystroke away...A User's Manual that's actually readable. Sensible defaults for data-entry options.

SHOEBOX offers a lot. What does it ask of you? Just an IBM Personal Computer (or compatible system) with 128K of memory, one floppy-diskette drive and, optionally, a printer that can put at least 80 characters on a line.

Suggested retail price is **\$195**

CIRCLE 463 ON READER SERVICE CARD

The PC legal correspondent assesses the impact of computers on his Silicon Valley practice.

PC-AT-LAW

This week I negotiated a software license agreement for one client, an original equipment manufacturer (OEM) contract for another, and proposed a merger on behalf of a third. Not unusual work for a lawyer, except that I never left my house. In addition, I reviewed a "carbon" copy of a sales proposal, "mailed" a letter to a colleague, and sent a manuscript to a typesetter. Again, nothing unusual except that I didn't use paper, envelopes, or stamps.

For several years microcomputer users have envisioned the office of the future. While there is still much progress to be made, the automated office is fast becoming a reality for my law firm. Not only does the computer make it possible for the misanthropic among us to avoid business meetings, it also changes the way we work and occasionally allows us more time to play.

In our offices, we have our PCs working on a variety of tasks: word processing, telecommunications, litigation management, as well as simple file management and billing.

Our Computer Cornerstone

Word processing is the real mainstay of our firm. Everything from contracts to wills is typed on our PC. (Unlike most traditional firms, we make relatively little use of dictating equipment except for short letters.) First, we input a rough draft of a document. Then we edit it to our satisfaction. Sometimes another member of the firm will review a document, making changes or comments on the screen. When we agree on a final form, the document is checked for spelling, and then printed. Because a contract usually goes through several revisions during the negotiation

process, our firm prefers the page-oriented word processing features of *EasyWriter II*. This allows us to jump from page to page on the screen and to follow along on the printed manuscript.

Another great time saver is our library of form contracts on computer file. When we start to write a new contract, we extract from the file what is appropriate and modify it as necessary. As the library grows, the amount of entirely original decreases. The key here, of course, is keeping all the work carefully indexed so that it can be readily retrieved.

It's surprising how many law firms, even those that represent computer companies, still don't word-process their documents. Instead, they retype them draft after draft, introducing fresh typos and omissions with each revision. The next time you get a document from a lawyer, hold it up to the light and look for the telltale impressions left by the self-correcting typewriter. The only use for a typewriter in our firm is addressing envelopes.

Let Your PC Do the Mailing

I live about one tense hour from my law firm in Silicon Valley. I often prefer to work at home and forgo the race to the office, except when it's necessary for a face-to-face meeting. This month alone, through our telecommunications setup, I've saved about 30 hours of commuting and about 40 gallons of fuel. More important, I've been able to respond more quickly to clients.

Sometimes we draft a document at home and send it to the firm's PC for final checking and printing. Someone, of course, must be at the office to set up the computer to receive the document. Since our schedules all vary, and since the computer is often tied up, this presents some logistical problems.

THE ONLY use for a typewriter in our firm is addressing envelopes.

Lately, to get around this inconvenience, we've been putting documents in our Source mailbox so that the sending and receiving computers need not be on-line together. This means that I, doing much of my work after 10 p.m., can have a document waiting in our firm's mailbox for my early-bird partners. The Source has also introduced an encryption feature that allows sensitive documents to be sent in code. Conveniently, some of our clients subscribe to the Source or to other electronic mail services such as Tymnet. We find ourselves routinely sending documents to their mailboxes for review. Unfortunately, I know only a handful of attorneys who can accept electronic mail.

We also use telecom to gain access to

some of the many on-line databases that have become available. While we still use a traditional law library, our most cost-effective way of conducting research is through Westlaw, which, at about \$90 per hour, offers substantial legal resources and is a very powerful research tool. We also make occasional use of the many databases offered on Knowledge Index, a subset of the Dialog database.

The PC Goes to Trial

I am currently experimenting with the free-form date manager, DataFax (Link Systems) for litigation support. The free-form structure of the program allows me to enter descriptions of (or direct quotes from) the numerous documents associated with a particularly complex case. Normally a cross-index of all documents would have to be painstakingly organized. Using DataFax, this cross-index is created semiautomatically. Several hundred records, case citations, and dates can be cross-referenced in numerous ways that would be impractical without a computer. This extensive cross-reference system helps immensely at a trial by allowing instant access to documents, case citations, people, and dates.

Goodbye, Rolodex

Normally index cards or Rolodex systems are used to track files and cross-reference file numbers to citations. But we now use another database program for tracking clients and files and for providing cross-

You've got problems. Get an expert to help you. Get KnowledgeMan.

Why not dBASE II or 1-2-3? Because KnowledgeMan gives you the best of the data management and spreadsheet worlds...and much more—integrated to manage information like no other package can.

Designed to be more powerful and easier to use, KnowledgeMan has it all. Fast, efficient storage. Queries like IBM's SQL/DS. 3rd generation spreadsheet. Report writer. I/O screen manager. Statistics. Structured programming language. Security.

Introducing KNOWLEDGE MAN

The all-in-one software package that "Out-Thinks" the competition

- **Easy to get to know.** Goes to work fast with easy-to-follow documentation.
- **Friendly and intelligent.** Interactive. English-like commands. Answers spur-of-the-moment questions.
- **Organized.** Keeps track of data in concise tabular form.
- **Efficient.** Supports B+ tree indexing and virtual fields.
- **Neat.** Produces forms the way you want, on the screen or on the printer. Automatic editing and integrity checking.
- **Great with figures.** Statistics, including means and standard deviations. Square roots, logarithms, trig functions, random numbers, etc.

DO YOU NEED TO...

Store and retrieve data?

- Max fields per record
- Max tables open at once
- Max records per table
- Query multiple tables with a single command
- Dynamic list of query output
- Multi-level control breaks

Use a spreadsheet?

- Rows by columns
- Cell can extract data from independent tables
- Cell can be entire program

Make screens, forms attractive?

- Color: reverse video, blinking, half-intensity, bell
- Form: at-a-time processing

safeguard data?

- Passwords, data encryption
- Field level read/write protection

Managing Projects for ~~Fun~~ and Profit Using *optional required* Project Scheduler™

**NOW
MS DOS
version
available**

As a manager, you know the key to a successful project is good planning. Whether you are involved with engineering, R & D, Manufacturing, Construction or even Computers, you can't afford to overlook critical costs and deadlines.

PROJECT SCHEDULER™ is a project management program designed to help management meet deadlines and beat cost targets through fast and easy project forecasting, scheduling, control and tracking of project status. The menu prompts permit easy data entry for modification or update to large, complex project plans. The highly interactive design and visual display reduces project planning time by providing sophisticated "what if" analysis capabilities.

Features include:

- Critical Path is calculated and a Gantt chart is displayed after each add, change or delete.
- Interactive "WHAT IF" analysis.
- Display your data/plots using the monochromatic or color screen.
- Schedule projects by days, weeks, months or day displayed by week.
- Labor & Other cost data can be input to VISICALC® and SuperCalc® spreadsheet packages.
- Allocate tasks by:
 - Start & duration
 - Early start
 - Late start

- Create standard company Labor Grades, Other Direct Costs and Holidays:
 - 24 Labor Grades
 - 24 Other Direct Costs
 - 30 Holidays (multi-year)
- Create detailed & summary reports:
 - Project Schedule
 - Labor & Cost
 - by time period
 - by individual job
- Ability to "complete" jobs for performance tracking.
- Milestone annotation to identify special events in the project.
- Requires:
 - IBM DOS (160k Memory)
 - 1 disk
 - Monochromatic and/or Color display
 - Printer (recommended)

CAST BETTER, FASTER SPELLS WITH OUR CI-C86 C COMPILER

indexing for both. Most databases can be easily set up to provide reports for file management. We are currently trying to determine whether a vertical application (a set of customized input and report masks) of a standard database program (EasyFiler, IUS) will be as effective as a program designed especially for law office file management.

Getting Paid without Getting Swamped

We've experimented with three approaches to our billing. The first method involved simply making up a sample invoice on one page of EasyWriter II and copying it onto a new page when a bill was to be sent out. Then the actual billing information was typed over the sample form. The new bill was printed and a duplicate of it saved in a long document file consisting only of bills.

The second method consisted of using a VisiCalc template to create bills. The advantage of VisiCalc is that it does the arithmetic for you. The disadvantage is that it is inconvenient to enter long descriptions of the services rendered. While both billing approaches work, neither is entirely satisfactory.

We are now testing a new legal billing program. It's too soon to know whether it will be the best solution. It allows for itemization of services by date and service-code number, and it contains an accounts-receivable module that allows us to send out statements and age invoices.

The New Office of the Future

I think that microcomputers will have an increasing impact on how lawyers do business. An important implication for a firm of our size (three lawyers) is that the PC allows us to handle greater work loads than we could manage before. More importantly, we enjoy the luxury of remaining a small firm that can still compete with even the largest firms in terms of what lawyers call "quality work product." We aren't held up by typing pools or the U.S. mail, and we aren't buried by cases involving large amounts of paperwork. We can respond faster, more accurately, and more directly because of our computer power. /PC

Daniel Remer is completing his second book, *Computer Power for Your Law Office* (Sydex).

If your thirst for technology is combined with an interest in the IBM Personal

A N N O U N C I N G

TECH JOURNAL

FOR IBM PERSONAL COMPUTER USERS

To The Limits... And Beyond

As you well know, the IBM Personal Computer is proving to be the success story of the 1980s. Only 18 months after its introduction, the IBM Personal Computer commands almost a fifth of all personal computer sales—a remarkable achievement. At present the number of IBM Personal Computers in users' hands exceeds a quarter-million, with perhaps as many as half a million on the way in the next 12 months.

But despite its widespread public acceptance and the wealth of products now available to support it, we are convinced that vast areas of its potential remain unexplored, not to mention those products waiting to be introduced for which the IBM Personal Computer is the precursor.

For those serious enough about microcomputers to accept the challenge, the IBM Personal Computer represents a host of untapped possibilities.

For those with a genuine appetite for technology, there are ways of stretching the IBM Personal Computer to the very limits of its specifications. Ways to wilfully expand those specifications...to throw light into the dark recesses of its complex software systems. Ways to enlarge our understanding of the equipment and to increase its usefulness.

If this sounds appealing, then *PC Tech Journal* is for you. For it will be the definitive source of authoritative, technically-satisfying information about your IBM Personal Computer, its future transformations and the host of products developed to support it.

Why a Technical Journal?

The readership of *PC Magazine* has, in the last year, grown at a rate to match the success of the IBM Personal Computer itself. But as the number of committed readers has expanded, so has that portion of users who are not only interested in *output*—that is, using the IBM Personal Computer to better solve problems—but who care deeply about the *process* of the computer itself.

We consider you to be among that select group of readers. Your relationship

with microcomputers, vocational or otherwise, has led you to levels of technical competence and curiosity which go far beyond problem-solving. In effect, you have a compelling interest not only in what your IBM Personal Computer does, but also *how* it does it and how it can do more.

For you, technological sophistication is a welcome challenge, perhaps even something of an adventure.

In both its depth and breadth of applicable sophistication, we are confident that you will find *PC Tech Journal* a fitting match for your aspirations.

Enroll now as a Charter Subscriber at a special Charter rate ...and get your own copy of our Premiere Issue.

A Select Audience

Needless to say, *PC Tech Journal* is not for everyone. But among *PC Magazine*'s current audience is a sizable segment where *PC Tech Journal* will find an active, committed readership:

Practicing professional developers who will want to read the *Tech Journal* for information they can't find anywhere else.

Serious programmers—both full-time professionals and non-professionals alike—with a clear interest in expanding the range and utility of software compatible with the IBM Personal Computer.

Management and staff serving in MIS and DP roles with a requirement for intimate knowledge of the working processes of their companies' IBM Personal Computers.

Independent businessmen and professionals who understand the increased benefits of tailoring their IBM Personal Computers to their own specific demands.

Members of the scientific and academic community whose ability and training allow them to enhance their use of their IBM Personal Computer.

And, of course, anyone with a genuine appetite for state-of-the-art information about the emerging possibilities presented by the IBM Personal Computer.

A Menu for Technical Gourmets

Under the leadership of Editor-in-Chief Will Fastie, author of the widely respected "IBM Images" column in *Creative Computing Magazine*, we've assembled a staff and a stable of regular contributors all with just the sort of demonstrated expertise you'd expect from *PC Tech Journal*.

Every bimonthly issue will be filled with useful articles on subjects such as...

• *How to fully exploit—or, if necessary, avoid—the complexities of BIOS, the IBM Personal Computer's installed firmware.*

• *Detailed examinations of component hardware available for the IBM Personal*

Computer, including multi-function cards, display devices, laboratory data acquisition equipment and voice recognition and synthesis devices.

• *Elegant programming methodologies which exploit the IBM Personal Computer's various operating system environments, plus reviews of new operating environments.*

• *Evaluation of the IBM Personal Computer's communications protocols and standards, including a detailed discussion of computer-to-computer interconnection, terminal emulation and distributed data processing.*

• *Plus a range of articles on networks, mass storage and important user development tools.*

Moreover, as *PC Tech Journal* evolves, it is our explicit

intent that you, our readers, play an important part in shaping the magazine. For we are convinced that it will be you who shape the future usefulness of the IBM Personal Computer itself.

To that end, we will make a special effort to involve you in the focus of the magazine, listening to your needs and together forging workable technical solutions to fully take advantage of IBM's revolutionary Personal Computer.

Charter Subscriber Offer

Just fill in and mail the coupon or the attached card. We'll enroll you as a Charter Subscriber, send you our Premiere Issue and bill you at the special introductory price—a discount of up to 33% (based on the full one-year subscription price.)

DRI insists that the attention it's now giving to PC-DOS does not mean that it will abandon CP/M-86 for the PC. What it means, according to marketing manager Carmen Governale, is new opportunities for DRI, software manufacturers, and PC users.

The New View From Digital Research

Digital Research's late May announcement that all of its powerful languages and utilities will include PC-DOS versions has far-reaching repercussions, especially for software applications developers. An interview with Carmen Governale of DRI's Language Division reveals some of the insights behind this move and answers many of our questions about what it means to the industry.

Digital Research will soon begin selling PC-DOS versions of its popular languages and utilities. This announcement has special importance for software vendors. It should mean increased sales for them and Digital Research. The concept behind these new versions is portability.

Portability means that a program's source code, the part saved in ASCII format, can be compiled on a CP/M-86 system or a PC-DOS system. It will work exactly the same way on both systems. Let's take a look at what this means to a software applications developer who has, for example, developed a word processor package written in Pascal that will compile and run under CP/M-86. Now the developer can take that same source code, compile it under PC-DOS, and sell it to the

large PC-DOS market. With very little extra development time, the software vendor has greatly increased his potential sales. This also means that Digital Research also can expect more sales for its language products.

**WITH VERY
little extra development
time, the software
vendor has greatly
increased his potential
sales.**

Many people probably associated the Digital Research announcement with its recent price adjustment for CP/M-86. The DRI operating system price was cut to \$60 so that it could compete more effectively with PC-DOS. Digital Research admits that CP/M-86 was slow getting off the mark due to the late introduction of the

operating system by IBM and by the high original price (compared to PC-DOS). DRI insists, however, that the introduction of PC-DOS compatible languages was made for entirely different reasons. The introduction may help CP/M-86 gain some popularity, although many observers remain skeptical.

In late April I talked with Carmen Governale, marketing manager for the Digital Research Language Division about his company's then forthcoming announcement. We talked about the languages that would become available (and when), the reasons and history behind the decision, future goals, and other important issues.

HUGHES: Which languages and utilities will be available from Digital Research to run on PC-DOS? What is the timetable for introduction of these packages?

DRI: We will be introducing most of our languages and utilities near the end of May or early June. CBasic compiler (CB86), Pascal MT+86, PL/I, C (later June), Level II Cobol, ASM86 relocatable assembler, SID86, Display Manager, and Access Manager will all be available to PC-DOS users during June.

**YOU
CAN MAKE
A FORTUNE
IN MICROS!**

THE MICRO COMPUTER BUSINESS WILL GROW FROM \$10 TO \$100 BILLION IN THE NEXT EIGHT YEARS! ARE YOU READY TO CASH IN?

The micro computer business is predicted to grow from its present \$10 billion to \$100 billion before 1990! Imagine the possibilities this opens for you! No matter where you live, if you're starting up or presently in business, no other industry offers you more opportunities!

Now, finally, all the inside information you need to secure a prosperous future in this dynamic industry is available in one place - **THE COMPUTER ENTREPRENEUR MANUAL**! An immense information source, compiled by our inquisitive research team, added by a panel of experts and business people from all areas of the computer industry!

We present the inside story of more than 100 lucrative computer businesses you can enter, where you'll find the real opportunities for the eighties: from one man operations like **Programming Author, Word Processing Center or Consulting**, to **Systems House, Service Bureau, Computer Store** etc! Many at little or no investment! All the invaluable facts and figures. How to start, Capital needs, Profit estimates and Margins, How to Sell and Market, How mixing technical or business experience need not stand in your way, Source of Suppliers, etc! Details that could take years to find out on your own!

We'll show you inside tricks, like how to never again pay retail for computer products and consumer electronics, even for one item - right now, while you're starting your business! How to get free merchandise and trade show invitations, etc. This alone will more than pay for the manual! You'll read actual case histories of other computer entrepreneurs, so you can learn from their mistakes, and profit from their success stories! Where you'll be one year from now depends on your actions today! Let us show you how to take the first crucial step!

Order now and take advantage of our limited introduction special, **THE COMPUTER ENTREPRENEUR MANUAL**, and a six month subscription to **THE COMPUTER ENTREPRENEUR REPORT/NEWSLETTER** (so you're always up-to-date with the industry), both for only \$29.95! You must be convinced on how easy you can strike it rich in the micro computer business - or you may return the manual for a full refund within thirty days! USE OUR TOLL FREE NUMBER TO ORDER!

EVERYTHING YOU NEED TO KNOW TO SUCCEED IN THE COMPUTER BUSINESS IS ALL IN THIS MANUAL!

THE COMPUTER ENTREPRENEUR MANUAL has the answers to all your questions about selecting, starting and successfully running a computer business! There has never been such a comprehensive collection of know-how and information about this business in one place! All the facts you need to plan and achieve your goals in easy-to-follow, step-by-step instructions! These are some of the 100-plus businesses covered in **PART ONE** of the manual, with the facts on How to start and run, Start-up Costs (Even how to operate on a shoestring), What profits to expect, Wholesale prices, Start-ups, Suppliers, future outlook, case histories for each, etc: **Systems House, Software Author** (who to sell to and who to avoid), **Service Bureau, Software Publisher** (How to find programs that sell), **Word Processing Service, Consulting and Consultant Broker** (use your skills or those of others, make \$150 - \$1000 a day), **The Incredible Games Business, Computer Store** (Franchises, Pro and Con, or a low inventory store in your home!), **OEM, Hardware Mfg, Data base and Teletext Service** (big prospect!), **Used Computer, Repair, Rent-A-Computer, Promote Fests and Trade Shows, Turnkey Systems,**

Bartering, Mail Order, Compile and rent mailing lists, Specialized Data Headhunting and Temp/Help Service, Tech Writer Shop, Custom Engineering, The highly profitable Seminars and Training Business, and many more!

Many new ideas and ground floor opportunities! Interviews and success stories on companies of all sizes! Privy info on the profits made: How some computer store operators net \$100 - \$250,000! The known outfits that made their owners millionaires, one of these low-key companies, making simple boards went from nil to \$30,000,000 and 100 employees in four years! Programmers that make \$300,000. Thousands of micro millionaires in the making, etc!

Whatever your goal is - Silicon Valley Tycoon, or just a business at home - we guarantee you'll find a business to suit you - or your money back! **PART TWO** of the manual is loaded with the know-how and "streetfighting" savvy you need, both as a novice or business veteran, to get started, to stay and to prosper in the micro computer business! A goldmine of information in clear and easy-to-use instructions. How to prepare your **Business Plan, Outside financing, The mistakes you must avoid, How to hire and manage employees, Incorporation** (when and how to do it cheaply), **Surviving bad times, Record Keeping, how to estimate your market before you start, Use multiple locations to maximize profits, how to promote and stay steps ahead of the competition!** How to get free advertising, free merchandise, free advice, **Free negotiating** with suppliers to double your profit margins, etc! Even how to keep a **present job while starting a business part time!**

Don't miss this opportunity to be part of this great industry - the next success story could be your own! Order the manual today! Part one and two bound in a deluxe ring binder, where you can also collect our newsletter (free for six months with the manual - a \$32.50 value!) - all for only \$29.95!

THE COMPUTER ENTREPRENEUR NEWSLETTER - ALL THE LATEST INSIDE BUSINESS NEWS! NOW! SIX MONTHS FREE WITH YOUR MANUAL!

You're always attuned to the industry and your manual kept up-to-date with our newsletter! Each issue has the latest business news, ideas, new suppliers, our indispensable "watchdog" column on profits, discounts (I don't miss mfg a penny, like recently, when top video monitor sold at \$80 - that's half wholesale, one third of the retail price!), the competition, the big deals, etc! Feature stories with start-up info and case histories on new micro businesses!

You'll get invitations to trade shows and conventions, the usage of our advisory service and our discount buying service for your purchases!

You'll find many items in our newsletter that will save you the cost of your manual many times over!

PC0783

HUGHES: Why should someone who has PC-DOS choose DRI's version of a language over versions already available?

DRI: I think that anyone who has bought any of our products in the past has done so because he can count on our technical support and because our software works. We have built a good reputation here at DRI. The new languages available to PC-DOS users will be bought with that reputation in mind.

HUGHES: When did DRI make the decision to create PC-DOS versions of its languages? Who was behind it?

DRI: The decision was made in September, 1982. Many people were involved in the decision. It was backed all the way by Gary Kildall, and then I inherited the job of pushing the project through.

HUGHES: CP/M-86 was offered late to PC users by IBM and the price was considerably higher than for PC-DOS. You were forced to offer CP/M-86 at a lower price to compete with Microsoft, which was grabbing the lion's share of the 16-bit market. What is the history of the decisions and strategies by DRI, starting with the original agreement with IBM, the price cut, and now the introduction of PC-DOS compatible software?

IF WE CAN
provide users with a
language that runs on
many different
machines, they make
more profit and so do
we.

DRI: I need to go back to February, 1982 to help you understand how this project just naturally evolved. DRI had just reorganized into three groups in order to better serve the different markets we were going after. We formed the Languages, Graphics, and Operating Systems Divisions to operate fairly independently of each other. In our group, the Languages Division, we asked ourselves, "How can we be most

successful with our languages?" The answer we arrived upon was, "We need to have our languages run on as many different operating systems as feasible." You have to remember, our main thrust at DRI is Independent Software Vendors (ISV) support. If we can provide users with a language that runs on many different machines, they make more profit and so do we.

The key to the whole issue is portability. When you can take an applications program in source format, move it from CP/M-86 to PC-DOS, and have it work exactly the same, you have portability. This is what our customers want and this is what we want to accomplish. Obviously, PC-DOS has made great market penetration on the IBM PC; we have to admit that. With this in mind, we decided to attack that market first. This is the history behind the decision. The fact that CP/M-86 has not done as well as DRI had hoped has nothing to do with our decision to create more portability with our languages. The decision by the Operating Systems Division to lower the cost of CP/M-86 was

made for entirely different reasons.

HUGHES: You mentioned that you decided to produce PC-DOS versions of your languages first. What other operating sys-

WE WILL
probably go after the
UNIX system next.

tems can we expect to see DRI selling languages and utilities for?

DRI: We will probably go after the UNIX system next. We hope to have a family of languages that will run on most mini-computers and microcomputers. UNIX would provide us with a good number of mini-computer customers.

HUGHES: What about UCSD p-system? Will you develop your languages for that operating system?

Check or C.O.D. Florida residents add 5% sales tax
Dealer and Distributor inquiries welcome

PC-DOS and CP/M are trademarks of IBM and Digital Research respectively.

DRI: Probably not, since their philosophy of operating systems is so different from ours. We write code for the actual machines; they write their software for a "pseudo-machine." It would be technologically difficult for us to develop our languages for their system.

HUGHES: Does the introduction of PC-

DOS compatible languages mean that DRI is conceding the dominance of the MS-DOS 16-bit operating system for the time being?

DRI: No, I wouldn't say that. PC-DOS has made great strides into the PC marketplace. I think that CP/M-86 will reassert itself soon. We also have very high hopes for our Concurrent CP/M-88 that has

almost unlimited potential.

HUGHES: Does this new strategy represent a change in direction and goals for DRI?

DRI: No. As I said earlier, we have always considered our support for ISVs important. The ISVs are our biggest customer by far. Creating more portability for our languages and subsequently the ISV's application programs has been a goal of DRI for a while now. The introduction of PC-DOS compatible languages is a natural result of our goals.

HUGHES: DRI is now intimately knowledgeable with both the PC-DOS and CP/M-86 operating systems. Is an operating system that combines the good features of each and that can handle both file and data formats a possibility in the near future?

DRI: That is an interesting question. I do not know of any such project at DRI. Also, I believe it would be technologically difficult.

HUGHES: At one time, it was virtually impossible to get a call through to your technical assistance department. I understand that DRI has made some changes to this department. What are these changes, and will DRI be able to meet the service needs of all its existing CP/M clients and your new PC-DOS users?

DRI: We have made some changes to help handle the volume of telephone calls we were receiving. After analyzing the situation, we realized that we basically had two groups of end users. The first is what we call the "passive users." They want answers to general questions; they tie up the phone lines. We have set up a general information network on The Source for anyone who has this kind of questions. We have also tried to provide more support for our dealers so that they can answer their clients' questions. The second group is the software developer. He is our biggest client and needs his technical questions answered promptly. We have set up a different phone number for ISVs, and they have to pay a small price for this "guaranteed support." But as software developers, they will want this extra support and will be willing to pay the small charge. /PC

INVENTORY MANAGERS

DOES YOUR PRESENT SYSTEM PROVIDE YOU WITH THE INFORMATION YOU WANT WHEN YOU WANT IT AND IN THE FORMAT YOU WANT IT?

S.S.R.'s provided computerized business solutions for 13 yrs. We've learned what you need and we'll satisfy those needs with **INFOTORY™**. Our software utilizes all the flexibility and potential of the **IBM PC. INFOTORY™** provides you with a system that's **easy to learn and use**, that satisfies the requirements of **Inventory accounting**, and most importantly, provides you with **Information reporting capability** that **can't be provided manually** and isn't provided in any other computerized inventory system.

We accomplished this with **ANYREPORT™**, our unique reporting feature that **sets INFOTORY™ apart from any other system**. Using it, you can get:

- Quantities, amount sold, cost of sales by vendor, by product type, or even by key words like "green" or "½ inch" within the description (sect. green sofa or fitting ½ inch copper).
- Any data you want—in alphabetical, description, p/n, location, descending sales order, or in whatever order and with whatever data your purchasing function, accountant, warehouse or sales people need to perform their jobs better.
- Summarized sales and cost of sales information by product category, by vendor or by each item—MTD and YTD.

How long would it take you to sort through and list, in whatever order, your inventory items costing between \$13.00 & \$21.00, purchased from XYZ company, that have a gross profit of between 25% & 32%, that you have more than 10 of in stock? Use **ANYREPORT™**, walk away and the report's ready when you return. **This is only one of the many benefits of ANYREPORT™.**

To learn more about the many benefits that **INFOTORY™** can bring to your business, **give us a call or stop in at your nearest dealer.**

The Compare II Story

as told by
L.L. "Bill" Packer
Director of Engineering
Solution Technology, Inc.

About a year ago, our company had a problem we solved by writing a utility program called COMPARE. I was asked to tell the story about how COMPARE evolved and why you might want to have your own copy. This engineering story spans about one year.

Early in 1982, Solution Technology, received a contract to implement a hard disk file server and database system using IEEE-488 communications links and Digital Research's MPM-II operating system. Here's the kicker, the project had to be done between the first of February and the middle of April. In all, I had five programmers working on seven different computer systems; some with hard disks and some with floppies. With so many machines, programs and archive floppies involved, plus an around - the - clock work schedule, all normal source control methods were a joke. Our two biggest problems were; what was broken when a program used to work, and who changed what when two programmers "fixed" something? I tried a number of different conventional control systems that only held the problem at bay. In the end, the control problem became so acute that I assigned a couple of my best

software engineers to come up with a way to compare two source files. Well, they designed a traditional file compare program called, naturally, COMPARE, and that program made our software control problem at least manageable. COMPARE I.1 was effective but slow, so we ran it mostly on the hard disks.

COMPARE I.1 was a useful program, but it needed work. First we had to remove the file restrictions so differences between files could be any number of lines long. Second, we needed the program to be able to compare the two input files in something less than an eternity. So back into the lab we went to see what software technology could be applied. We added a pinch of database philosophy and a dash of communications technique, and the result was

COMPARE I.2... a fast, line oriented file compare program which was very useful for programs and data files.

A short time later we were updating a technical manual for another contract and had to put change bars in each new issue to tell the end user where the changes were. Since text updates had been made by a number of people at different times, we attempted to use COMPARE I.2 to locate all the places that had been changed. While somewhat successful, we still had to draw the change bars by hand. This was a huge waste of time because the process had to be repeated for every new issue. Enough! Time is money, so back into the lab. First to add word by word scanning and second, to be able to generate change bars automatically. Again success! We created COMPARE I.3.

We have been selling COMPARE I.3 for nine months now with hundreds of sales, excellent reviews, and customers telling us that we have a fine text analyzer. We've been pleasantly surprised at how many writers and lawyers have been using this package successfully. Even so, some said, "Why don't you have a version for the IBM-PC and CP/M-86?"

Writers! Researchers! Engineers! Cut document makeup time from hours to minutes!

- ▶ Multi-Level Table of Contents
- ▶ Multi-Level Index
- ▶ Lists of Tables and Figures

Dealer and Distributor inquiries welcome

We listened. During the first months of 1983, we returned to the lab and added the most asked for features to the CP/M-80 version then did the code conversions for CP/M-86 and PC-DOS. What resulted was COMPARE II. In COMPARE II we give the user the ability to customize for his own default file name extensions, internal editor file formats, strings for change bars, strings, for difference highlight on and off, printer width, output to console, full document side by side listing, definition of comments (to ignore) and much, much more.

Order COMPARE II directly from your local dealer or Solution Technology, 1499 W. Palmetto Park Road, Suite 218, Boca Raton, Florida 33432; (305) 368-6226. Single unit price is \$145.00.

In the beginning, there was the printer.

And right on its heels came the first printer breakdown.

Unfortunately, the first printer service call didn't happen nearly so quickly, thus creating downtime – a problem that still plagues users today.

What's the answer? Non-Stop-Printing from Trilog.

Two heads are better than one.

Most dot-matrix line printers use only a single print head. That's fine – unless something goes wrong with the head. Then you're out of business until a service representative shows up.

On the other hand, the Trilog TIP-300 uses an exclusive two-headed system. Both 150 lpm print heads run simultaneously. Giving

you a total output of 300 lpm.

Should one print head temporarily fail, the user simply flips a switch and the remaining head continues printing at 150 lpm.

Now that's Non-Stop-Printing!

Dual heads offer another advantage, too. Instead of being pushed to capacity like most single heads, each Trilog head runs at a 50% duty cycle. This makes them much

Non-Stop-Printing.TM advance since the p

more reliable than conventional print heads.

Advanced innovation isn't just in our heads.

That's why we also gave Trilog printers dual tractors. They not only stabilize the paper and minimize friction, but allow the paper to move forward and backward. This gives you plotting capability and lets you generate forms. You can also print

bar codes. Plus business and engineering graphics.

Five printers for the price of one.

Besides graphics, the TIP-300 gives you four other types of printing: standard data processing characters. Letter quality characters that approach the sharpness of fully formed characters. And two versions of compressed characters for paper

savings and special formats.

For more information contact: Trilog, Inc., 17391 Murphy Ave., Irvine, CA 92714. Or call (714) 549-4079. TWX (910) 595-2798.

You'll see that compared to Trilog, other printers are still in the Dark Ages.

Non-Stop-Printing starts with

TRILOG®

The single greatest printer was invented.

"No, we're all okay, but our computer's gone."

It could have been a lot worse.

Luckily, all that was missing was the computer and some spreadsheet software. And that should be covered by insurance.

But it isn't. Ed didn't realize that once he started using his home computer on business projects, his homeowners insurance no longer would cover it.

As suddenly as the robbery had occurred, Ed found himself out several thousand dollars with no way to recover it.

You need SAFEWARE™

If you use your microcomputer for business, you can protect yourself from a loss like this with SAFEWARE. For as little as \$35 a year, SAFEWARE insurance covers all hardware, media and purchased software. Both business and personal.

SAFEWARE protects against theft, fire, accidental damage, even the destruction caused by power surges.

And, now, SAFEWARE is available on a 10-day trial basis. If you are not completely satisfied with the coverage provided, return the policy within 10 days for a full refund.

The only risk you take with SAFEWARE is not having it.

#1 with Words. A+ with Numbers.

Spellbinder Word Processing and Office Management Software.

Spellbinder processes words *and* numbers. So you save time and improve accuracy in any document: Financial statements. Budgets. Reports. Invoices.

Spellbinder lines up columns of numbers for faster data entry; calculates rows and columns; and puts the totals where you want them.

Spellbinder performs a number of mathematical functions, such as addition, subtraction, and multiplication; extends figures (for example, *6 dictionaries @ \$12.35 = \$74.10*); adds tax to invoices; and displays convenient reference tables.

You can edit numbers within a column, or move a column to a different location. Spellbinder's integrated forms handler saves time and manpower on multiple invoices, reports, and other documents.

The software for discriminating users. Whether you process numbers or words, you'll appreciate Spellbinder's unrivalled ease-of-use and superior capabilities. Spellbinder and an inexpensive microcomputer easily outperform *dedicated* word processing systems costing *up to three times* more. IBM is a registered trademark of IBM Corporation.

Spellbinder features flexible printing options; mass mailing and legal text capabilities; plus forms handler and boiler plate features for commonly used documents.

Spellbinder makes word processing much easier, much faster, and much less expensive. In fact, many of our users convert from some of the better known (and more costly) systems.

You should be just as discriminating. See your nearest dealer for a demonstration of Spellbinder. Or call Lexisoft at (916) 758-3630.

Now available in 8086 and IBM® Personal Computer format.

OUR SOFTWARE SPEAKS FOR ITSELF

WITH SOLUTIONS TO YOUR GRAPHICS, PLOTTING, STATISTICS AND MANAGEMENT PROBLEMS!

• **PLOTTRAX** is a user friendly, menu driven plotting program for your IBM PC. In just minutes, single keystrokes will convert raw data to scatter diagrams, line charts, pie charts and 3-dimensional bar charts.

PLOTTRAX performs ANOVA, linear or polynomial regressions, power, exponential and logarithmic curve fitting. Plotting features include arithmetic, both dual and tri-axis, log-log, semi-log and other combinations. You can plot 4 sets of data on the same axes!

PLOTTRAX supports the following plotter and printers:

- Hewlett-Packard HP7470A Plotter
- Epson MX-80 & MX-100
- IBM Personal Computer Printer
- Mannesmann Tally Printer
- Okidata Printer
- IDS Printer (please confirm model)

Includes demonstration files and manual. Requires 128K and color graphics adapter. Version 1.40. \$235.

• **JOBTRAX** is a planning and monitoring tool for engineering, architectural and construction projects. Use JOBTRAX for CPM scheduling, manpower/resource planning and budget/schedule monitoring. Turn your columns of numbers into graphic reports that are quickly and easily understood!

Includes demonstration files and manual. Requires 128K and color graphics adapter. \$325.

WE ALSO MARKET...

• **TRANSPLOT**, a screen dump that transfers graphics from your screen (or a window of your screen) to your Epson or IBM printer in less than 7 seconds. 8 1/2 x 11 inch format. \$27.

• **GRAFTRAX Plus**, an adapter for early models of the IBM and MX-80 printers (\$58) and the Hewlett-Packard 7470A Plotter (\$1450).

• **LeBOMB**, a fast-action video game playable with either your keyboard or joystick. \$27.

Prices valid through March, 1983.

Our policy: Send us your original Omicron Diskette with \$20 and we will return your diskette with the latest version.

claims. In fact, the program will do windows, but in a fashion quite different from the ammonia-and-squeegee routine you might expect.

It's not the ultimate software package, however, and it has its own problems, idiosyncracies and limitations. If you plan to analyze the entire U.S. economy, a high-powered spreadsheet would do a better job. If you're going to write novels, a dedicated word processor would be easier to use. But if your needs are modest, T/Maker III might be the only software you'll ever need.

The "T" in T/Maker III stands for "Table," since making tables is the function the program handles best. A table may be anything from a list of the calorie contents of diet foods to the entire bookkeeping system of a small business. In the land of computers, tables lie somewhere between spreadsheets and documents, and have some qualities of each.

Not content with just filling the middle ground between the two most popular type of business software, T/Maker III spreads out its capabilities in both directions. After all, the same computer routines that put columns of numbers on your monitor screen and move them around can easily work with words; the same math functions that calculate the numbers in tables can handle spreadsheets as well. Combine all these functions (and then some) and you have a software package that defies classification.

I
*TS LIST
of self-professed
abilities does come close
to being all-inclusive.*

A label that might be affixed to T/Maker III is "integrated data base management system with word processing," but that swatch of computer lingo doesn't come close to telling its whole story. Work with T/Maker III for a while and you'll discover it acts like a cross between an application program and a programming language like BASIC. Not only can you use it for simple chores like writing business letters and balancing your checkbook, you can even

use it to run programs of a sort. You can dump in numbers and let them churn around for a while, and in seconds or minutes an answer magically appears.

Then again, T/Maker III is unlike a computer language in its human-like approach to problems. Rather than writing program lines in a specific sequence, you only need to physically arrange data and instructions into a table on your PC monitor screen and T/Maker III will do the rest.

Yet T/Maker III shares one very important quality with higher-order computer languages—its real world applications are limited only by your imagination and ingenuity in using it.

Unwrapping the Package

T/Maker III's heritage became obvious with my first look at the documentation. The printed material reveals that the program began life in the CP/M operating system and was only recently adapted to the PC. Along with its thick Reference Manual and slick Quick Reference Manual comes an addenda sheet for IBM PC owners and, with recent copies, an added quick reference sheet dealing with "Editing Key-strokes for IBM Users."

Aside from the temporary look of the addenda sheets, the translation has been quite successful. The only outwardly visible change between the IBM version in PC-DOS (also available in CP/M-86) and the 8-bit CP/M-80 version is that some of the command keys have been reassigned to take advantage of the versatility of the PC's keyboard.

The 2½-inch-thick Reference Manual gives not only a reasonably easy to understand overview of the program and an introductory tutorial, but also a lengthy section on customization, which outlines how to reassign the command and function keys to suit your particular preferences and prejudices. This explanation is a feature that other software companies would do well to emulate.

The Quick Reference Manual, colorfully printed on heavy-duty, plastic-coated cardstock, gives a brief look at all the possibilities T/Maker III has to offer and a summary of the key-and-command combinations used to achieve them. Because T/Maker III is not menu-driven, this booklet is particularly valuable for those users—like me—who are too impatient to work through the tutorial.

On starting up the program, the first thing you see (after the copyright notice greets you) is a screen completely blank except for a lonely prompt. Although similar in purpose (mostly reassurance) to BASIC's "OK," the T/Maker III prompt

PERHAPS
*the most important of
all of T/Maker III's
commands is EDIT,
which unlocks its word
processing capabilities.*

includes more information. There are two numbers, indicating your location in the file you're working on ("1/1" when you start because you're in the first column of the first row), and a simple question: "WHAT NEXT?"

Your answer to that question must be drawn from a list of possibilities that is not overwhelming—T/Maker III uses fewer than three dozen commands. As with a programming language, however, a whole world can be built from this handful of instructions. Most of the commands require you to specify an operator or other parameters, so permutations can be created to perform a virtually endless range of tasks.

Many of the commands are dedicated to managing files. CREATE creates a new file; GET retrieves an existing one; SAVE fills an existing file with data that you have created with T/Maker III; and PRINT sends a file to your printer, just as you'd expect.

While most application programs automatically open a file whenever you start to work, T/Maker III resembles BASIC in its immediate mode, because you can do quick calculations and the like without bothering with a file. When working this way, your data stays in the RAM. However, T/Maker III requires that a file be created before any data can be saved; executing the CREATE command apparently destroys whatever you have in working memory. That means that if you don't create a file before you start thinking at the keyboard, you may have no way of preserving your work other than to print it.

SYSGEN ANNOUNCES TAPE BACKUP FOR THE IBM PC.[™] WITH OR WITHOUT HARD DISK.

Sysgen II-10 Fast streaming cassette backup with 10 Mbytes of disk: **\$2995.***

Sysgen II-20 Fast streaming cassette backup with 20 Mbytes of disk: **\$3795.**

Sysgen Image[™] Fast streaming backup for IBM's XT: **\$995.** (Right. Nine hundred ninety-five dollars!)

Sysgen is delivering complete low-cost Winchester systems with high-speed tape cassette backup.

Low cost means that everyone can afford to keep their valuable data safe and movable.

High-speed means you can back up an entire Sysgen II 20 Mbyte hard disk system in four minutes max.

Our hard disk systems operate under PC-DOS[™] or CP/M-86[™].

Under PC-DOS, they look like disk drives C. through L.

Under CP/M-86, you get fourteen new "disk drives."

And if you own an IBM XT, which includes a hard disk, you can get safe, fast backup with our new Image streaming tape cassette backup system for only \$995.

Look to Sysgen for fast, inexpensive backup. With or without hard disk.

CIRCLE 264 ON READER SERVICE CARD

On the other hand, by preserving the previous version of any existing file that is saved, T/Maker III helps prevent mistaken revisions from becoming irremediable.

Further file managing commands within T/Maker III duplicate enough of the primary PC-DOS instructions that you may never need to look at the PC's operating system again. You can peer at the directory (FILES), erase a file (DELETE), rename a file (RENAME), change the logged disk drive (DATA) and more. A sequence of several instructions, however, must be used to copy a file.

Another group of commands allows you to combine files and manipulate their contents. SORT and ARRANGE can be used to reorganize tables and spreadsheets. TALLY will count occurrences of number or letter combinations in specified columns of a table. COMBINE adds a table from one file to a table in another.

Rather than merely operating one at a time, these commands can be stacked on top of one another. You can type in an entire list of commands followed by a press of the Return key; then T/MAKER III will execute them, one after another. A WAIT command can be used to insert a pause between commands, should you like.

The most important command for stacking is LOAD, which will fill a template of a table or "mask" (essentially a blank spreadsheet that has been previously created) with data from another file. This is how T/Maker III functions like a

unlocks its word processing capabilities. Typing in this command will wipe the familiar prompt from the screen, and unleash new commands and an entirely different mode of operating.

Most accurately labeled a "screen editor," this function is the heart of the entire program. All information, whether numbers or words, is manually entered into files or worked upon through the editor.

The T/Maker III editor resembles most other word processors—it transforms the monitor screen into the electronic equivalent of a blank sheet of paper upon which you can write anything. Most standard word processing commands have been adapted to take advantage of the IBM-PC's generous endowment of function keys. Cursor movement, for instance, is handled from the keypad on the right side of the keyboard. If you, like me, have learned to process words with a program such as WordStor that uses a different arrangement of control keys, T/Maker III can be made easy to get along with. A separate program included with the software package, called T/Modify, gives you the most thorough and easiest-to-use customization procedure I've ever encountered. It allows you to reconfigure all of the available word processor commands to suit your tastes or previous training.

The first thing I did was to change over from the cursor control keys normally used by T/Maker III to the "diamond" of keys used by WordStor. That made adapting to T/Maker III almost painless.

It's not completely painless because T/Maker III omits some functions taken for granted in other word processors, and it does several things in unique ways which take some getting used to.

One of the biggest faults in the whole program is the lack of a "word left" cursor command. The choices for leftward movement are limited to single-character backspace and a full-line left by using the carriage return. T/Maker III also fails to provide line-by-line scrolling of the screen. Although the cursor can force the screen to scroll, the absence of true scrolling hinders you in running through long documents and makes the use of some of the program's advanced list processing features cumbersome.

Another shortcoming of the word processor is its method of moving text; most writers find an electronic cut-and-paste routine to be invaluable. In T/Maker III,

**T/MAKER III
fails to provide line-by-line scrolling of the screen.**

programming language: a lengthy list of files and commands can be stacked and the program will load file after file, do the necessary computations and manipulations, and save the results. While this is going on, you can adjourn to another room and fold together a sandwich.

Working with Words

Perhaps the most important of all of T/Maker III's commands is EDIT, which

you must first either transfer the lines of text one at a time to a "buffer" or temporary memory (in which case the lines are removed from the screen) or copy them to

ALIGNING
wedges can be inserted
above the copy to
indicate both the type of
margin and the left and
right margin positions
you prefer.

the buffer (in which case they remain on-screen). Then you must move the cursor to the desired new location, and finally dump the buffer's contents back onto the screen. Since the screen displays everything that is in the buffer, you must remember to clear the buffer before moving anything or your results may not be as planned—particularly because the buffer can hold several hundred lines!

Take special note that text can only be moved as full lines. This is no problem when you're tinkering with complete paragraphs, but you can't pluck out a choice string of bon mots and put them in a more effective position within a paragraph.

What's bad for text is good for tables, however. Although the *T/Maker III* line-moving procedure is no delight in creating manuscripts, it makes rearranging tables and spreadsheets quick and easy. Columns of data can be quickly moved or copied without using the buffer.

Although *T/Maker III* may perplex you if you've ever used another word processor, it allows you to make a smooth transition from old-fashioned typing to modern keyboarding by giving you a choice of three modes of carriage return. The initial default, what you get when you first run *T/Maker III*, is manual carriage return, which works as on an old Underwood or what-have-you. If you don't press the carriage return key before you reach the right margin, the cursor runs into a brick wall. Pressing a two-key combination switches the program to "drafting" mode, which

PLOTCALL GRAPHIC SOFTWARE FOR THE IBM PC

- Plot file generation
- Easy to use

This plot generated by a BASIC program using **PLOTCALL** on a dot matrix printer.

- Plot routines called from any language
- Converts your printer to a digital plotter
- Not another Print Screen program
- ASCII character set rotation & scaling
- Maximum resolution on most dot matrix printers
- Character sets may be altered

gives the automatic carriage return/line feed action, known as word wrap, that is common in most word processors. Selecting another two-key combination elicits a "table" mode that has a nearly unlimited right margin; it is designed for making charts that extend into the widest reaches of computerdom—up to 400 characters wide.

The T/Maker III editor is not completely screen oriented—more precisely, it's not completely paper oriented. Normally, everything you enter is displayed on the monitor single-spaced. Double-spacing of the text, should you desire it, is performed only during printing by use of a command embedded in the text. But, at the point of initial character entry, both margins are preset and unchangeable, and text is displayed ragged-right—justification is not automatic.

YES, T/MAKER
III does do windows.

None of this predetermined formatting is inscrutable. "Aligning wedges" can be inserted above the copy—both on the screen and on the printed output—to

indicate both the type of margin (ragged or justified) and the left and right margin positions you prefer. After editing (or while stepping out of the editing mode for a second), by typing the command ALIGN you will cause T/Maker III to reformat the screen and the data. This approach is actually quite clever: it allows all margin position settings and types (justified, ragged right, centered text) to be permanently saved with the text, and permits all the various types and widths of margins in a single document to be set and saved without having to worry that reformatting will cause disaster. With a proper command, even tab settings will be remembered with the rest of the file—just try doing that with your WordStar.

Additional features of the T/Maker III editor include the "kaystroke macro"; by pressing one button you can put a whole paragraph (or whatever) on the screen. There's also a "frame" mode, which locks part of the screen in place, say the captions, while allowing an area displayed on the screen, called a "window", to scroll up and down through a file of data. (Yes, T/Maker III does do windows.)

Getting It on Paper

Printing is a simple chore. Just give T/Maker III the PRINT command. The program will send the contents of its working memory, or any file, to the printer.

As it comes from the box, T/Maker III is ready to operate the IBM printer, and implement normal, underlined, and bold-face types. The customization notes

THE MAXIMUM possible file length for T/Maker III is 44,000 characters: that's about 16 to 20 pages.

In the Reference Manual include all the information you need to get an IBM/Epson printer to generate its condensed or enlarged typefaces with skinny or normal spacing.

Other print formatting commands are also available, including those for setting paper length, locating the copy on paper, headings, margins, footings, page numbering, forced and conditional pages, and "blocking" text (locking a block of text or a section of a chart so that it will never be split between pages in printing). Pages can be automatically numbered and printed either clean or with the embedded commands displayed in addition to the text. The print procedure can pause to allow paper changes or it can run continuously with tractor-fed paper. Individual pages or sets of pages can be selected from long documents and routed to the printer.

The maximum possible file length for T/Maker III is 44,000 characters: that's about 16 to 20 pages. To produce longer documents, the program's print commands will allow several files to be printed with all pages numbered sequentially—one file can even be printed within another. Other built-in commands allow you to merge address lists into form letters. Elsewhere, this function is called mail merge; with T/Maker III this is included at no extra cost.

Although T/Maker III will automatically locate footnotes at the bottom of pages, it will not automatically number them. The only other feature of WordStar that this program does not provide is "micro-space justification": with this you could add small spaces between letters instead of using only spacing between words to

make the right margin straight. (Of course, the lack of this feature will only be noticed by users with daisy wheel printers capable of producing this effect.)

Unfurling the Spreadsheet

You'll probably find the spreadsheet function of *T/Maker III* to be quite different from any other spreadsheet you've ever run into. The underlying difference is its philosophy.

Most electronic spreadsheets are patterned after the accountant's pale green lined paper, which provides neat columns

and rows forming pigeonholes that numbers can be squeezed into. The various electronic pigeonholes in spreadsheet software are related to one another by strange, abstruse formulae that are privy to but a few who meet on the Witches' Sabbath. The underlying relationships cannot be deciphered by a mere mortal not initiated as an MBA or CPA.

The spreadsheet portion of *T/Maker III* foregoes the pigeonhole structure and works more the way regular people do—all over the place. The spreadsheet is screen-oriented; what you see is what you get. It's an electronic toboloso rasa for calcu-

lations. Rather than filling in the blanks, you type in numbers on the screen wherever you want, using the "editor" as if you were word-processing. You then exit the editor, command *T/Maker III* to COM-

IN EXECUTING
the COMPUTE
command, *T/Maker III*
will straighten
everything up, align the
decimal points, and
chop off digits of excess
precision.

PUTE and await your answers.

Of course, the software demands that you work within some structure. If you want a column to add up properly, there are certain prerequisites that must be followed. For example, your data must be arranged into a table.

T/Maker III requires you to write an "example row," which will tell the program where you want calculations to be performed and the amount of precision you require (see Figure 1). Both the location of the columns of numbers and the number of digits you want to use are specified by typing a row of 9s above each column of figures you plan. The number of 9s and the placement of the decimal point (or the commas in large numbers) in the example number determine the format of all the numbers below it in the columns.

As long as you have all the digits of each entry in a column below the example number, you can be as sloppy as you want when you pile your data in—decimal points and number positions need not line up. In executing the COMPUTE command, *T/Maker III* will straighten everything up, align the decimal points, and chop off digits of excess precision.

Should the number of digits in your final answer, or an intermediary calculation, exceed the number of 9s in the example row, *T/Maker III* will refuse to perform a calculation on the overgrown entry; instead, the program gives you an error

Figure 1: A table created with *T/Maker III*. The example line, highlighted across the top, instructed the program to calculate the totals printed in the far right column. Other totals and averages were calculated according to the operator symbols placed in the eighth-character-wide column on the far left.

The CLEAN command can eliminate all the highlighted material in this figure (the example line, operators, and irrelevant numbers) to produce a more attractive final printout.

TOTAL RECALL™

THE DATA BASE FOR SOPHISTICATED LIST MANAGEMENT APPLICATIONS

TOTAL RECALL - power and sophistication in list management for both the novice user (everything's in 'English') and the computer whiz (extremely flexible).

Simple to understand, fast to learn, and exceptionally easy to use.

You can have this fast and highly efficient program running in less than one hour.

- For customer lists, patient lists, keeping track of prospects (first time called, number of children, etc.), organizing mailing lists to take advantage of Post Office discounts, and many other uses.
- Easy to Understand and Use - IBM® style manual filled with examples and complete 'English' language instructions.
- Complete 'For the Novice' Tutorial.
- Flexible Structure - with TOTAL RECALL you define your own entry format with up to 15 fields, 35 characters per field, plus numeric and date fields.
- Sophisticated List Management - You can extract entries from your list using up to 15 different parameters then sort your list up to 3 levels deep.
- Completely Menu Driven - no special codes to learn, no 'computerese' to wade through.
- Design your own Mailing Labels using your own data plus an optional message line. Prints 1, 2, 3, and 4 across labels.
- Especially easy to use with IBM Fixed Disk and other hard disks. All programs and data can be on the hard disk.
- Automatic retolling on numeric fields.
- Wordstar®-MailMerge®, PeachText®, and other word processors compatible for form letters and custom reports.
- Conversion facility for your existing files.
- DOS 1.1 and 2.0 compatible. Uses standard DOS files. Up to 100,000 records per file using DOS 2.0.
- IBM PC®, PC-XT®, Columbe®, Compaq® and other popular MS DOS machines.
- **\$129.95** Now at ComputerLand and other fine stores

IMAGES-2D™ performs static and dynamic analysis of two-dimensional frame and truss structures on microcomputers.

Dynamic Analysis Using **IMAGES-2D™**

Features:

- Interactive
- Menu Driven
- Full-color graphics
- Deformed structure plots
- Response spectra analysis
- Dynamic animation
- Fully modular organization
- 16-digit accuracy

IMAGES-2D™ is designed for the new generation of 16-bit microcomputers including the IBM Personal Computer and

DEC microcomputers.

IMAGES-2D™ is intended to reduce engineering time and eliminate mainframe computer time. **IMAGES-2D™** is versatile and user friendly. The simple prompts and full "Help" capabilities eliminate most references to a manual. Analyses can be performed in small steps under tight user control, or with one keystroke, can be executed in a batch mode. **IMAGES-2D™** was written, and is maintained and supported by professional engineers. The program is

documented with a users manual, examples, and theory. Separate quality assurance verification problems are available upon request.

IBM PC Hardware Requirements:

- Two Disk Drives (160 or 320 KB)
- 128 KB RAM
- Color/Graphics Adaptor

message that cites the number of "minor errors" and fills the error entry with asterisks. Usually it's a simple matter to go back to the example row, add sufficient digits, and recompute.

The only other restriction of T/Maker III is that your date columns must begin at least 8 columns in from the far left side of the screen. The forbidden columns on the left are used for mathematical operators (plus-signs for addition, hyphens for subtraction, asterisks for multiplication, and slashes for division) and terminators (equals signs, other symbols, and letter combinations for more complex operations, such as averaging, greatest element, and reciprocals). T/Maker III allows three columns of these operators and terminators, so that various computations can involve different rows of numbers. A row without one of these operators or terminators to its left is ignored in computation.

If there is more than one column of figures across the screen, the columns are operated on individually in a sequence from left to right. T/Maker III also can

Business Decision.

Let's be honest.

Despite the "personal computer revolution" in today's office, a lot of business decisions get made in some pretty arbitrary ways.

That's because most of the *software* for personal computers isn't up to the job of helping you draw conclusions from the mass of information in your business.

THE GREAT PERSONAL COMPUTER "UN-REVOLUTION."

Up to now, to use a personal computer effectively in the real world, you needed to use five different types of software packages: Electronic spreadsheet, information management, graphics, word processing, and telecommunications.

You had to learn how to use these five different, unmatched software packages before you could make the computer do what you wanted it to do. And information stored in one of these packages would rarely fit into another without a lot of trouble. This means you had to spend your valuable time pushing buttons and learning to become a computer expert.

Instead of using the personal computer as a tool for business decisions,

Not exactly a shining moment in the personal computer revolution.

THE CONTEXT MBA™

A SIMPLE IDEA WHOSE TIME HAS COME.

The Context MBA is software for the IBM PC, PC-XT, and Hewlett-Packard Series 200 personal computers that combines all the functions you'll ever need - spreadsheet, information management, report writing, graphics, and communications - into a single, easy-to-use package.

The result is a software package that's literally "greater than the sum of its parts."

FIVE SCREENS - NO WAITING.

With the MBA you can connect your personal computer to your company's main computer and retrieve all kinds of business data. Like sales, product, or customer figures.

Sort, search, update, and store this information in your personal computer. Analyze it, prepare sales forecasts or study new business opportunities in

minutes, instead of hours.

While you're using the spreadsheet, use the MBA's graphics function to make spreadsheet figures come alive on your screen in charts or graphs. So you can visualize the effect of possible changes to your business.

This year, or five years from now. Instantly. When you've made sense out of the possibilities, use the MBA's full-function executive report writer to put these words, numbers, and graphs into a finished, printed report.

At last, you can use a personal computer as a decision tool to turn more profit from the mountain of information that crosses your desk every day.

So now even "non-computer people" can make heads-or-tails out of the personal computer revolution.

A GOOD BUSINESS DECISION.

Make a good, well-informed business decision right now:

Call us at 1-800-437-1513 (in California, call 1-800-592-2527), and get the name of your nearest computer store for a live demonstration of the Context MBA. We'll also send you a copy of our tell-it-like-it-is brochure, *Software Explained*.

If you have an IBM Personal Computer, ask for our free *Context MBA Sampler Disk* for a live demo of the MBA on your own PC.

CIRCLE 195 ON READER SERVICE CARD

cypher between numbers in the same horizontal row if operators are put in the example row.

The only big surprise you may find with your first encounter with *T/Moker III*'s electronic spreadsheet is the order in which it performs computations. Rather than following a top-down or left-to-right sequence, it first performs all the addition top-to-bottom on each column—it finishes one column before advancing to the next one on the right. Then it does the subtracting, then the multiplying, and finally the division. Parentheses are not permitted. The manual states, "As we will see, fixing the order of calculation in this way does not pose difficulties for calculation, and, in fact, makes things quite easy to do." I have my doubts; however, because I have not yet worked long enough with *T/Moker III*, I will reserve judgment.

By looking at the screens, you've probably noticed that they show a lot of information besides the data you want to work on. Those columns of operators and example lines could make your printed spreadsheets look cluttered and, shall we say, unprofessional. *T/Moker III* allows a spreadsheet to be stored for future use with all the excess symbols scattered over it, so you can change entries later and recalculate, and it can be printed while adorned this way. But, the spreadsheet can also be "cleaned" and printed out or saved sans the example lines and operators.

Because all information is put on the screen using the same editor as does text, you can decorate your calculations with explanations, obfuscating verbiage, or column and row captions; the editor also can supply lines of dashes, equals signs, asterisks, and slash marks to delineate tables. You are in absolute control of how your results will appear.

Unraveling Lists

List processing is what data base management is all about. By organizing and reorganizing facts and figures, you can suit your exact needs—alphabetizing, sorting by zip code, or just zeroing in on blue-eyed friends. *T/Moker III* makes data shuffling easy. Its organizational functions are not limited to mere lists, however. Anything within the grasp of the program's editor—text, spreadsheet, or table—is fair game to any of the available

manipulations.

In its list processing functions, as with everything else, *T/Moker III* is line-oriented. It can eliminate all lines of a table that do not include desired key words or figures with the **KEEP** command, or it can delete the lines containing the key elements using the **DROP** command. Lines in a table—for instance, an address list or

inventory—can be ordered alphabetically or numerically by using the **SORT** command, with the sorting keyed to any columns you choose (see Figure 2). Or the order of columns common to several lines can be rearranged by the **ARRANGE** command; this can move zip codes from the right side to the left side of a table. With the **TALLY** command, *T/Moker III* will

3-D, ANIMATED COLOR GRAPHICS CAPABILITY FOR

\$69.95

INTRODUCING PC WORLD

An amazing second generation program first featured on Tom Snyder's Prime Saturday TV Show.

It turns an IBM/PC with 90K into a sophisticated graphics system capable of creating animated, three dimensional color images and projecting them in true perspective on the screen. The image can be rotated, moved closer or further away and more!

A powerful screen-oriented text editor, is included to facilitate image formation. "Sketch" your dream house, boat, car or fantasy empire. Then view it as it would be seen from 10,000 feet or zoom in until the screen is filled with a doorknob. Go inside and move from room to room examining furniture placement as the screen rotates within the room.

Images or specific parts of images can easily be saved to disk or printer.

This new updated version of our famous program includes many features not available with the original program.

The editor uses functions keys, block functions, overwrite and insert modes.

The display has nine individually controllable units, an overlay option for composite images, 3D viewpoint macro, keystroke recording for demo drivers and angle entries can now be made in degrees.

Plus other enhancements and options. Manual and tutorial files included.

For a demonstration turn into your nearest PC dealer, today!

count and report the number of rows in which a key element occurs. You can tally zip codes in your address list to determine your prime marketing areas or count up the answers on a batch of questionnaires.

Any number, or any word, phrase, or letter combination can be instantly located

and brought to the top of the screen using the FIND command; or something can be substituted for the sought material using the REPLACE command. T/Maker III will compare two complete files and list any lines that might differ between them when you use the MATCH command.

The contents of a list can also be plugged into blanks in another file using the program's LOAD command. Not only does this permit mailing labels and personalized form letters to be generated from mailing lists, but LOAD also allows a prototype spreadsheet (or "mask") to be filled

T/MAKER III's big advantage is the same as the Swiss Army knife—you only need one tool to do many chores.

in with numbers from several files. Tack on the COMPUTE command and you have a powerful and automatic analytical tool.

Looking at the Graphics

Compared to the 16-color, any-kind-of-chart-that-you-want graphics software packages that are currently available for the IBM-PC, T/Maker III is a minimalist graphics program. It will draw only rudimentary bar charts using standard on-screen or printable characters.

T/Maker III will take numbers from one or more columns and draw from them a simple chart with horizontal bars. The numbers must have been entered using the screen editor in accord with the conventions of its spreadsheet function—an example line is mandatory.

Within those restrictions a limited amount of flexibility is allowed. Any printable or displayable symbols may be used for the bars; the bars may be of any width; the numerical data may be displayed along with the bar chart; and you can add on-screen adornment using the editor. In fact, the chart itself can be manipulated as if it were text—do with it as you please. The graphs can be printed with any printer, whether or not it has graphics capability (see Figure 3).

Although no one will buy T/Maker III strictly for its graphics capability, this limited feature may prove to be handy should the need arise.

Take Your Computer's Commands And Put Them Where They Belong. On Your Keyboard.

PC-DocuMate™ is a documentation template that fits the keyboard of your IBM PC. So the information you want is where you need it. PC-DocuMate templates are professionally designed, logically organized and comprehensive. Each template is printed on both sides on durable, non-gloss polystyrene and is color-matched to your PC keyboard.

PC-DocuMates now available for:

- DOS/BASIC (as shown) • VISICALC™
- WORDSTAR™ • VOLKSWRITER™
- Plus a custom "do-it-yourself" template (includes special pen and eraser)

- MULTIPLAN™ • 1-2-3™
- SUPERCALC™ • EASYWRITER II™
- dBASE-II™

EACH TEMPLATE IS ONLY \$14.95 (includes shipping)

No-Risk, Moneyback Offer: If you are not completely satisfied, return your PC-DocuMate template to us (undamaged) within 10 days for a full refund.

Please send personal check, money order, or credit card information. Foreign orders add \$5.00 (except Canada). No COD's please. Telephone orders: Call 919/787-7703 (at hrs) NC residents add 4% sales tax.

RELATIVE USEFULNESS OF T-MAKER III FUNCTIONS

Figure 3: A bar chart, produced by the rudimentary graphics functions of T/Maker III. The original data was in a table with two columns: the first held the five function names, the other contained a number used by the author to rate the usefulness of each of the program's functions.

The Perfect Program?

T/Maker III is enigmatic. It is different from anything else I've ever encountered, and yet it is familiar in many ways. Once you have it running, you'll probably find it to be extremely versatile, with a happy combination of power and ease-of-use.

On the other hand, T/Maker III resembles most products that claim to be the electronic equivalent of Renaissance man. Although it handles many chores in a workmanlike manner, a dedicated single-application program could be found to perform any one of its tasks more elegantly. T/Maker III's big advantage is the same as that of the Swiss Army knife—you only need one tool to do many chores. It lets you buy an entire system that can handle most everyday problems at a price less than that of a specialized software package that would offer only one of T/Maker III's abilities. But you should always keep in mind that, although a Swiss Army knife will open any can of beans that you want, an electric can opener would open more cans faster (and do a neater job). /PC

8087 SUPPORT FROM MICROWARE

87FORTRAN/RTOS™ is a full ANSI-77 subset with 8087 extensions. It generates in line 8087 code slowing use of all 8087 data types, including 32, 64 and 80 bit reals and 64 bit integers. The complete subset I/O is supported including Internal and External Files and List Directed I/O. Exceptions allow the generation of recursive subroutines, interrupt handlers and can cause interrupts from FORTRAN. 87FORTRAN/RTOS uses the Intel large memory model, allowing data/code structures which utilize the full megabyte. The compiler provides direct access to 8088 ports and supports logical operations on 8 and 16 bit operands normally treated in assembly language. 87FORTRAN/RTOS is ideal for applications which are number intensive or control hardware. 99% of all "main frame" size programs compile and run without extensive editing. The price includes support for one year and RTOS..... **\$1350**

87PASCAL/RTOS™ is the most powerful compiler available to PC users at this time. It is an ISO-Standard Pascal, with 8087-8088 exceptions. These make it possible to use all the 8087 data types directly, while generating modules in one of the three Intel Memory Models. Modules produced using different memory models can be interfaced and linked. This gives the user complete control of the memory model/speed trade off characteristic of iAPX cpus. All exceptions to the ISO definition are clearly marked with a grey background in a manual which is a standard of the industry, and more readable than many tutorials. The compiler makes it possible to cause or handle interrupts. It also reads ports and performs all the tasks necessary to control iAPX-88 hardware. Use of 87PASCAL guarantees you upward compatibility with future Intel processors and languages. Includes RTOS..... **\$1350**

**WE STICK OUR G
THE SUN D**

GRAPHICS WHERE ON'T SHINE.

You'll never see Infocom's graphics on any computer screen. Because there's never been a computer built by man that could handle the images we produce. And, there never will be.

We draw our graphics from the limitless imagery of your imagination—a technology so powerful, it makes any picture that's ever come out of a screen look like graffiti by comparison.

And nobody knows how to unleash your imagination like Infocom.

Through our prose, your imagination makes you part of our stories, in control of what you do and where you go—yet unable to predict or control the course of events.

You're confronted with situations and logical puzzles the like of which you won't find elsewhere. And you're immersed in rich environments alive with personalities as real as any you'll meet in the flesh—yet all the more vivid because they're perceived directly by your mind's eye, not through your external senses. The method to this magic? We've found the way to plug our prose right into your psyche, and catapult you into a whole new dimension.

Take some tough critics' words about our words. **SOFTALK**, for example, called **ZORK® III**'s prose

"far more graphic than any depiction yet achieved by an adventure with graphics." And the **NEW YORK TIMES** saw fit to print that our **DEADLINE™** is "an amazing feat of programming." Even a

journal as video-oriented as **ELECTRONIC GAMES** found Infocom prose to be such an eye-opener they named one of our games their Best Adventure of 1983.

Better still, bring an Infocom game home with you. Discover firsthand why thousands upon thousands of discriminating game players keep turning everything we write into instantaneous bestsellers.

Step up to Infocom. All words. No graffiti. The secret reaches of your mind are beckoning. A whole new dimension is in there waiting for you.

INFOCOM™

The next dimension.

Infocom, Inc., 55 Wheeler St., Cambridge, MA 02138

For your: Apple II, Atari Commodore 64, CPM®/DEC Rainbow, DEC PDP-11, IBM, NEC APC, NEC PC-6000, Osborne 1, TI Professional, TRS-80 Model I, TRS-80 Model III.

TELigraph

The Universal Graphics Tool

FEATURES: Sophisticated graphics in minutes, with 8 colors, 7 shades of gray and almost limitless textures. Graphic objects are macro-definable — Merged graphics and text: 7 character sizes are provided, including all international characters and special symbols. Characters can be colored as well as rotated and located on any pixel of the screen — Full communications facilities for graphic pages. Typical transmission time per screen: 15 seconds at 300 Baud — undistorted graphics printout in up to 5 sizes on any Epson printer (MX80/82/100, models II and III). All aspect ratios are corrected and colors are translated as shades of gray — Extremely compact graphic files: 300 to 500 screens can be stored on a 320 Kb diskette — Highly user-friendly, with full screen help available at any time, for any operation — Extensive & accurate documentation includes

tutorial guide, and reference index. **PLUS:** TELigraph is the full implementation of the NAPLPS-TELIDON World Standard, an elegant and powerful concept for graphics creation and transmission. This standard has already found thousands of professional applications: TV animated commercials, computer assisted education, design, flowcharting, games, etc... TELigraph does not generate a bit image of the screen, but a stream of machine codes that describe the generated graphics. Thus, the graphics you create today on the IBM 320 x 200 dot screen will be fully compatible when you upgrade to our

512 x 512 (or 1024 x 1024) dot systems. Plus, TELigraph allows you to transmit and receive pictures to or from ANY machine or data-base that is NAPLPS-Telidon format — and we're working hard to get the package running on other popular micro and mini-computers.

When we say this is the Universal Graphics Tool,
we mean just that!

The IBM Color/Graphics Adapter can't do it all. Perhaps no single board can. But it's not true that "if you've seen the display from one board, you've seen them all."

Three Alternative Graphics Boards

You may have thought that IBM's pair of video display boards represented the state of the art in terms of capability and function. After all, the monochrome board features a high-resolution character set and character graphics, and the color board boasts its own unique set of graphics and text capabilities. Both use the sophisticated 6845 graphics controller chip. This sophistication, however, imposes certain limitations. The 6845 must be programmed into its different operating modes and requires some different support chips and circuitry if it is to do the best job in a given application. This is why IBM decided to produce two boards.

Even the IBM color graphics board fails to exploit the full potential of its own 6845 chip. This shortcoming explains the development of the aftermarket in graphics boards. Two of the three boards reviewed in this article—Colorplus from Plantronics/Frederick Electronics Corporation and the Orchid Graphics Adapter from Orchid Technology, Inc.—represent the state of the art in 6845 technology and push the chip to its limits. The third board, the Hercules Graphics Card from Hercules Computer Technology, doesn't use the 6845 at all, a courageous break from tradition in the PC arena. Each board has created its own niche in the marketplace. The Hercules bridges the gap between programs designed for the IBM color graphics board

and PCs equipped with only the monochrome display. The Plantronics board wrings the last bit of color graphics performance out of the 6845. Orchid's contribution is a monochrome high-resolution

THE IBM COLOR graphics board fails to exploit the full potential of its own 6845 chip.

graphics card, like the Hercules, but it is unique in the absence of a 6845. All three of the boards come with software packages that make it easy to use the full range of their capabilities.

Hercules and Colorplus

The Hercules board replaces the IBM monochrome adapter. You use it in the same way as the IBM color graphics adapter, except that it hooks up to your existing monochrome display. It retains full compatibility with monochrome programs and provides dramatic high-resolution graphics as well. It responds to the graphic commands in BASIC via a patch program

that appends itself to BASICA. The program intercepts the graphics commands and modifies them for compatibility with the Hercules card. Although the Hercules steals approximately 7K from available memory, the results are well worth it. Furthermore, the routines are available (at an extra \$50) as a library that can be called from any of the compiler languages available for the PC.

We put the Hercules board through its paces in a standard PC and in a Columbia Multi-Personal Computer. It presented no problems in either case. The character set looked just as crisp as that of the IBM monochrome adapter. It also ran well with WordStar and other character-oriented programs. But the big difference came when we loaded BASICA and the graphics overlay. It was a pleasant surprise to see beautiful 720 x 340 graphics on our monochrome display. The BASIC commands for drawing and filling worked as promised. We selected a few games intended for the color board and found that they also worked well, although the graphics were a bit flat without color.

The Plantronics Colorplus board is quite distinctive in appearance. It is a two-layer board made of bright blue fiberglass instead of the usual green. Distinctive as it is, however, Plantronics may have a bit of an identity crisis. The parent company, Frederick Electronics, owns Plantronics,

Both the Hercules and the Orchid are monochrome boards designed to produce high-resolution graphics on a standard monochrome display.

the manufacturer of PC+ products, as well as the Colorplus board (the name of the actual product). To simplify matters, we just call the board the Plantronics around the office; but it's difficult for the user to find a product image or a manufacturer's identity among all those names.

Although the manual claims that the board will fit in one slot, I thought the fit was too tight. Cooling could become a problem, and there seems to be potential for unwanted contact with a neighboring board. The visual performance of the board, however, is dramatic. It offers 320 × 200 resolution on two color planes and provides 16 colors. The quality is sufficient for presenting graphic images such as slides.

The software accompanying the Colorplus, called *Draftsmon*, is exceptional. Using *Draftsmon*, you can draw graphs or charts simply by answering questions and completing entries on the screen. It handles titles, legends, callouts, shading, and scaling. You can provide it with data from the keyboard or direct it to a VisiCalc DIF file or a BASIC comma-delimited file for input. It will use the data to complete a bar or pie chart or a line graph.

Draftsmon allows you to draw and color virtually any polygon or group of polygons on the screen. It even allows you to "write" in longhand on the screen by moving the cursor and setting dots as you go. Perhaps the greatest advantage of *Draftsmon* is that it allows you not only to direct the output to a standard Epson printer, but to a Hewlett Packard plotter such as the 7407 as well. We used the HP

THE VISUAL
performance of the
board is dramatic.

as the output device and the results were gratifying. *Draftsmon* also tells you when to change pens, so what you see on the color screen will be what you actually get on the plotter.

Another interesting feature of *Draftsmon* is its "slide show." In this mode, images are stored on disk. As you display each image, the next one is loaded from

the disk into the alternate page of memory. You then receive the next slide instantly and Draftsman loads the following slide in the series while you are viewing the current one. It will also back up using the same technique. In a word: slick.

A Powerful Flower

Orchid, like the Hercules, is a monochrome board designed to wrest maximum graphics resolution from the standard monochrome display. As mentioned earlier, there is no 6845 CRT/Graphics controller on this board; all the functions are performed with small chips. This is not to say that it is lacking in technology, although Orchid seems to have a vested interest in guarding the secrets of how the board is constructed. In fact, the identification "branding" has been sanded off a number of the chips. The layout of the board is deceptively simple, as it is a multilayer construction instead of the usual two-sided printed circuit variety.

All tech snooping aside, the Orchid retains the high quality we have come to expect from the monochrome monitor's character set. It provides 720 x 350 resolution, the maximum available from the display. Best of all, it includes a software package called Holo that makes the graphics easy to use. Holo is a series of routines written in assembly language to support extended graphics. In addition to the more commonplace draw, flood, and fill functions, Holo makes it easy to move shapes around the screen, detect collisions, and pass one shape over or through another. It will manage the shape properly even if you steer it off the edge of the screen and back on again. Holo provides a number of sophisticated ways to fill or flood shapes and it will probably be able to support full color operations someday, though it is currently available only in monochrome. It even provides font manipulation instructions that allow you to put custom text on the screen and control its size and orientation. (Text can be vertical, upside down, backward, or in any orientation you wish.)

Holo is compatible with BASICA, as well as any of the compiled languages available on the PC. Although the documentation, we received was marked "preliminary," it was complete and provided good examples. Nevertheless, a few more illustrations would have helped. Holo

The Plantronics board offers 320 x 200 resolution on two color lines and provides 16 colors.

PODLASERIUM™

NEW
VERSION
2.0

We are pleased to announce the release of the most exciting and challenging arcade game ever written for the IBM PC, PODLASERIUM Version 2.0.

The ideas for the improvements are not our own, but those of the purchasers and reviewers of versions 1.0, 1.1, and 1.2. We called and listened to a large number of users, took the best ideas, and created a game that even the programmer who wrote it can't beat!

In fact....

If you are the first person to obtain a FINAL SCORE greater than 40,999 we'll send you a cashiers

check worth \$50.00 (fifty U.S. dollars)

If you are the first person to obtain a FINAL SCORE greater than 99,999 we'll send you a cashiers

check worth \$100.00 (one hundred U.S. dollars).

VERSION 2.0 FEATURES....

- Aliens deposit PODs at a rate ten times faster than in Version 1.2
- The POD MISSILE so easily avoided before, is a deadly menace that must constantly be reckoned with.
- Squadrons of Alien Reader Ships attempt to steal your fuel as they cross hemispheric zones in varying numbers, differing directions, and changing speeds
- You can fire up to five shots at the same time
- More sounds, more color (on color monitors), more action.

Will your name be added to the permanent list of Top Ten Combater's? (the universe must be saved!)

DOES NOT REQUIRE COLOR GRAPHICS MONITOR ADAPTER INTERFACE

IBM PC DOS, 1 Drive, 80 Col. Display

NOTE: Purchasers of earlier versions, send your original diskette along with \$1.50 for postage and handling and we'll send you PODLASERIUM Version 2.0 FREE!

also supports dumping a screen image to an Epson or an equivalent printer. One word of warning, however. Although you can store Holo images on disk, they are stored in a format incompatible with the PC file system. Holo reads and writes full tracks by track number, which makes for very fast loading and unloading (no directory access time or sector allocation schemes), but you would be foolish to mix Holo images and PC-DOS files on the same disk. The best thing to do is to reserve one disk just for Holo images. If you don't follow this advice, you will probably destroy a good deal of software while trying to save Holo screens.

By contrasting the three boards, you can see why each has its own place in the market. Although there is some overlap in function between the Hercules and the Orchid, the accompanying software makes each unique. As for the Plantronics board, it is in a class by itself in terms of color quality. All three represent the top of the line in graphics boards and provide stiff competition for IBM. /PC

Requires: Monochrome monitor, 64K, two disk drives.

Amdek's new business system meets your graphic needs

Amdek's Business System is designed to allow your IBM/PC to do more for you. This graphic system can document your data with pie, bars, horizontal bars, lines, points, areas or any combination of professional looking graphs.

THE SYSTEM

HARDWARE

- Amdek Color II High Resolution Monitor
- Amdek Model — DXY Plotter
- Amdek Multiple Adapter Interface Board

SOFTWARE

- BPS Business Graphics™

OPTIONAL HARDWARE

- Amplot II Plotter — Automatic, 8 Pens
- Amdisk III — 3" Microfloppy Disk Drive System

The system is designed to save you time and money, and to make the computer work for you.

Here's how it works: The computer's data appears on the Color II monitor and the Model DXY plotter will recreate the screen on a 10" x 14" format using the BPS Software.

It's easy to use — the system interfaces with the most popular software packages, including Lotus 1-2-3, dBase II, VisiCalc, SuperCalc and WordStar. And it understands English, so there's no need to learn any foreign computer languages. It's fast — charts can be produced in about two minutes. It's powerful — the system with the MAI board will more than double the memory capacity of your computer. It's economical — the Amdek package will save you over \$600 on the individual components.

Now you can make sophisticated graphic presentations to your clients, customers and colleagues using your Amdek Business System.

Say "Good-bye" to Planned

Introducing The SandStar™ Series — The First Modular Peripherals For The IBM® Personal Computer.

Now Maynard Electronics, a recognized world leader in peripheral technology, introduces the SandStar™ Series — a major breakthrough in IBM-compatible peripherals. With an almost endless range of modular capabilities, you can now add functions as you need them. And as new components are created, the beauty of SandStar™ Series Cards and Modules is that they will never obsolete themselves. Their flexibility will allow you to add and interchange modules for years to come.

SandStar™ Multifunction Card

This card can really help you to extend the range of your IBM Personal Computer. The module locations allow you to configure your card with as many as six SandStar™ Modules. As with all SandStar™ Series Cards, all modules function independently.

SandStar™ 5¼" & 8" Floppy Drive Controller Cards

Now you can control up to four 5¼" floppy drives with the 5¼" Floppy Drive Controller Card. The 8" Card is engineered to the same specifications with the exception that it controls two 8" drives externally.

SandStar™ Game Adaptor Module

Both Cards will accept up to three SandStar™ Modules.

SandStar™ Cable Bracket Module

Playing your favorite game is now easier than ever. Up to four paddles or two joysticks can be attached. Also, the Module can be used for input with four digital inputs and four analog inputs which are useful for general purpose graphic applications. It uses the same type 15 pin "D" subminiature I/O connector as the IBM Game Control Adaptor.

SandStar™ Cable Bracket Module

The SandStar™ Cable Bracket Module is designed for easy connector mounting of the SandStar™ I/O Modules. It allows you to cable all modules from the back of the card itself without any troublesome jury-rigging.

SandStar™ Multifunction Card

SandStar™ 5¼" & 8" Floppy Drive Controller Cards

Obsolescence!

SandStar™ Memory Card
Expand your total system memory from 64k bytes all the way up to 640k bytes using only one card slot! As shown here, any three SandStar™ Modules can be added when and if you want them in whatever configuration you choose.

SandStar™ Memory Module
With this module the SandStar™ Memory Card can be expanded for a total of 640k bytes of system memory while using one IBM expansion slot. The Module may be purchased with any 64k byte increment.

SandStar™ Parallel Port Module
This port is a Centronics™ compatible I/O port which may be used to connect a printer or used as a general purpose I/O port. IBM diagnostics will run on this module.

SandStar™ Serial Port Module
This module is totally compatible with software written for the IBM Asynchronous Adapter and may be used to connect to a MODEM, serial printer or any device using a standard RS232-C interface. The port may be configured as Serial Port #1 or #2.

SandStar™ Clock Calendar
This module automatically loads the correct time and date each time the system is powered up. The clock is powered up and calendar are equipped with battery back-up and will run even when the power is turned off or the unit is unplugged. Software included.

SandStar™ Memory Card

SandStar™ Game Adapter Module

SandStar™ Cable Bracket Module

COMPLETE COMPATIBILITY
All SandStar™ Cards and Modules are designed to be 100% compatible with IBM hardware, operating systems, high level languages and diagnostics. They all come with a one-year repair or replacement warranty and are ready to ship with complete instructions for easy installation.

PRICED RIGHT!
All SandStar™ Series Cards and Modules are competitively priced. In the long run, the SandStar Series will save you money.

ASK YOUR DEALER
Look for the SandStar™ Series wherever quality computer products are sold. If your dealer has not yet discovered the peripheral revolution engineered by Maynard, tell him to call us. Watch our ad for new additions to the SandStar™ family.

We make modern times better.

COLORPLUS™

Shatters The Mold.

A vibrant, varied new world of color is now at your fingertips.

We've shattered the mold for color graphics adapters with COLORPLUS, a high resolution, full color breakthrough fully compatible with IBM Personal Computer hardware and software.

COLORPLUS produces incredibly sharp, detailed multi-color graphics of professional quality at a low PC price. Its state of the art biplanar technology enables high resolution 4 color 80 character graphics or medium resolution 16 color 40 character graphics.

The current IBM PC capabilities of high resolution 1 color 80 character graphics and medium

resolution 4 color 40 character graphics simply pale in comparison, now that the era of COLORPLUS has arrived.

Using only a single expansion slot, COLORPLUS includes an integrated parallel port, thereby saving you an expansion slot for future needs. No modification is required to existing software in the IBM modes. Enhanced software supporting COLORPLUS Graphics capabilities is currently available from major software suppliers.

For over 31 years, Frederick Electronics Corporation has developed high quality electronic equipment world-wide. The key to

our success is our international reputation for customer support. PC+ products will continue in this

tradition. Frederick Electronics Corporation is a subsidiary of Plantronics, Inc., a publicly owned company listed on the NYSE as PLX.

The goal of PC+ products is to expand your options, to make your personal computer more valuable and productive. COLORPLUS is just one example of our commitment to that objective. Contact us for the name of your nearest COLORPLUS dealer.

WHY PIONEER BUYERS OUR NEW \$49.95*

by JIM EDLIN, PRESIDENT BRUCE &

Pioneer customers for our new Wordvision™ writing tool program for IBM personal computers are telling us they love it. Here's a sampling of what they say:

"Three days ago your PIONEER WORDVISION came and it was like stepping from fog into sunshine."
MINISTER/PHOTOGRAPHER
MODESTO, CA

"I recently acquired [bleep] and I have had difficulty in mastering its multitude of commands. WORDVISION appears to supply all of the features that I would normally use, is much easier to learn to use, and costs 1/10 the price."

ENGINEER
DEKALB, IL

"I coordinate the acquisition of small computers for my company. I've been looking for a word processor that can run on the IBM PC

yet be easy to learn. You may well have it!... WORDVISION is remarkably easy to use (especially after spending hours with [bleep] and all its infernal control keys). Your user friendliness and screen presentation does not have an equal in any other word processing software... [Bleep], [bleep], and [bleep] watch out—the new kid on the block is likely to take over."

SENIOR SYSTEMS ANALYST
ROCHESTER, MN

"My daughter is 14. She does much of her homework on the IBM now that WORDVISION is available. The simplicity of use is there but so is the depth needed to make the system valuable."

SALES REPRESENTATIVE
GARDEN GROVE, CA

"Once having discovered its many features and conveniences I doubt seriously that anyone would not make it their first choice of a word processor."

RETIRED BANK VICE PRESIDENT
SHREVEPORT, LA

"I LOVE WORDVISION (And I have both [bleep] and [bleep].")

WRITER
BERKELEY, CA

"Overall, I am impressed with the quality of the package. Its current features are exceptional at this price and the way they are implemented is exceptional at any price... WORDVISION should surpass all competition."

SCHOOL SYSTEM ADMINISTRATOR
CINCINNATI, OHIO

"I really like the screen layouts. They are neat, informative and easy to read. The program is also very fast, and that is appreciated.

The innovations... represent a real improvement over what I've seen in other programs."

COMPUTER CONSULTANT
CANOGA PARK, CA

"The ease and logic of your program is first rate."

CONSULTANT
SAGAMORE HILLS, OH

"Perhaps the greatest feature of WORDVISION is the lack of control commands. Everything is done with excellent screen prompts and no evidence of the complexity of word processing left to diminish the enjoyment of seeing words appear before your very eyes."

IBM EMPLOYEE
HOPEWELL JUNCTION, NY

What the press is saying:

The outstanding example of... the excellent low-cost software I saw at Comdex."

STAN VUIT
COMPUTERS & ELECTRONICS

"Microcomputer software is in the midst of taking a major step forward. Three new products are responsible: VisiCorp's VISION, Apple's Lisa, and Bruce & James' WORDVISION."

STEWART ALSOP
ISO WORLD

"I state unqualifiedly that it is the most value you'll ever get for \$50.00, and maybe for five times that amount as well!"

THOMAS V. BONOMA
MICROCOMPUTING

WE LOVE WORDVISION, A WRITING TOOL.

JAMES. PROGRAM PUBLISHERS INC.

We love it after only four days."

PHYSICIAN AND ADMINISTRATOR
TLMPL AZ

I am very impressed. You have the potential to scoop the word processing market. (IPS Within 18 months, my company will purchase up to 500 PCs for word processing.)

MANAGER
SANDY UT

WORDVISION is a SUPER program. In fact, \$49.95 may not be the right price. I think it's worth more."

ACCOUNTANT
MONTICELLO IL

"All in all this program is a great value, and I thank you very much for selling it at such a low price."

REAL ESTATE MANAGER
ROCHESTER NY

I was literally using it effectively after about 15 minutes. . . It is clear that it will be my standard PC word processor and that I will recommend it to my friends and colleagues."

COMPUTER CONSULTANT
PACIFIC PALISADES CA

Outstanding, versatile product."

ACTUARY
PASADENA CA

I like it very much since its simple, one-keystroke functions are so much better than the [bleep] program that I have used for about 8 months."

PHYSICIST
CHATSORTH, CA

With your approach to the market it should sell, sell, sell."

WRITER/TRANSLATOR/EDITOR
MADISON WI

I started being comfortable with the program after about an hour of 'hands on' and haven't had the manual back out since the 3rd or 4th hour. Frankly, my intention in ordering WORDVISION was . . . to tide me over until I could decide what I really needed. But . . . I'm going to have a hard time going elsewhere."

SECURITY MANAGER
FAIRPORT, NY

I saw a demonstration of WORDVISION and would like to obtain a copy. I was told a copy costs \$50, which I find hard to believe considering the capabilities of the program."

SYSTEMS SPECIALIST
HONOLULU, HI

This is the first word processing program I have ever used. It was easy to learn to use, and the color made it seem like a game. I wake up thinking about what I can do with my WORDVISION rather than how to get through Zork III."

STUDENT/HOUSEWIFE/VOLUNTEER
BELLEVUE WA

♥ About WORDVISION and our Pioneers:

WORDVISION for the IBM Personal Computer is the first in a line of "people-literate" low-priced programs from Bruce & James. Our Pioneer Corps is a group of more than 900 customers who bought advance copies of WORDVISION under a special offer. Any Pioneer who first alerts us to a problem we fix, or makes a suggestion we use, gets a full refund.

We've received 209 replies from Pioneers as of this writing, most of them thoughtful and thorough, many running to a half-dozen pages or more. The comments here are drawn from them (The writers' names, addresses and complete comments are on file at our offices.)

There are many good reasons for WORDVISION's low suggested retail price, but compromise is not one of them. Visit your bookstore or program retailer soon to see what our Pioneer's liked. And what they suggested. (If you can't find a copy in your area, call 614/766-0110 for the name of your nearest dealer or to order direct by credit card.)

Mark of the Unicorn

An amphibious arcade favorite adapts well to life in the PC-environment. Other games offer you command of Fort PC and a graduate course in pinball wizardry.

Fun With Frogs And Flippers

This month we introduce the PC Magazine Game Rating. We award points, on a scale from one to six, for three categories: Fun value, which needs no explanation; Challenge, a measure of the skill required and the likelihood that a player will return to play again; and Graphics/Sound, on assessment of how well the game exploits the PC's possibilities.

Frogger

Sierra On-Line Inc.
36575 Mudge Ranch Rd.
Coarsegold, CA 93614
(209) 683-6858

List Price: \$34.95

Requires: 64K; one disk drive; color/graphics adapter; RGB, color, or monochrome monitor; (joysticks optional).

CIRCLE 693 ON READER SERVICE CARD

Why did the froggie cross the road? Heaven knows, there were rampaging trucks and out-of-control cars zooming every which way.

And then, why in the world would the froggie want to cross the river? Oh, sure, there are some hospitable logs on which to hitch a ride, and even a few friendly turtles willing to offer a floating platform. But watch out—there are snakes on the logs and the turtles sometimes decide to dive below the water. And there are voracious otters and hungry crocodiles. All this

to get to a lily pad on the other side?

Whew! It's exhausting just to think about it. And think about it you will when you let Frogger into your home. This is a first-rate translation of an arcade favorite, complete with music, sound effects, and carefully crafted graphics. On an RGB monitor, the display is stunning, with

action on every part of the screen. The game is also playable on a monochrome monitor attached to the color/graphics adapter board.

The point of the game is to maneuver your frog from the bottom of the screen to one of five lily pads at the top. You have to zig-zag between five lanes of traffic in the

At this point in Frogger, the red frog is about to leap off the logway onto the river bank. Can he reach a lilypond on the other side?

QUALITY IBM PC SOFTWARE

Info-SORT™ \$95

Fastest Sort/Select package for the IBM PC. Sorts 1,000 records in less than 10 seconds. This high performance package is written in Assembler language and can be used as a stand-alone utility or integrated with your existing application system. Select capabilities include multiple independent key and conditional selections with updated sort parameter flexibility.

Info-GEN™ \$245

Easiest to use record management package for the IBM PC. Allows the user to define files, data entry and update screen formats, calculations, record selection criteria, labels, reports, and special forms. A complete menu driven application can be generated quickly — without programming. Records can be accessed in less than 2 seconds by up to 10 primary keys.

Info-REPORTER™ \$125

Most comprehensive report writer for the IBM PC. The easy to use report image display allows desired reports to be quickly and easily generated. Report information may be accessed from up to 4 related files, in sequence or sorted. The report definition function provides a full range of features including multiple headings, detail lines, calculations, sub-totals and totals. Interfaces with Info-GEN or your BASIC data files.

CIRCLE 276 ON READER SERVICE CARD

first challenge; the traffic alternates direction and moves at varying speeds. Halfway across the screen, your frog reaches the river bank. Here you must arrange to have your frog jump onto passing logs and turtles en route to the lily pads.

The game is by no means easy. It should appeal to all age levels. And perhaps best of all, it is not a shoot-em-up or a

THE ZIGS AND zags of the frog are accompanied by a nice little hopping sound.

beat-em-down game. The zigs and zags of the frog are accompanied by a nice little hopping sound; a mishap with a truck yields a splat noise, and a bounce into the river produces an audible splash. Frogger even has its own theme music to accompany the frog's first appearance on the screen, transitions to higher levels of play, and his final passing. I played the game enough times to get tired of the music pretty fast, and was happy to find I could dispatch it with the F7 function key.

The game can be played from the keyboard—with user selectable keys for up, down, left, and right—or from a joystick. I much preferred playing from the keyboard, which had considerably faster action. I defined the movements to be directed by the up, left, and right arrows on the keypad, with the space bar ready for beating a froggie retreat.

The game can be paused during play, the background and foreground colors can be changed at any time, and there are three levels of play: normal, advanced, and expert. The program is copy-protected and uses its own operating system; I was able to run the program on the Compaq portable as well as on the IBM PC.

Frogger appeared to be well-constructed, with two minor exceptions. The registry of high scores seemed to occasionally overlook a new record, for reasons I could not discern. Also, the transition from the high score board into a new game sometimes took repeated punches of the escape and return key.

That notwithstanding, a hopping good

NOW!

GET IBM-PC Capacity at a Fraction of IBM's Price!

New **NETRONICS 16 BIT EXPLORER 88-PC KIT**
Starts at Just **\$299.00** - Accepts All IBM Peripherals.

It's true! Now you can enjoy the power of the IBM 8088—the same microprocessor which powers the IBM PC—and the key program to use the IBM PC—starting at only \$299.00!

Take this easy, low cost way to learn 16 bit technology! Two-board system features:

1. 8088 mother board with 256K 2-upboard logic, accepts any hardware designed for IBM PC;
2. 844K memory board, expandable to 256K; with IBM compatible 85232 communications card port.

Any disk operating system which works on the IBM will work directly on the EXP 88-PC. And all programs compiled for 80, IBM will run on it.

The system monitor ROM included in the Starter system features a near-instantly operating system that allows easy program generation and debugging. The commands include display/memory, display/memory registers, hexadecimal data to 160 points, block memory, single step trace mode, gates with optional breakpoint and register reports, cassette hardware with the IBM, plus a complete system test program that tests and reports condition of ROM, RAM, cassette interface, timer, DMA controller, interrupt controller, and the communications port. These test programs not only allow easy debugging of software but they serve as hardware and software learning tools.

The EXPLORER 88-PC STARTER KIT includes a mother board, memory board, all components needed, except for IC's used, one 80 pin bus connector and complete assembly/test instructions. All you need is a soldering iron, solder, a power supply, and a standard 85232 terminal (electronics has 2 low cost ones to choose from).

Explorer 88-PC Starter Kit... \$299.00
• 160.00
• (cable & test kit) add \$100.00
• 80 pin bus connectors at \$4.25 ea
• 1.00 pb.

Use your IBM terminal with the EXPLORER 88-PC or, if you plan to expand it to be fully IBM PC compatible, we offer our IBM compatible keyboard and an IBM compatible color graphics board (only available wired and tested).

List Price: \$29.95

Requires: 48K, color/graphics board, color or monochrome monitor, (joystick optional).

CIRCLE 692 ON READER SERVICE CARD

John Wayne, meet Charlie Chaplin. Paratrooper is a shoot-em-up game at "Fort PC." You are commander of a fixed gun emplacement with a moveable turret. Overhead come helicopters dropping paratroopers—first one at a time and then in swarms. You've got to shoot down the helicopters or failing that, massacre the

helpless paratroopers as they fall to the ground. Oh yes, there are jet planes with bombs, too.

If four troopers land on the ground unshot, they creep toward your emplacement. Crouching at the base of the gun, they scurry to stand on each other's shoulders in order to reach up and plant a bomb

FOUR TROOPERS
scurry to stand on each
other's shoulders to
reach up and plant a
bomb to destroy your
gun.

to destroy your gun.

This is a well-executed but unexceptional game. The graphics (with very pretty explosions and cute little parachutes) and sound (including the stirring strains of Bach's Toccata and Fugue in D Minor at boot-up) are quite nice, but Paratrooper

telemath

Math Reinforcement Software

Available for:

IBM PC	APPLE II
*1 Disk Drive	*1 Disk Drive
*Color/Graphics Board	*DOS 3.3

VALIDATED SOFTWARE

Telemath was validated as being effective in helping students learn Mathematics in the San Diego Unified School District as early as 1978. It has been in use in California schools ever since.

80 ARCADE-STYLE PROGRAMS

Through special options, the 80 Telemath programs meet 148 basic Math objectives, grades K-8. The video arcade format of each unique program maintains a child's interest while stimulating achievement.

TAKE YOUR PICK

The 80 programs come packaged 40 per Volume, in a two Volume set. Forty of the Telemath programs are designed to operate with a standard IBM PC or Apple II/IIe computer. These 40 programs are available, 4 programs to a disk, in ten individual packages. In either case your cost will be \$10.00 or less, per program.

TRIAL SIZE

Look for our Trial Size package through your local dealer. For only \$10.00 you get two of our programs to use in your own home or school environment.

TRY TELEMATH!

We know it can help your children learn Mathematics skills.

quickly loses its appeal after a dozen or so plays. I found it frustrating that there was no way to kill off the troopers once they land on the ground—the gun is fixed in place and cannot fire below an angle of about 50 degrees.

Orion Software is also the distributor of PC-Mon, a well-done remake of Poc Mon. This company obviously has the ability to produce fine products—but it could use a healthy infusion of creativity and originality.

YOU'VE GOT to shoot down the helicopters or massacre the helpless paratroopers as they fall to the ground.

Night Mission Pinball
SubLogic Corp.
713 Edgebrook Dr.
Champaign, IL 61820
(217) 359-8482

List Price: \$34.95

Requires: 64K, color/graphics adapter,
color or monochrome monitor.

CIRCLE 691 ON READER SERVICE CARD

I now know what it is like to unpack a child's sandbox toy, only to find a 62-page technical manual that begins with, "Turn on power to oscilloscope."

Night Mission Pinball is not a mere pinball game. It is also not another "Bombing Run Over Berlin." So much for the easy part of figuring out this game. This program is a strange combination of game and graduate physics lesson. The four-page instruction manual is straightforward enough, presenting a way to start playing the game with its variables set to

default values. But then there's an 18-page "adjustment manual" which offered me the power to set any or all of 36 different parameters for the game—and I probably missed a few adjustments.

I should have expected this devotion to detail from Bruce Artwick, also the designer of the extremely popular Flight Simulator game (distributed by Micro-soft). But Night Mission Pinball is still a pinball game at heart, and at first I felt I was the victim of massive overkill.

Here are some of the simpler variables left open to the user:

BALLS PER GAME—from 1 to 99. A reasonable choice.

FREE GAME SCORE—from 0 to 999,999. One way to extend or shorten the game time.

BALL SPEED—Again, a reasonable kind of adjustment.

Now, you may have noticed that these three variables are often the ones automatically adjusted by programs that allow the user to select novice, intermediate, and expert levels of play. But Artwick did not stop there. Try a few of these variables:

FORWARD INCLINE—To put it another way, the amount of gravitational force.

FLIPPER POWER LEFT AND RIGHT—A range of 128 values.

RESTITUTION—A control over the "overall bounciness of all bounce surfaces (except the flippers.) High values correspond to a restitution coefficient of nearly one (totally elastic bounce.)"

NIGHT MISSION Pinball is a strange combination of game and graduate physics lesson.

LEFT V THRESHOLD, VELOCITY X, VELOCITY Y, AND RIGHT V THRESHOLD—Control over the kick given the ball by the "impulsers" located in the pinball chutes.

And, yes, this computerized pinball machine even expects—and reacts to—body english. Bumping the machine by striking keys on the left and right sides of the keyboard can jostle the ball on the screen. Bumping too hard, as every pinball wizard knows, can result in a game-ending "TILT." Night Mission Pinball

Night Mission Pinball has little to do with flying, but lets you do a lot to change the odds of pinball.

allows you to set the program's sensitivity to tiltable offenses.

Well, as I said at the beginning of this review, I was at first mystified by the purpose of this product. I'm still not sure why the company felt the need to add the "Night Mission" element. In playing the game I never really paid any attention to the static picture of the bomber on the right side of the screen or the military notes appended to the pinball board: the

A MINOR change in the mathematics of a game can have vast effects on its playability and challenge.

ball chutes and tunnels are called the "bomb release line" and some of the various exte-point lights on the screen are identified in the manual as being cities to be "bombed." Why must everything become a shoot-em-up?

However, I eventually began to look at this product in a different way. I saw it as an educational tool that allows the user to understand a bit about the complexity of a video game. You won't learn how to program, since the game is written in copy-protected assembly language, but by experimenting with the variables you should be able to understand a bit about how a minor change in the mathematics of a game can have vast effects on its playability and challenge.

The game itself is not very challenging, and not all that much fun after a couple of playings. In fact, I felt that *Flipperball* (reviewed in PC Magazine Volume 1 Number 12) was a better representation of the physics of a pinball machine. *Night Mission Pinball*, though, should have great appeal to the tinkerer.

The dBASE WINDOW 30 DAY, NO SEAL, DEMO DEAL

Tylog Systems, Inc. is proud to announce the first true 30 day software trial period. There are a few consumer oriented software companies that offer 30 day trial periods on their products. However, these products are usually sealed or crippled in some way that makes them good only for a demonstration.

By using the dBASE WINDOW application generator, you can create dBASE II record keeping applications twenty times faster than programming. Just draw your screen and report formats and the dBASE WINDOW will create your application for you. The dBASE WINDOW is much more than a program generator. It will generate the whole application, right down to the documentation.

Compare the features of the dBASE WINDOW with any program generator.

- Any number of databases in an application
- Up to 5 indexes per database
- Interactive queries
- Built-in powerful report generator
- Password security system
- Two databases in one report
- Import and export data from and to CP/M or PC-DOS files
- Automatic disk search for files
- Easy modification of databases and applications
- Add custom code if required

You can have many databases in complex relations with each other as in the following diagram.

Now when you order the dBASE WINDOW you will receive a disk that is not crippled or sealed in any way. Try it out for 30 Days. If for ANY reason you don't like it, return it and you will get your money back (less shipping).

Requirements: CP/M & dBASE II 2.3b; or CP/M-86 or PC-DOS & dBASE II 2.3D. 400K or more disk space required.

The dBASE WINDOW is \$249.00, manual only: \$20.00 (manual price will be credited to a future purchase of program.)

Tylog

Tylog Systems, Inc. 9805 S.W. 152 Terr., Dept. PC, Miami, FL 33157
(305) 253-5942

To order: Call today or send check, full name and address, telephone number and disk format. Credit card buyers send card number and expiration date. We accept C.O.D., VISA, Mastercard and prepaid mail orders. Add \$4.00 for shipping except for prepaid mail order for program. Florida residents add 5% state sales tax.

NOW, when you buy software from

you can  **THE BARD SOFTWARE PUBLISHERS & DISTRIBUTORS**

WIN A DREAM VACATION IN HAWAII!

HERE'S HOW IT WORKS:

1. When you make a software purchase from the BARD, for each \$50 worth of software that you purchase you are entered one time in the WIN A TRIP TO HAWAII contest, (e.g. buy \$100 and you are entered twice, buy \$300 worth and you are entered six times, etc.)
2. On September 1, 1983, a winner will be selected from the pool of entries and notified.

HERE'S WHAT YOU WIN:

1. Round trip, FIRST CLASS air fare for two from your home town to Honolulu via UNITED AIRLINES (or other airline if United does not fly to your home town).
2. Two weeks LUXURY ROOM at the HILTON HAWAIIAN VILLAGE Hotel in Honolulu.
3. Two weeks free use of a MERCEDES 380 SL convertible supplied by Hertz Rent-A-Car.
4. A few surprise extras.

THE BARD strives to give you the best values and lowest prices in software purchases. Now, the BARD gives you an added plus which none of our competitors can match - the chance to win the dream vacation of a lifetime when you purchase your software from THE BARD.

ALL STATE AND FEDERAL TAXES ARE THE RESPONSIBILITY OF THE RECIPIENT. PARTICIPANTS MUST BE 18 OR OVER TO ENTER. VOID IN STATES WHERE PROHIBITED BY LAW. ENTRY AVAILABLE WITHOUT PURCHASE. CONTACT THE BARD FOR DETAILS.

TRIP MUST BE TAKEN NO LATER THAN JUNE 30, 1984.

VisiCalc® was a swell idea for then.

The next generation. First generation electronic worksheets were a good idea. They were early software management tools that could eliminate a lot of hours with a spreadsheet, calculator, pencil and eraser. Enter Multiplan, the next generation electronic worksheet that's as easy to use as it is useful.

Make comparisons. Compare Multiplan to any of the earlier electronic worksheets. We've given you some "prompts" above.

Compare learning time. Multiplan's tutorial book brings you up to speed. Fast. But Multiplan doesn't stop there. Multiplan's On-line Reference Guide gives you instant help if you have questions. It knows where you are in Multiplan and offers information related to your problem, right on the screen.

Compare ease of use. All Multiplan prompts are full length words or phrases. And Multiplan provides "naming," the ability to assign a plain English name to any

cell or area. "Gross Profit = Sales—Cost" rather than "AA44=A223—BK154." Which means you can work more intuitively. And faster.

Compare reports. Multiplan lets you link related worksheets so that information is transferred between them automatically. For instance, you can keep regional sales forecasts on separate sheets but link them with your overall company forecast. Then, just change the forecast for any region, and the company forecast sheet is updated automatically. Something you can't do with first generation worksheets.

Compare ease of use. Not just the work you can do, but the way you can present it. Multiplan's flexible formatting options allow you to produce presentation-quality reports. And its sorting capability lets you sort by either alphabetic or numeric order. So a sales manager who normally lists sales regions alphabetically could sort by amount sold and conveniently rank by sales performance. The

DataVu™

A Complete Information Management Facility

Here's What They're Saying About Us

"Thank you!! for DATAVU. After spending hundreds of dollars and hours on DBASE 11, Condor and other DBASE systems, with little or no results in applying them in my business I feel that DATAVU is a SUPER DBASE system that can be implemented by any small business."

James E. Proctor

President, Valcom, Inc., White River, VT

"The menu generation is good enough to be sold by itself. . . relational data base itself is one of the most powerful I've had the pleasure to use. . . one of the finest pieces of software available today. You can't beat the price. . .\$149.00."

Scott M. Baker

Assistant Manager, Heathkit, Jericho, NY

"The problem seems to be that at \$149, 'how can it be good'? Take it from a programmer, it beats those Data Base Manager Systems that are priced over \$500. (no need to mention names)."

Emie Johnson

Stanford Software System, Minitou Springs, CO

After experimenting with and using 10 to 20 microprocessor based databases over the last few years, I have finally found the most powerful and cost-effective tool available to the micro-computer user.

Tom Potter

Roseville Computer Store Roseville, Michigan

Automatic Screen Design (ASD): This feature permits you to specify the design of a form (which may be multi-page) that you wish to use for data entry and data viewing. You simply layout a screen mask and within seconds, without any programming, a data entry program can be generated.

Automatic Menu Generation: This feature permits you to design your own menus in which each option in the menu may invoke an executable program or a batch file. You simply layout the menu pages, and within seconds, without any programming, your menu program can be generated. This allows you to construct user-friendly menu-driven packages.

Relational Data Base Management: Having established data base(s) through use of the ASD feature, you may use the Relational Data Base Management feature to manipulate and retrieve these data. This feature supplies 12 commands and four utility programs to support activities like Select, Sort, Index, Join, Reformat, and so on.

See DataVu™ at your local software dealer. We also have a demonstration system up and running. You can dial in and try most of the DataVu™ features. Call us for more information.

Thinkers Soft, Inc.

P.O. Box 221
Garden City, NY 11530
(516) 294-8104

Report Generation: Reports generated from your data base(s) that become routine and have enduring value may be specified by you in detailed format to the Report Generation feature. It is designed to retrieve information from the data base with simple statements and perform arithmetic operations.

Desktop Accountant™

FULL-FEATURE, FULLY-INTEGRATED ACCOUNTING SYSTEM

Everything you need to keep the books...at a price you can afford!

A Complete System

includes all four standard general accounting modules:

General Ledger

Accounts Receivable

Accounts Payable

Payroll with check writing

- Produces 42 reports & documents
- Gives you a "big company" image with pre-printed forms, statements, invoices, checks, reports, etc.
- Each module may be run "stand-alone" or fully-integrated to post automatically to General Ledger
- Manual & Automatic check writing
- Detailed A/R & A/P Aging Reports
- Comprehensive customer data files
- Departmental Reports/Statements
- Friendly and fully menu-driven
- Flexible Chart of Accounts
- Instant access to all information
- System-prompted data entry
- On-line date file updating
- Complete, detailed audit trails
- Compatible with floppy & hard disk
- A truly professional system!

Here's What You Get

1. A professional, full-feature, fully-integrated accounting system.
2. Six 5¼" Double-Density diskettes, or 14 Single-Diskettes.
3. Four easy-to-follow, self-teaching User's Manuals (over 540 pages).
4. An exclusive, new audio cassette tape with step-by-step instructions for installation end start-up.
5. "Read Me First," a unique 40-page system guide end start-up aid.
6. Complete sample data end training reports for practice and training.
7. Free 1-year subscription to Users' Newsletter, "Debits and Credits".
8. Two 3-ring storage binders for User's Manuals end Newsletters.
9. Complete source code so you can easily customize any program.
10. Telephone "Hot Line" service for helpful installation support, Start-up support, Technical support, and Training support.

**Your Bookkeeper, Accountant,
and Banker will love you
for installing this great system!**

For Portable, Personal, and Desktop computers...including formats for CP/M and IBM PC (or compatibles).

WORDS ARE NOT ENOUGH!

Experience goes beyond words. We believe adventures should too. Asylum is the first adventure game for the IBM Personal Computer to feature 3-D graphics. Hallways recede into the screen as though you are actually there.

Doors open and close. Beds, desks, and other inmates are drawn on the screen. Instantaneously! And unbelievably, NO GRAPHICS BOARD IS REQUIRED!

What is Asylum? Asylum is a real-time simulation that takes place in a building with 1500 locations. It is inhabited by crazed inmates, sadistic guards, and evil doctors. Your goal? ESCAPE!

Asylum understands **complete sentences**, not just choppy one and two word commands. Sentences like "Drop everything on the desk except the matches" are interpreted and acted on **instantly**. Further, the command "VOCABULARY" will show you the entire lexical dictionary, eliminating the need to second-guess program designers you have never met.

Asylum supports **printer output**. If specified, all input and messages will be printed without slowing down the game. Among other things, this allows you to print the dictionary and/or your inventory at any time. A **panic button** allows those of you playing on the job to emergency abort, and later restore, a game in progress (our apologies to your superiors). **SAVE GAME** allows up to 10 games to be saved on your disk. Since Asylum requires months of work to solve, saving allows you to resume a previously adjourned game.

Asylum is brought to you in stunning machine language speed by Med Systems and Computer Applications Unlimited. The authors wish you luck!

Asylum is packaged in a custom vinyl album with complete documentation. No DOS or BASIC is required, since Asylum is 100% machine language. Minimum requirements are 48K, one disk drive, and the monochrome adapter and display.

Now...Supercharged communications software for your high powered 16 bit PC.

The makers of CROSSTALK proudly announce the newest entry into our line of high performance communications software. CROSSTALK XVI — a communications program with the speed and features of a fine racing machine. Shift from status display to incoming communications and back again at full throttle. Drive smoothly through the program with CROSSTALK XVI's integrated help system. Enjoy the full use of function keys. CROSSTALK XVI can be used with most outdial modems, and emulates several of the most used terminals. Test drive CROSSTALK XVI today at your local dealer.

**Now, get a complete
communications package
in just one package.**

Introducing PC Express.™

Until now, if you wanted a complete communications package for an IBM™ PC, you really had to go overboard. One board for sync and another for async communications. One for a modem. Yet another for electronic mail. You might end up filling all the expansion slots and still not fill your needs.

Now, you can get it all together with just one board—the new PC Express.

PC Express is a dynamic, interactive and powerful combination of sync, async and voice communications. It comes ready-to-use with software on diskettes, tutorials, and a pc board that easily plugs into an IBM PC or IBM-compatible computer.

It gives you complete PC-to-PC and PC-to-mainframe communications, including access to information networks such as The Source™, Western Union, Dow Jones News/Retrieval® and more. It puts at your command a fully integrated telephone management system with an unlimited telephone directory, full-screen text editor, auto-answering, auto-dialing from a data base, busy/ring/voice detection, on-board modem, electronic mail and more. For people who deal with people and information—brokers, marketing and sales professionals, managers—PC Express will eliminate the time you waste looking for data and make you more effective and productive than ever before.

PC Express enables your IBM PC to communicate with mainframe computers and perform DEC™ VT100/52 emulation. For added versatility, PC Express is also available with SNA, allowing your IBM PC to emulate a 3274 Cluster Controller, 327X and 3770 RJE terminals. For MIS Managers, that means you now have an effective way to reduce host processing and storage loads. And, for the first time, enjoy the productive possibilities of combining the problem solving powers of micro and mainframe software.

For details and your nearest dealer, call (415) 328-2411. Why waste time and money on boards that only offer piecemeal solutions, when PC Express can fill all your communications needs without filling your IBM PC.

Specifications

Sync and async communications with IBM mainframes, and async with DEC mainframes, PCs, and information networks: The Source, Western Union, Dow Jones News/Retrieval, etc.

Modems: onboard 300 baud, external up to 19.2K baud

External connectors: RS-232C, standard RJ11 phone jacks

Telephone management capabilities:

Data base telephone and address directory
Full-screen text editor
Touch tone and pulse generation line access

Auto-connect for voice
Auto-dial
Busy/ring/voice detection on outgoing calls
Auto-speaker control
Call history file
Voice/data switching on same call

Interrupt priority selection

Port address selection

Electronic mail with message text editor and 10-page buffer capacity

Programmable user-defined functions

Optional: SNA (327X and 3770 remote job entry emulation.)

On-line services can connect your PC to many specialized databases. If one can satisfy your information needs, it'll be worth your time and money.

The Database Connection

You've known about The Source and CompuServe for a long time, and you've heard about computer bulletin boards. But you think there ought to be more. The Source and CompuServe, with their CB chatter and their shop-et-home services, are all very nice for hobbyists, but you've bought a PC! You're a professional or a manager, and you've bought a working computer, not a toy. Are there any online services out there for you?

The answer is a qualified yes. And the principal qualifications are, first, that the other services out there are not cheap, and second, they're not something you're likely to want to merely dabble in. They require some commitment.

These other on-line services generally call themselves "search services." Their job is not to collect and create databases, but to make them available to users. There are two basic types of databases and, therefore, two different types of on-line services.

Word-oriented services maintain data-

bases that are primarily text; their software makes it possible to locate the pieces of text you need. Dialog, BRS, SDC, and QL Systems are the largest of the bibliographic on-line services; VU/TEXT, InfoGlobe, and NewsNet are other interesting full-text services.

Number- or computation-oriented services are more akin to the big time-sharing service bureaus. Their databases are usually sets of numbers; their software lets you not only retrieve numbers, but manipulate them as well. The largest of the number-oriented services are I.P. Sharp, Chase Econometrics, and General Electric Information Services.

They really do have heaps of information. Dialog, the biggest of the services, gives you access to 120 billion bytes of information, organized into 80 million records and 170 different files. A full-text newspaper database like InfoGlobe grows by a million bytes a day, and InfoGlobe has 6 years' worth of newspaper text on line. All this—and more—can be yours if

Thank god

Business at Bundtweiller Brass Beds is booming! And now that Friday's here to help out, I've got everything under control.

Friday's the revolutionary new micro-computer information management system from Ashton-Tate, the people who invented dBASE II!™

It came in Tuesday, and it took me almost no time at all to get the hang of it because Friday works *with* me, not against me. I've already turned stacks and stacks of paper files into much more efficient "electronic files." And it's so easy to use that even Mr. Bundtweiller can do it.

So now, no matter what Mr. Bundtweiller needs to know—no matter when he needs it—he or I can find it in seconds.

The names and commissions earned by our top 25 salesmen since January 1st.

The total number of #3455 Brass Beds sold year-to-date, by region.

A quick report on our cash receivables.

Or the special report for the Board of Directors meeting this afternoon. Mr. Bundtweiller forgot to tell me about it until just before lunch, but Friday and I got it done in no time at all. It looks gorgeous!

Friday even knows how to keep private

or confidential information to itself unless I ask for it using a special password.

Friday's helped me say goodbye to paper shuffling forever. It's terrific for inventory and invoices and paychecks and input screens and reports. It works with dBASE II™ and 1-2-3¹ and Wordstar² files. And the way it handles mailing lists and labels is just fantastic.

All for just \$295. It's worth it for the mailing lists alone.

it's Friday!™

So if you need some good, reliable help to handle just about everything that needs handling around your office, for my money it's Friday any day of the week.

For the name and location of the Friday dealer nearest you, contact Ashton-Tate, 10150 W. Jefferson Blvd., Culver City, CA 90230.

Or better yet, just call (213) 204-5570 today and find out why so many people are saying: T.G.I.F.

ASHTON·TATE ■

THE NEW STANDARD. THE MICROSOFT MOUSE.

Microsoft, the people who set the standard for software, have done it again with the Microsoft Mouse.

Our expertise in both hardware and software has gone into the development of the Microsoft Mouse. Now you can plug in the most exciting computer product of the year and put it to work.

The Mouse lets you move the cursor freely and naturally, then execute commands at the push of a button.

The Microsoft Mouse is a complete system. It comes with an on-screen tutorial, a practice application, and the Multi-Tool[®] Notepad, a mouse-based text editor, so you can begin using the Mouse right away. And for application developers, the Mouse includes a programmable

interface driver to give your application program complete control over the Mouse's operation.

That's the kind of support you'd expect from Microsoft. After all, we were the world's first microcomputer software company. Today, more than a million microcomputers are running Microsoft languages, operating systems, application programs, and hardware-software combinations.

You can get the Microsoft Mouse in dedicated versions for the IBM[®]-PC, PC XT, and in a version for MS-DOS machines with serial interfaces, including the IBM-PC. The Mouse supports all versions of MS-DOS, including version 2.0. Ask your Microsoft dealer for a demonstration of the Microsoft Mouse — a whole new standard.

BETTER TOOLS FOR MICROCOMPUTERS

MICROSOFT[®]

Microsoft is a registered trademark and MS and the Microsoft logo are trademarks of Microsoft Corporation

you have a PC, a modem, the requisite terminal software, a few account numbers and passwords—and quite a bit of time, money, and commitment.

(For details on modems, communications software, communications networks, and The Source and CompuServe, see the Communications issue of PC, Volume 1 Number 9. Also, the accompanying article, "Software for Searching," describes two software packages for your PC that are specifically designed to make searching easier.)

Heaps of Data

Once you're connected to an on-line service, what have you got? You've got a virtual mountain of data, organized into what are interchangeably called "files" or "databases," and you've got a selection of "search software." The search software is the software with which you interact and which helps you dig the information you want out of the database. The same pro-

cess operates with all the databases offered by a particular search service, but then each service uses a different setup—

**YOU'VE
bought a working
computer, not a toy.**

Dialog's is different from InfoGlobe's, which is not the same as BRS's.

To understand how searching works, it helps to see the way word-oriented databases are organized. Each database consists of a large collection of records. A record might be a newspaper story, or it might be a short biography. However, in most cases, with the existing on-line services, a record is a bibliographic reference,

similar to those in a library card catalog file. (Most of the larger on-line databases started out as tools for librarians.) Here's a typical record, taken from the Microcomputer Index file on Dialog:
032418 8202137

PL/I for limited resource computers
Kildall, Gary
Microsystems, Jan/Feb 1982, v3
ni p28-29, 2 pages ISSN: 0199-7955

Languages: English
Document Type: Article
Geographic Location: United States

Presents a reprint of an article taken from the NCC 1981 Proceedings that discusses the PL/I-80 implementation of the PL/I language that runs under the CP/M operating system. The author is the designer of the CP/M operating system.

Software For Searching

Programs will soon be available to help you develop and save effective search strategies.

SearchMaster

SDC Information Services
2500 Colorado Ave.
Santa Monica, CA 90406
(213) 820-4111

List Price: Not available

Requires: 64K, PC-DOS 1.1, one disk drive (two recommended), modem (Hayes Smartmodem needed for autodial), (printer recommended).

Communications Plus (C+)

Data Trek, Inc.
121 West E St.
Encinitas, CA 92024
(619) 436-5055

List Price: \$495

Requires: 64K, CP/M-86 (version for PC-DOS is being prepared), one disk drive, modem, (printer recommended).

To turn your PC into a terminal for work with on-line services, you need terminal software.

Basically, terminal software sends

what you type on the keyboard out through your computer's asynchronous port and sends what comes in through that port to the screen. A rudimentary program of this type, called COMM.BAS, came with PC-DOS when you bought your PC.

The next level of terminal software allows you to record your conversation with a remote computer and transmit or receive files directly to or from a disk. If you're going to do a lot of on-line work, it's worth investing in a program that allows you to do at least this much; its cost needn't be too high, and it will make life much easier. Be sure—that's absolutely sure—that whatever software you have includes the "Break" function. On-line services make extensive use of the break function, and if you don't have it in your software, you can't, for example, stop the 30-page display instruction that you gave by mistake.

A recent arrival on the communications software market is software especially designed for communications with on-line database services. Two such packages, still undergoing final development,

testing, and manual writing, are Communications Plus (C+) by Data Trek of Encinitas, California, and SearchMaster by SDC. (That's the same SDC that offers the on-line service, but its software isn't tied to its service.)

Like a number of other communications software packages, both C+ and SearchMaster allow you to create a file of search services, which includes their phone numbers, your account number and/or password, and the specific communications technicalities for each service. Once this file is set up, by making a simple menu choice, you can be connected to the service you want.

Scripts for Searches

What makes these packages especially useful for database searching is the assistance they give you in developing "scripts" for your on-line interactions. With database charges running to \$1 a minute or more, you want to think through your data request well in advance of signing on and compose your transactions in advance.

Descriptors: PL/I; Languages: CP/M

This record describes an article in the January/February 1982 issue of *Microsystems* magazine, written by Gary Kildall, entitled "PL/I for Limited Resource Computers." The brief description starting with "Presents a reprint..." is an abstract of the article. This record is divided into fields: record numbers, title, author, publication and reference, language, document type, geographic location, abstract, end descriptors.

Most of the bibliographic databases offered by the "big-three" services—BRS, Dialog, and SDC—are structured roughly like the one shown, with similar fields. But each database has its own peculiarities. For example, Dialog's Legal Resource Index includes a "jurisdiction" field, referring to the state in which a legal article is relevant. The Newspaper Index offered by SDC doesn't offer an abstract of the article indexed, only the title, name of

the newspaper, and a set of index terms.

Full-text databases, on the other hand, include the entire text of the article; these services are still rare. But more and more of them are appearing, as the interests of database users move out of the library card

THE SEARCH software helps you dig the information you want out of the database.

catalogs end into the world in general.

Seek and Find

What can you do with these records? Typically, you can search them out and

you can print them on your terminal and printer, or on the service's printers. Sometimes, you can place an order for a copy of the published article, but count on 1 to 2 weeks for delivery.

Searching and printing the records is the job of the on-line service's software. The search software allows you, in a few seconds, to locate every record in the file that contains any designated word or combination of words.

Here's an example illustrating the search process. You're a writer who wants to go to the National Computer Conference. You intend to convince an editor that interesting things happen there, so he will pay for your trip. You think it would be useful to show him evidence that other media take the NCC seriously, so having references and copies of articles about last year's NCC (held in Houston) would be helpful.

Assume you're using the Dialog search service. To start with, you look through

Say you wanted to do a search for information about the National Computer Conference, and you decided to use the strategy described in this article. You'd jot down the following set of commands to Dialog and hope that your search would go as planned.

```
begin 233
select ncc
display 1
begin 47
select computer or computers
select s1 and houston
display 1
```

With both C+ and SearchMaster, you could key in this list of commands before you go on-line. You would choose the service with which you wanted to communicate and work your way through the script you'd keyed in.

Communications Plus

With C+, the script appears on the top half of your PC's screen, the ongoing conversation with the database scrolls on the bottom. Hitting the Tab key sends the next line of script to the distant computer.

You can also alter the lines before you send them if you decide you want to improve your script. For example, if your "computer or computers" instruction

turned up only five references, you might choose to skip the "Select s1 and houston" step, and display the first five references immediately. You can also skip back and forth between editing the script you've developed and interacting directly with the on-line service.

C+ also features a "think key." Because some databases are much more expensive than others, you want to be connected to a cheap one if you want to sit back and take time to think a bit. Hitting one of the PC's function keys causes C+ to send the on-line service the necessary commands to quit the database you are working in and connect you to the cheapest one around.

SearchMaster

SearchMaster goes a step further in developing scripts. Not only can you develop the script for a particular search, but you can develop general scripts, with fill-in-the-blanks capability. For example, say you frequently search for information about particular companies, and you've learned what three databases are the most pertinent and know exactly how to specify your search to weed out reports about the companies' annual picnics. You can save that strategy in a form in which the company name is replaced as a variable name.

When you instruct SearchMaster to run the search, it will prompt you for the company name and any other information specific to this search; then it will do the search quickly and without any further intervention.

The script can present menus and prompt for choices from among them, and it can turn control back over to the user at any time. It can't, however, branch in response to the data it has retrieved from the database; that is, you can't tell it to follow one strategy if it retrieves 500 or more references, and another strategy if it locates fewer than 500.

Customized Searches

And, of course, this raises the possibility of professionally-programmed searches. SDC may soon be in the business of developing and selling scripts for SearchMaster. You could buy, for example, a political personality search script for InfoGlobe or a corporate date script for Dialog and run it on your SearchMaster-equipped PC. SDC expects that other organizations will write and sell scripts that run using SearchMaster. If you used their software, you'd never have to know about developing search strategies and the like as long as your needs were constant and predictable. —J.H.

From Author to Reader Via Databases

Publishers and search services are among the parties involved in making a database available to you.

Data finds its way to your PC's screen through a chain of intermediaries.

At the far end of the chain, as seen from your point of view as a database user, is the original author's text: a magazine article, a book, or a newsletter. In the case of a full text database, such as InfoGlobe or the VU/TEXT service, the chain is short; the corporation that pays the writer and publishes the printed version also loads the same text onto a computer and sells you access to it through a database. In most cases, though, you'll get a longer chain of middlemen.

Take, as an example, an article in Fortune magazine on automobile unions. Fortune's full text is not available except on paper at the moment. But there's a magazine called Monogement Contents, published in Northbrook, Illinois, that consists of the tables of contents of 375 different business periodicals and indexes to the articles.

Monogement Contents' publisher, using the same information it needs to compile its print version, also produces a computer-readable product. It consists of bibliographic citations and a brief abstract of each article, recorded on magnetic tape. Here's an example of the kind of information it records on each article:

- Ross, I.
- The New UAW Contract: A Fortune Proposal.
- Fortune, Vol. 105, No. 3, Feb. 8, 1982, P. 40-45.
- Interview: Automobile Industry; United-States; Labor-Costs; UAW; Labor-Negotiations; Competition; Cost-of-Living-Adjustments; Employee-Benefits; Japan.

This record is followed by nine lines that describe the article.

This magnetic tape is the raw material of a database: by producing it, Monogement Contents qualifies as a "database producer." But Monogement Contents doesn't sell access to its database directly to you. Instead it sells data to the search

services that market it to you.

Monogement Contents sells its tape to all three of the largest search services—Dialog, BRS, and SDC—so you can get access to Monogement Contents if you subscribe to any one of the three.

When each of these search services receives the monthly Monogement Contents tape, it massages and reformats the information and adds the data to its Monogement Contents database. Monogement Contents is called "file 75" on Dialog, "MANAGEMENT" on SDC, and "MGMT" on BRS.

Then the search service sells it to you, along with the software necessary to search and retrieve the data you want from it. Using the Monogement Contents database costs you \$70 per hour with SDC, \$80 an hour with Dialog, and \$75 an hour with BRS. Of each of these fees, approximately \$40 is paid to Monogement Contents as a royalty on the database.

This is the most common path for a printed article: from author to print publication to indexing/abstracting organization (that produces the index in print form) to search service to end user. But there are instances in which one or more of these steps is skipped. For instance, some of the NewsNet newsletters exist only in their electronic versions; there is no print step in this case. Some of the indexes, such as ABI/INFORM, another service that covers business publications, have no print equivalent.

Sometimes the producer of a database will sell it to you directly, as well as through a search service: Chemical Abstracts Service is an example of this.

The royalty structure above—where the search service charges the user and pays a royalty to the database supplier—is also not fixed in stone. Some databases, primarily government-produced ones, are "sponsored"—that is, the producer pays the search service to provide the database. There may or may not be royalties that may or may not go to the producer. It all depends on how eager the producer is to have its data used.

—J.H.

Dialog's list of databases, and you discover several that look interesting. For starters, there's the Microcomputer Index ("... guide to magazine articles from over 21 microcomputer journals..."). Dialog also has the Magazine Index ("... covers over 370 popular magazines...") and the National Newspaper Index ("... monthly updates... provides front-to-back-page indexing of the Christian Science Monitor, the New York Times, and The Wall Street Journal..."), which look useful.

You start with the Microcomputer Index. You sign on to Dialog and give it your password. Then you tell it to:

```
begin 233
```

(233 is Dialog's file number for the Microcomputer Index). Dialog confirms that you are connected to the Microcomputer Index, and you instruct it to:

```
select ncc
```

That is, select all records in the current file in which "ncc" occurs (use of capital letters doesn't matter in a search).

In a couple of seconds, Dialog responds with:

```
1 20 NCC
```

This tells you that set 1 (your first "select" request) consists of 20 records in which "NCC" appears.

With only 20, you could look at them all without too much trouble. You tell Dialog to:

```
display 1
```

meaning to start displaying set 1 on our terminal. Each of the 20 records displayed looks like the one above (for an article by Gary Kildall) and every one of the articles is on target. The sample record, however, illustrates one possible problem: That arti-

EACH database has its own peculiarities.

cle referred to the NCC, without being about the NCC. If you'd gotten 200 NCC records, you would want a way to get rid of the ones like the example.

That was a successful search, provid-

TM Statement of Emerging Technologies Corporation, Inc.

ing relevant results quickly and easily. But if you search further you can see what coverage the NCC received from general interest magazines, rather than just the microcomputer magazines. To do this, you have to leave the Microcomputer Index and look at the Magazine Index (Dialog file number 47). To do this, you simply say:

Begin 47

Dialog obliges by telling you that your conversation with the Microcomputer Index lasted .194 hours (about 12 minutes) and cost €10.28. It then says:

File 47: Magazine Index

Searching for NCC was such a success in the Microcomputer Index, why not try again? So you enter:

Select NCC

and Dialog responds with:

1 74 NCC

This indicates it has found 74 magazine references to the NCC. (Note that you're back to set 1 again, which happens every time you change files.) You ask Dialog to "display" again, and what do you get?

1573825 DATABASE: MI File 47
NCC controversy 'deja vu':
current gay right debate recalls
civil rights conflict.

Jones, Arthur
National Catholic Reporter v19
p6(1) Feb 4 1983
CODEN: NLCRB

IF YOU
search further you can
see what coverage the
NCC received from
general interest
magazines, rather than
just the microcomputer
magazines.

DESCRIPTORS: National Council
of Churches-social policy; Met-
ropolitan Community Churches-
social policy; homosexuality
and Christianity-political as-
pects; ecumenical movement-po-
litical aspects

"Gay rights"? What does that have to
do with the National Computer Con-
ference? A quick check of the title and the
descriptors shows us the problem: this

NCC is the National Council of Churches.
Considering it's a national magazine
index, odds are that most of those 74 NCC
references are church- rather than com-
puter-related.

So now try a more general approach.
Start first by seeing how many computer
references there are in the Magazine
Index. Say:

Select computer or computers
where "or" means that you want all refer-
ences to either "computer" or "comput-
ers" or both. Dialog's response (maybe five
seconds later) is:

8710 COMPUTER
5071 COMPUTERS
2 11220 COMPUTER OR COMPUTERS

telling you that it has found 8,710 records
containing the word "computer," 5,071
containing "computers," and 11,220 con-
taining one or the other. These records
have been assigned to set 2. (You can cal-
culate that about 2,500 records contained
both "computer" and "computers"; each
of these records is referenced only once in
set 2.)

Clearly, to find the National Computer
Conference records, you'll have to cut
down that set 2 somewhat. How can you
eliminate the extraneous records? Well,
you know that these are magazine articles,
and that magazine articles tend to say

Figure 1-Records found in a search through Select's Magazine Index.

where things are happening. The 1982 NCC was in Houston. So try that approach by using an "s" instruction (S is short for select).

S s2 and Houston

This entry instructs Dialog to identify the records in set 2 (s2) that also contain the word "Houston." Dialog responds:

1682 HOUSTON
3 9 S2 AND HOUSTON

telling you that it has found 1,682 "Houston" references, and that it has created set 3, consisting of the 9 records with references to both set 2 ("computer or computers") and "Houston." When they're displayed, the records appear as in Figure 1. The first one isn't what you want, but the second reference is on the mark. The following records are in shortened form.

By the sixth record, the references go back to 1981 and are less relevant to you. So this hunt retrieved four relevant articles, none of which you'd seen in the Microcomputer Index. It's possible they were actually there, but you didn't search for anything there but the abbreviated version "NCC," so they didn't turn up.

Looks fairly easy, right? Then why does Dialog strongly suggest that you take its \$135, day-and-a-half-long course before you start using the service? (The other services propose similar training.) It's because it takes real skill to be effective at on-line searching; the full power and subtlety of the system is only realized when you know exactly what you're doing.

It's difficult to describe the difference, but an example might help. A colleague of mine wanted to study the newspaper coverage of a particular political issue that was raised last year. Using InfoGlobe, he spent an hour (and over \$150) trying to find the information he wanted. He couldn't find it and came away from the experience very critical of on-line searching in general and of InfoGlobe in particular. A few weeks later, I presented the same problem to an experienced, professional searcher with InfoGlobe. In less than a minute she found exactly the information my colleague had been seeking.

Most of the time, you can get useful results from an on-line service right from the start. But to be efficient and cost-effective requires some training and practice. That's why using an on-line service requires a commitment; it's not likely to

A Guide To Search Services

The following are some of the database search services that can be reached through your PC.

Word-Oriented Search Services

Word-oriented search services consist of textual information, organized and indexed to make it easy to locate text on your subject. Typically the services allow little computation, and they charge for their services on the basis of the length of time you are connected to their computers. Some of the largest word-oriented search services are listed below:

Dialog Information Retrieval Service

3460 Hillview Ave.
Palo Alto, CA 94304
(800) 227-1927
(415) 858-3785

Number of Databases: 170

The "supermarket" of databases, covering all fields. Largely bibliographic, but also includes databases such as the Electronic Yellow Pages.

Cost And Fee Structure: Per-hour fee varies with database, average \$80/hour, maximum \$300/hour. Communication extra \$8/hour in U.S. No initiation fee, \$100 free connect time with subscription.

Knowledge Index

Dialog Information Services
3460 Hillview Ave.
Palo Alto, CA 94304
(800) 528-6050

WORD-
*oriented search services
charge for their services
on the basis of the
length of time you are
connected to their
computers.*

Dialog's cheaper, after-hours service aimed at the microcomputer market. Includes some of the most popular Dialog databases. Software is easier to use, but

slightly less powerful.

Cost And Fee Structure: \$24/hour flat, including communications. \$35 initiation fee, includes self-instruction manual and two hours free search time.

SDC Search Service

2500 Colorado Ave.
Santa Monica, CA 90406
(800) 421-7229
(213) 453-6194

Number of Databases: 70

Largely bibliographic, with heavy coverage of science and technology. Also a number of exclusive databases such as World Patents Index, and the index to the Christian Science Monitor.

Cost And Fee Structure: Per-hour fee varies with database, \$70/hour average, plus \$8/hour communications. Initiation \$125, includes self-instruction manual and \$300 on-line time.

BRS

1200 Route 7
Latham, NY 12110
(800) 833-4707
(518) 783-1181

Number of Databases: 75

Broad range of subjects, mostly bibliographic, but including a number of unique full-text databases such as the Academic American Encyclopedia.

Cost And Fee Structure: Per-hour fee varies with database, \$60-\$70 average, plus \$6-\$11 for communications. \$50 initiation fee applicable to on-line time.

BRS After Dark

1200 Route 7
Latham, NY 12110
(800) 833-4707
(518) 783-1161

Number of Databases: 25

BRS's cheaper after-hours service, including its most popular databases. Easier to use than BRS main service.

Cost And Fee Structure: Per-hour fee varies with database, from \$8 including communications. \$50 initiation fee includes manual. \$12/month minimum billing.

VU/TEXT Information Services

P.O. Box 8558
Philadelphia, PA 19101
(215) 854-8297

Number of Databases: 6

Full text of Philadelphia Enquirer and Daily News, Lexington Herald-Leader, Wall Street Transcript, Pennsylvania Legislative Database, Academic American Encyclopedia. To be expanded to cover all Knight-Ridder newspapers.

Info Globe

444 Front Street West
Toronto, Ontario, Canada M5V 2S9
(416) 585-5481

Number of Databases: 1

Full text of Toronto Globe and Mail, available at same time as printed version.

Cost and Fee Structure: Approx. \$127/hour (in Canada \$159). No initiation fee, no minimum.

NewsNet

945 Haverford Rd.
Bryn Mawr, PA 19010
(215) 527-8030

Number of Databases: 112 newsletters

Electronic editions of private newsletters in over 30 subject areas. Heavy concentration in computers and electronics, but includes also Latin American Energy Report and Ecology USA.

Cost and Fee Structure: \$24/hour to search newsletters, \$24 to \$120/hour to read them (at 300 baud; price is double for 1200 baud). Prices are lower for subscribers to print version of newsletters. No initiation, \$15/month minimum.

The missing service: As of July 1983, the New York Times on-line service is available exclusively through Mead Data Control, a major database service specializing in full-text magazine and newspaper databases. Mead isn't included here because you can't access it from an IBM PC; you have to use one of Mead's dedicated terminals. If you are interested, the address is Mead Data Central, P.O. Box 933, Dayton, OH 45401, (800) 227-4908.

Number-Oriented Database Services

Number-oriented databases usually

consist of sets of numbers that are meant to be manipulated, rather than just retrieved and looked at. Probably the most common type of numeric information is the "time series," which is simply a set of values for some phenomenon at different points in time. For example, the price of

***T**HE CHARGES for using numeric data bases depend on the amount of computation you ask the host computer to do.*

gold in London at the close of trading each day in March 1983 is a time series. Because the information is meant to be manipulated, the charges for using numeric data bases depend not only on how long you are connected, but on the amount of computation you ask the host computer to do.

I. P. Sharp Associates Ltd.

2 First Canadian Place #1900
Toronto, Ontario, Canada M5X 1E3
(416) 364-5361

Number of Databases: 100

Statistical and economic information, huge collection of aviation information, historical stock and bond prices.

Cost and Fee Structure: \$1/hour connect plus \$.70 per thousand characters transmitted, plus \$.45 per "CPU unit" (the biggest part of the charge).

Chase Econometrics

150 Monument Rd.
Bele Cynwyd, PA 19004
(215) 896-4772

Number of Databases: 100

Economic and financial databases, including historical and projection data, and projection models.

Cost and Fee Structure: Minimum \$1,000 per year, plus computer time, per data base. —J.H.

be right for you if you want to use it only once a month for a few minutes.

Fees and Charges

The Magazine Index search in our example, which included a fair number of false starts that are typical of an inexperienced searcher, cost \$15.60. An experienced searcher probably would have cut that down to about \$10.00.

Add \$15.60 to the \$10.28 expended on the earlier Microcomputer Index searches, and you come up with a figure of about \$26 for about 20 abstracts or references to articles dealing with the National Computer Conference.

These charges are based on a per-hour fee for being connected to the particular database, plus \$8 per hour for communications costs. This per-hour charge is typical of the word-oriented services, and varies little from service to service. The services differ, however, in charges for up-front deposits, manuals, and training. The accompanying list of search services gives a rough idea of the breakdown.

So comes the big question: Is it worth the money? And comes the answer: It depends.

Who Needs to Search?

In the example, your initial reason for searching for NCC references was that you needed evidence to convince a newspaper editor to send you to attend the NCC so that you could write some articles for him. Is this information worth \$26? Depends on whether it convinces the editor! But without an on-line search, it would have taken vastly more time to collect the evidence, and you probably wouldn't have found

WITHOUT
an on-line search, it
would have taken
vastly more time to
collect the evidence.

nearly as many references. On the other hand, if you had found them at the library, while you were there you could have made photocopies of the articles. In this

particular case, though, the article references are probably all a busy editor will need to look at anyway.

How can you decide whether there's enough information of interest to you to be worth using an on-line service?

Odds are you're going to find more use for a database if you're a scientist, a doctor, an engineer, a lawyer, or a specialist or professional in another clearly-defined discipline. There are two reasons for this. First of all, disciplines beget organizations and university faculties, and these beget journals and indexes of journals. So in these fields lots of information is being generated especially for you, in a structure that's amenable to on-line indexing. The second reason, which is the other side of the same coin, is that your information needs are likely to be clearly defined.

So if you're in one of the professions, write to each of the three big on-line services (Dialog, BRS, and SDC), get lists and descriptions of their databases, and see which one is going to be most useful to you. If you're in a medical field, chances are BRS will be your choice. If you're in research and development, SDC has a number of useful databases that no one else has. Dialog's the biggest service, and its databases often overlap with the other two, so with Dialog, you may well find everything you need in one place.

If you're not a professional in a tightly-defined discipline, it will be harder to assess which of the database services can best meet your needs. It's also less likely that any are ready to serve you well, at least until more full-text databases and popular-press databases become available.

General Interest Searches

Right now, several such resources are available. You have a number of newspapers. Knight-Ridder, the big newspaper chain, is gradually bringing its papers online in a service called VU/TEXT. At the moment it has four papers available, the Philadelphia Enquirer being the best known. Surprisingly, the best newspaper service currently available is a Canadian service called Info Globe, the electronic edition of the Toronto Globe and Mail. Its coverage of United States news at the national level is fairly complete, and its international coverage is better than most United States papers'. It is available online the same day it is published (next day

service is provided by VU/TEXT) and it maintains 6 years' worth of text in a single database (only 3 years' worth of the Philadelphia Enquirer in three separate files are available from VU/TEXT). The New York Times also produces an on-line version but, as of this month, sells it exclusively through Mead Data Services, which won't let you connect to its service with your PC—you need a special terminal.

Besides newspaper databases, there's NewsNet. NewsNet makes over 100 of those specialized, hundred-dollar-a-year-

BRS AND *Dialog offer easier to use and cheaper, but less powerful and less extensive, after-hours services.*

and-up newsletters available on-line—things like Agri-Markets Data Service, Entrepreneurial Manager's Newsletter, Legislative Intelligence Week, and an assortment in the computer and communications fields. You can search them for any combination of words for a flat \$24 per hour. If you want to read them and you're already a subscriber to the print edition, the price is still \$24 per hour. However, if you don't subscribe to the print edition, the price jumps to as high as \$120 per hour.

Although Dialog began as a bibliographic database, as did SDC and BRS, it has since adopted a "supermarket" philosophy and has included a number of databases of considerable interest to the nonspecialist user.

For example, its Electronic Yellow Pages allow you to search the yellow-page listings of the entire United States by business categories, city or state, zip code, telephone number, or city population. A search that cost about \$20, for example, revealed that there were 11,543 establishments classified as "Nightclubs and Discotheques" in the United States, of which 116 were in Massachusetts. If you had those entries listed on your PC, and if your

terminal software allowed you to store what's listed, then for a few minutes time and a few dollars you'd have a perfect contact list. This could mean money in your pocket if you are a liquor salesman, a manager of a rock band, or an exotic dancer (in the last case you could have excluded Boston from your search).

Social climbers and corporate executives looking for prospective board members will find the on-line edition of Who's Who useful. Journalists, lobbyists, law-makers, and lawyers might take advantage of the "Congressional Record Abstracts" or "Federal Index" databases. The U.S. Department of Commerce maintains a "Trade Opportunities" database on Dialog, with such listings as Pakistan government tenders for railway ties. The Department of Commerce considers this database useful enough that Dialog users outside the United States cannot access it.

And if you're not sure how interesting or useful all this is, or if you want to learn how to do searches for a lot less money than the standard on-line services charge, both BRS and Dialog offer easier to use and cheaper, but less powerful and less extensive, after-hours services. BRS calls its service "After Dark," and it gives you about half of the full BRS service, with a simple, menu-driven command structure. Dialog's "Knowledge Index" offers a dozen or so of its 170 databases, including the National Newspaper and Magazine Indexes mentioned above. The "Knowledge Index" doesn't offer access to the Microcomputer Index, or the Electronic Yellow Pages, or many of the powerful trade and industry databases available on the full service, but it's a great way to get started.

Data by the Numbers

Number-oriented databases store strings of numbers rather than text. If these numbers represent measures of the same thing at different points in time, the string of numbers is called a "time series." For example, Malaysia's imports in U.S. dollars, each year from 1970 to 1982, are shown as a time series with 13 values in it.

I.P. Sharp maintains what is probably the largest collection of public numeric databases; it claims it can give you 40 million different time series from 100 different databases. To see clearly the difference between a numeric- and a word-oriented

Protect Your PC!

Dirt, dust, and smoke can effect the successful operation of your IBM PC,* even shorten its useful life.

Now you can protect your PC from these damaging airborne particles with our custom designed disk and keyboard dust covers.

CompuCable Corporation, a leader in the manufacture and distribution of computer products and accessories, has produced these handsome dust covers with you the PC owner in mind.

We know that you value your PC, so we've made both covers of high quality, smoke colored plastic that will protect your PC for years to come. We've also

engineered them to enhance the natural beauty of the IBM PC.

Best of all, this durable dust cover set can be yours at a surprisingly affordable price.

You depend on your PC to fulfill your information processing needs. Protect it!

For information on where to get the IBM PC dust cover set, call us at **800/222-2332**. In **California call 800/821-0684**, in Alaska and Hawaii call 714/635-7330. Dealer inquiries are welcomed.

Powerbase for the powerhouse

At last: a completely new relational data base management system that fully utilizes and enhances the power of the best micro on the market today. And makes it available to those whose expertise is business, not computers.

We call it POWERBASE.™ Software clever enough to meet your information needs, easy enough to be mastered in half an hour. No fancy programming. No unnecessary computer jargon. You simply paint your screens and define the information you need. PowerBase does the rest. Pleasurably.

PowerBase Introduces DATAZOOM™ and the exclusive Zoom Key which, at the touch of your fingertip, explodes data to deeper and deeper levels of revealing detail. Other features include ultra-fast b-tree access, multiple files, powerful editing and table look-up functions, flexible report writer, the ability to search, sort, and scan other files... and many more.

Master data without having to master computers. The power of the micro is now fully yours with PowerBase, the new breed of software that makes data management basically simple.

Dealer inquiries invited.

service, consider one database that's maintained by both Dialog (as a word-oriented database) and I.P. Sharp (with a numeric orientation).

This database is produced by Business International Corporation, and is called BI/DATA. The data consists of 21,000 time series for 131 different countries. Say that you're interested in exports from Malaysia. With Dialog, you could search for "Malaysia and exports," and find that there were six records with captions such as "Total exports," "Exports to U.S.," "Exports to Japan," and so on. If you displayed one of the records, you would see a table of numbers: "In millions of Malaysian dollars. 1970 \$375,000 1971 \$412,000 ..." and so on. That's it. Each of the six records contains the appropriate table, but on a word-oriented service, you can do nothing but retrieve the table and print it or store it on your computer.

Compare this with how exactly the same data can be stored and manipulated using I.P. Sharp's numeric orientation. You can retrieve total Malaysian exports.

You can convert it to U.S. dollars. You can retrieve the U.S., Japanese, and other subsets, and convert them to the same currency. You can print out the whole set as a

MAKING effective use of this powerful software requires practice and commitment.

single table, and you can choose the format of the table. You can go to an entirely different database, say for currency exchange rates, and discount each figure according to currency exchange rates in each year. And you can even have the data printed as a graph, or have it graphed on one of I.P. Sharp's plotters. These are all functions in which a numeric database

and the accompanying software excel—they are beyond the capacity of typical word-oriented software.

But making effective use of this powerful software requires even more practice and commitment than with a service like Dialog. If you wrote an I.P. Sharp command to build a table of Malaysian export data, in U.S. dollars, on a per-capita basis, it would look something like this:

PUR 'USA/PC' BIHIST 'IMPT, IMUS,
IMEEC, IMJAP/MLY'

This is considerably more cryptic than anything you'll see in Dialog. By the way, the cost of producing a graph of the export data described above would be in the \$30 to \$40 range; retrieving and printing the simple tables with Dialog would cost about \$20.

The bottom line? On-Line services are an unbeatable tool in terms of speed and power of information retrieval. The real question is: does the service have information you can use? If so, it's right for you.

/PC

How Databases Are Organized

The secret behind swift and successful searches is the inverted file method used by major databases.

The ERIC database of educational references contains 480,000 records, the Electronic Yellow Pages has over 2,500,000 in its retailers subsection alone, and the Chemical Abstracts Service search database has an unbelievable 5,720,000 records. Yet within a few seconds, Dialog or SDC or BRS can tell you how many records contain a particular word in any one of these databases, and the speed doesn't seem to be related to the size of the database. How does this work?

The answer is indexing and inversion. You can think of each bibliographic reference as being like a single index card found in a library catalog. In computer terms, each card is a "record"; each record, therefore, represents one bibliographic reference. Each month, database producers send the search services computer tapes carrying the records for that month's additions to the database.

The first thing the search service does is assign an internal reference number to each record. The second thing it does is create an inverted equivalent of the data-

base or the updates.

Inverting a database means creating a new version of the database, which consists of a list with each word in the data followed by a set of pointers to the records in which the word occurs.

For example, here's what a part of the inverted version of the first four paragraphs of this article would look like, using paragraph numbers as record numbers:

card	2			
chemical	1			
computer	2			
consists	4			
create	3			
creating	4			
data	4			
database	1	2	3	4
databases	1			
does	1	3		
doesn't	1			
each	2	3	4	

For example, the word "card" appears in paragraph 2, and "database" appears in paragraphs 1, 2, 3, and 4. If the inverted

file is itself indexed, the computer will know that the "d"s start with the 6,512th position in the inverted file. It then becomes quite simple for the computer to head directly for that alphabetical section and respond in a few seconds that the word "database" occurs in all four paragraphs, and that "database" and "does" occur in the same paragraph only once (in paragraph 3). Of course, searching for "does" and "each" isn't likely to be very useful, but exactly the same approach is used to search for "gifted" and "child" in the ERIC educational-research database, or "stationers" and "Missouri" in the Electronic Yellow Pages, or "toxic" and "dump" and "water table" in the Chemical Abstracts database.

Once the software, working through the inverted file, has determined that a particular set of records contains the combination of terms specified in the search, it uses the record numbers (like the paragraph numbers given above) to go and fetch the actual bibliographic references in their uninverted form.

Memory Shift FREE with the purchase of any Quadram memory expansion card, Quadboard, or Quad 512+ (See opposite page for prices).

9 IBM'S IN 1!

Microhouse introduces, "Memory Shift," the best friend your IBM PC ever had. Memory Shift divides your available memory (RAM) into 9 user definable partitions. Each partition can contain a program, i.e., wordprocessor, spelling checker, spreadsheet, database, instructional program, etc. Each program can be called up instantaneously without the need to swap discs or exit a program. Memory Shift will automatically save your program and return you to it exactly as you left it. Memory Shift will even allow you to mark information on the screen of one program and send that information to another program as though you had typed it. If you have both a monochrome and color monitor, you will be able to display 2 programs simultaneously, one program on each screen. The possibilities are endless. (minimum memory requirement 128K)

Good reasons why you should subscribe to *Creative Computing*.

It's the Number One magazine of computer applications and software!

There's one place you can always be sure of learning more about microcomputer software and applications: *Creative Computing*.

Every month *Creative Computing* provides you with a continuing education on everything related to microcomputers and computer equipment. Useful articles, "how to" tutorials, exciting new applications, games and "no holds barred" reviews of the latest software and equipment make up a major part of *Creative Computing's* editorial content.

We give you probing features on programming breakthroughs and important news. Plus in-depth articles on elementary, intermediate and advanced software and applications topics—to help you develop your knowledge and skills, save hundreds (perhaps thousands) of dollars in unneeded software, discover uses for your personal computer that you might never have considered. Articles that increase your overall "computer consciousness." Here's how:

1

***Creative Computing* gives you things to actually do with a computer.**

Just owning a computer isn't enough. You've got to know what to do with it. That's why applications are our primary focus: Text editing, animation, graphics, business simulations, data base and file systems, music synthesis, control of household devices, communications, games—some of the applications and software you'll learn about in *Creative Computing*.

2

***Creative Computing* discusses business applications in simple, nontechnical language.**

If you're a business person who needs to know about the latest developments in word processing and office applications, turn to *Creative Computing*. We clearly such business applications as investment analysis, futures evaluations, data base management, mailing list programs, text editing, word processing and simulations. And all the software available for business people.

3

***Creative Computing* helps you decide which computer equipment is best for you.**

Our tough, no-nonsense equipment profiles arm you with the facts before you walk into a computer store. You'll know the right questions to ask and how to cut through the jargon and sales hype. We give you authoritative guidance in deciding what you need, what you don't need—and what's right for you and your pocketbook.

4

***Creative Computing* covers computer education in depth.**

We started out as a computer education publication, and we're still committed to the educational community. We regularly carry articles on designing educational software, evaluating educational software, teaching concepts and terminology in computer education, text editing applications for literature and computer simulations in the classroom—plus a great deal more.

5

***Creative Computing* brings you hours of mind-expanding game entertainment.**

We've got a soft spot for the computer game addict—and computer game software. We know you want to understand more about the new computer games flooding the market: which ones are easiest to learn? Require the most skill? Offer the most surprises? Give you the best graphics? Provide the most challenge? Contain a new twist? *Creative Computing* brings you the answers.

6

***Creative Computing* features the state of the art.**

Columns on the most popular personal computers, a "software legal forum," letters to the editor. Reviews of books, games, organizations, dealers and events. Fascinating interviews with leading innovators, equipment designers, program developers and game inventors—men and women who'll give you a real glimpse of the future!

7

Our price is right.

By subscribing to *Creative Computing* now, you can save as much as 33% off the full subscription price. To learn elsewhere what you'll learn from *Creative Computing*, you might spend hundreds of dollars in course fees and books. Then you'd have to winnow out what you could use from all that you'd learned. But *Creative Computing* does that for you, so you'll have time to enjoy your own computing interests. And that saving of time makes this offer very expensive indeed.

SAVE UP TO 33%!

Creative Computing • P.O. Box 5214 • Boulder, Colorado 80322

PIE: Writer

The best microcomputer word processor any money can buy.

Thousands of dollars worth of word processing performance for just \$149.95

Who's saying that?

Arthur Naiman, for one, in the "Word Processing Buyer's Guide" to be published soon by McGraw-Hill.

In his definitive study, Naiman compared 14 major word processing products—and PIE: Writer was among the top three. Its nearest neighbors were dedicated word processors which cost from \$13,500 to

\$15,000. (See a portion of the study results below.) Yet PIE: Writer can be part of your personal computer system for just \$149.95!

So now your business or home microcomputer can have capabilities equivalent to the industry's top machines. Naiman says:

"PIE: Writer, running on a humble Apple II, outscored every other word processing program for microcomputers . . . (It) crams an incredible amount of power into a small (23 1/4 K) and inexpensive package . . . PIE: Writer beat four out of six dedicated word processors."

No other microcomputer word processor earned the ranking that PIE: Writer did. PIE: Writer can make your personal computer into a word processing whiz.

That's not all.

PIE: Writer has been steadily collecting honors from experts throughout the industry for its all-around price/performance and its many advanced user features.

When *Feelings II* magazine compared 10 micro word processors, PIE: Writer came out on top . . . again. *Feelings II* rated PIE: Writer "AA + " and defined the rating as "... top notch, superb." The review concluded:

"... a formidable contender in performance to price ratio . . . PIE: Writer is hard to beat."

And *Interface Age* said in an in-depth review of PIE: Writer's current version:

"... much has been gained in this update to a time-tested classic."

	Operating system(s) and/or machine(s)	Price	Overall Score
CPT 8100	dedicated word processor*	\$15,000	94%
Dictaphone Dual Disp.	dedicated word processor*	\$13,500	85%
PIE: Writer:	Apple II, IBM PC	\$149.95 \$199.95	84%
A.B. Dick Magna SL	dedicated word processor*	\$14,500	83
Write	CP/M†	\$400	82%

*Includes word processing hardware & multistation support

†Requires additional CP/M Hardware for your personal computer (\$800-600 extra)

CP/M is a registered trademark of Digital Research

*Vastaco is a registered trademark of VLSI Corp.

Why the experts love PIE:Writer.

Why all the fuss?

Here are some of the features reviewers chose as the basis for PIE:Writer's excellent performance, and the reasons why you should choose PIE:Writer:

PIE:Writer is fast in executing functions such as search, scroll, page up and down.

PIE:Writer is easy to learn, with an excellent new set of user documentation.

PIE:Writer is copyable to back-up disks.

PIE:Writer can edit either text or programming code.

PIE:Writer is compatible with a wide range of hardware.

And reviewers note that PIE:Writer has refined the most sought-after editing features:

- ✓ wrap/columnar option
- ✓ text marking
- ✓ global word search & replace
- ✓ custom form letters and mailing lists
- ✓ justify right and left
- ✓ status display
- ✓ save or insert text from another file
- ✓ control page breaks
- ✓ cut and paste
- ✓ "Help" screen
- ✓ forward & backward page scrolling
- ✓ automatic centering
- ✓ full format control
- ✓ control page numbering, bottom and top headers
- ✓ underlining
- ✓ tabbing by word or moveable marks

You'll love PIE:Writer too.

You'll find everything you need in PIE:Writer. Whatever you write will be easier to do: reports, letters, books and articles, memos and personal notes. Use PIE:Writer with a 40 or 80 column set-up, many case adapters, hard disks, modems or shift-key modifiers. PIE:Writer works with spelling checkers, Visi Calc* files and can edit program source files.

PIE:Writer gives you efficiency and capabilities far beyond other word processors. You can save valuable time and be more creative with all your documents. And PIE:Writer is an easy transition for typists as well as writers and managers.

You'll be using PIE:Writer the day you install it on your personal computer. Just a few moments with its built-in training lessons and you're up and running.

The experts use words like "powerful," "clean," "formidable" and "graceful" to describe PIE:Writer. But don't take their words for it. Try PIE:Writer yourself and enjoy the ease and excitement of the top-ranked word processor.

The Hayden Advantage.

There's another significant reason to love PIE:Writer: it's backed by Hayden Software, a company with the experience and resources to provide solid products; thorough, user-friendly documentation; and full technical support.

PIE:Writer is part of Hayden's growing "Personal Information Environment" family of software products. The PIE family also includes PIE:Speller, a 20,000 word dictionary spelling checker with a user-defined component. And PIE:Communications, which turns your personal computer into a communications center by letting you send and receive text between your computer and others.

Together with Hayden's other Professional Software products, the PIE family helps you make the most of your personal computer in any environment.

Hayden provides a full range of software for your computer, including business, entertainment, educational and technical products. Visit your local dealer and learn about the Hayden advantage.

wabash[®] diskettes^{for as low as} \$1.29 each!

Now get Wabash Quality at a CE Price

For over 17 years, Wabash has been making high quality and dependable computer products. Wabash diskettes are made to provide error-free performance on your computer system because every diskette has been totally and hypercritically tested. Since you can now buy Wabash computer products directly from CE, the world's largest distributor of magnetic media, you can now get maximum savings on every order. You can even order toll-free.

New Wabash Six Year Warranty

The quality of Wabash diskettes is stressed throughout the entire manufacturing process. After coating, all Wabash diskettes go through a unique burnishing process that gives each diskette a mirror-smooth appearance. Wabash then carefully applies a lubricant that is specially formulated to increase diskette life. Then, to keep out foreign particles, a unique heat seal bonds the jacket and liner together to help prevent contamination. After 100% hypercritical testing and certification, Wabash then packages each diskette, (except bulk pack) in a super strong and tear resistant Tyvek[®] envelope. The final Wabash product is then shrink-wrapped to insure cleanliness and reduce contamination during shipment. Wabash diskettes are so very reliable that Wabash now offers a six year warranty in case of defects in materials or workmanship on all diskettes purchased directly from Communications Electronics.

New...Wabash Diskette Duplication Services

Communications Electronics has teamed up with Wabash to provide a single-source solution for the diskette duplication requirements of software developers, OEM's and distributors. All service is in-house, to give you fast, dependable service. In most cases, delivery can be completed in five days. Whether you require 100, 1,000, or 10,000 copies per week, call CE first for a no obligation price quote. For additional information, please write us on your letterhead with your requirements.

Quantity Discounts Available
Wabash diskettes are packed 10 disks to a carton and 10 cartons to a case. The economy bulk pack is packaged 100 disks to a case without envelopes or labels. Please order only in increments of 100 units for quantity 100 pricing. With the exception of bulk pack, we are also willing to accommodate your smaller orders. Quantities less than 100 units are available in increments of 10 units at a 20% surcharge above our 100 unit price. Quantity discounts are also available.

Order 500 or more disks at the same time and deduct 1%; 1,000 or more saves you 2%; 2,000 or more saves 3%; 5,000 or more saves 4%; 10,000 or more saves 5%; 25,000 or more saves 6%; 50,000 or more saves 7%; 100,000 or more saves 8%; 500,000 or more saves 9% and 1,000,000 or more disks earns you a 10% discount off our super low quantity 100 price. Almost all Wabash diskettes are immediately available from CE. Our efficient warehouse facilities are equipped to help us get you the quality product you need, when you need it. If you need further assistance to find the flexible disk that's right for you, call the Wabash compatibility hotline. Dial toll-free 800-323-9868 and ask for your compatibility representative. In Illinois or outside the U.S. dial 312-593-6363 between 9 AM to 4 PM Central time.

Buy Wabash Diskettes with Confidence

To get the fastest delivery from CE of your Wabash computer products, we recommend you phone your order directly to our Computer Products Division and charge it to your credit card. Be sure to calculate your price using the CE prices in this ad. Written purchase orders are accepted from approved government agencies and most well rated firms at a 30% surcharge for net 30 billing. For maximum savings, your order should be prepaid. All sales are subject to availability, acceptance and verification. All sales are final. All prices are in U.S. dollars. Prices, terms and specifications are subject to change without notice. Out of stock items will be placed on backorder automatically unless CE is instructed differently. Minimum prepaid order is \$50.00. Minimum purchase order \$200.00. All shipments are F.O.B. Ann Arbor, Michigan U.S.A. No COD's please. Non-certified and foreign checks require bank clearance.

For shipping charges add \$8.00 per case or partial case of 100 8-inch flexible disks or \$6.00 per case or partial case of 100 5 1/4-inch mini-diskettes for U.P.S. ground shipping and handling in the continental U.S.A.

Mail orders to: Communications Electronics, Box 1002, Ann Arbor, Michigan 48106 U.S.A. If you have a Visa or Master Card, you may call and place a credit card order. Order toll-free in the U.S. Dial 800-521-4414. In Canada, order toll-free by calling 800-265-4828. If you are outside the U.S. or in Michigan dial 313-994-4444. Telex anytime 810-223-2422. Increase Productivity!

IBM PC™ Utilities

Mainframe Power For Your IBM PC™

TRACE86—This unusual utility program executes compiled programs at a slow speed while dynamically displaying an Assembler version of the code, the machine registers, and the memory contents. **TRACE86** is a fascinating tool for learning and debugging . . . Only \$75.00

COPY PROTECTOR—A software utility that prevents the unauthorized duplication of programs. The normal use of COPY & DISKCOPY commands to duplicate program diskettes is rendered ineffective . . . Only \$95.00

TED—A programmer's text editor. **TED** is similar to editors found on main frame computers (e.g., SPF). Features include: automatic line numbering, moving and copying program lines one at a time or in blocks, inserting code at any location, tabbing, merging designated lines of code from one program into another, printing program listing with or without line numbers, stamping time and date and version number into the code and more. (128K RAM) . . . Only \$95.00

WordStar runs on the IBM PC, Apple Computer with CP/M[®] card and all CP/M[®] based computers. IBM, Apple and CP/M are registered trademarks of IBM Corp., Apple Computer Inc. and Digital Research Inc., respectively.

For the name of the dealer nearest you, phone (800) 227-2400, ext. 948; in California, (800) 772-2666, ext. 948. For more information,

WordStar® is used by more people, more often, to do more things than any other word processing software.

And you'll find it'll do more for you.

The only surprise you'll get with WordStar is how much you can do with it.

Ask Arthur C. Clarke. He used WordStar to write his best selling novel, 2010: Odyssey Two.

Ask Osborne-McGraw Hill. Where the editors use it to produce all the books.

Or, for that matter, ask any of over 400,000 others who swear by WordStar's reliability when it comes to making fast work of the written page.

And no wonder.

WordStar has more work-saving features to take the time and drudgery out of revising and retyping than any other word processing software. For instance, there are production typing features to let you move columns around and merge paragraphs from different documents at the touch of a key. Along with print features like boldfacing and centering to make any late-night typist look like a pro.

But that's not to say you have to be a pro. WordStar starts off by simply giving you a choice, and then guides you with menus every step of the way. Menus adjust to your proficiency. And of course, what you see on the screen is what you get on paper.

Then as your needs grow, WordStar can grow right along with you. With options like MailMerge, SpellStar® and StarIndex™ to help you personalize form letters, correct spelling and create indexes. And with other MicroPro products like InfoStar™ and CalcStar™ so you can automatically insert business data and financial projections into WordStar documents.

WordStar runs on almost every personal computer. Which means you don't have to go out of your way to find the word processing software that can do more for you.

Just take a walk over to your local computer store and ask for WordStar. You'll be on the right path.

MicroPro
software that grows business

Add 3-D to your VisiCALC®

(No, it's not a new graphics package.)

Now, you can get a consolidation system for your VisiCalc program that lets you combine multiple VisiCalc 'pages', and there's no need to learn a new system!

Let us put stars in your IBM PC or PC compatible!

The Installer: Provides the missing link between Wordstar and your printer. Modifies Wordstar to support super and subscripts, variable type sizes and styles, and variable line spacing. Runs from within Wordstar. Supports the Epson MX80, 80 F/T, and 100; the IDS Prim 80 and 132; the NEC 8023A-C and 3550; the Olympus ESW 102 and 103; and the Anderson Jacobson. \$35.

PC Cube: Rubik's for your PC! In the manual mode, you can see all six sides of the cube and can easily rotate faces and rows in attempts to solve the cube. In the demo mode, PC Cube does all the work itself. Only \$19.

Power Planner: An enormous (1999 x 1999) color spreadsheet with true numbers option for 100% accuracy. Supports all features for monochrome, offers 128 different color combinations on an RGB, and supports all features of the Epson MX80 and the HP 7470A plotter. Well documented. Only \$100.

Multiple Regressions: Reads data files created with EDLIN or other text-editing programs, and produces the matrix of correlation coefficients, regression coefficients, R-squared, and the regression ANOVA table. Will handle as many variables and cases as your system's memory and disk capacity permit. Only \$59!

Call for dealer & quantity pricing. Software not wanted. Prepay with check or charge. (Mastercard or Visa) no speed shipment. Satisfaction guaranteed.

ELIZA IS HERE!

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your IBM Personal Computer! Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA turns your computer into a non-directive psychotherapist with whom you can converse much as you would with a live therapist. She analyzes each statement as you type it in and then responds with her own comment or question. Response time is virtually instantaneous, and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new IBM PC version possessing the FULL power and range of expression of the original is being offered at the introductory price of only \$25. And you want to find out how she does it (or teach her to do more), you can buy the complete IBM Disk BASIC SOURCE PROGRAM for only \$20 additional.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

AVAILABLE ON DISK IN TWO VERSIONS FOR THE PC

1. Protected Version . . . \$25
(Protected Version can be run but not listed or modified)
2. Un-protected IBM Disk BASIC Source Version . . . \$45
(Source Version can be listed and modified as well as run)

Both versions include a six page user manual.

Please add \$2.00 shipping and handling to the above amounts
(California residents add 6% sales tax)

ANNOUNCING AN INNOVATION IN TYPING INSTRUCTION.

FUN.

Now PC owners can learn keyboard skills like never before, with MasterType.

MasterType is the typing program that dares to be fun. It combines the fast action of video games with the best instructional program available. The results? Highly motivated and enjoyable learning.

**Two programs on one disk.
One for the office, one for the home.**

Whether you use your PC at home or in the office, MasterType is for you. The color version will dazzle your children as it teaches them to type. The monochrome version doubles your return by improving your productivity at the office. MasterType is one of the best software investments you can make.

But don't just take our word for it.

Infoworld was impressed by MasterType's ability to teach and entertain. They wrote: "MasterType is an excellent instructional typing game. We had fun reviewing it, and we highly recommend it to those who want to learn typing in an unconventional but motivating way."

Infoworld also went on to rate MasterType as Excellent in all four of its review categories.

Order MasterType Today.

MasterType has 18 explosive keyboard lessons to making typing a blast. \$49.95 for the IBM PC. Requires disk and 64K.

PSYCHE™ TALKS BACK

NOW YOUR PC WILL UNDERSTAND YOU

Artificial Intelligence Has Improved Immensely since the 1960's
PSYCHE is a new AI program which will hold a keyboard conversation with you on 60 psychological subjects, including family, marriage, work and sex

Psyche's Responses are grammatical, stimulating, provocative and to the point. It's hard to believe PSYCHE isn't a real person.

Talk It Over With Psyche, instead of your friends. PSYCHE will always listen quietly and never gossip. Tell PSYCHE anything.

Psyche Is Fun & Educational. Suitable as a Rogerian Counseling teaching aid. PSYCHE creates responses that are reflective, nonjudgmental and nonderivative.

Psyche Usually Stays With Your Feelings, like a real therapist, and never judges you, or hands out gratuitous advice. PSYCHE has unlimited time and patience.

Psyche Is Powerful. PSYCHE knows 1000 significant words and answers on almost 500 responses. 150K Program and files. NOT A GAME.

Teach Psyche More. Simple menus let you expand or edit the vocabulary and responses on-line with no programming.

Save & Print Conversations and compile statistics. Machine language gives rapid responses. Seven page manual included.

Show Off Your Computer. Invite your friends to talk with PSYCHE about anything at all. PSYCHE will even GREET THEM BY NAME.

Order by phone or mail. MasterCard, VISA and checks accepted.

THE FIRST P.C. BOND SYSTEM THAT FIGURES ALL THE FIGURES.

Introducing BondMaster. The first personal computer system for fixed income securities analysis that picks up where traditional measures of yield leave off.

You choose your own tax and reinvestment scenario. BondMaster computes the reinvestment consequences and tax implications of all cashflows, evaluating a wide range of investment strategies in seconds.

Prices, Cashflow Yields, Yields To Average Life, After-Tax Yields and More On:

- Bullet bonds
- Pro-rata sinking funds (private placements)
- Mortgages

Model Tax & Reinvestment Assumptions

(Under any tax and reinvestment rate scenario)

- Future values
- Par Bond Equivalent
- Compound rates of return
- True comparisons of all fixed income investment alternatives after taxes and reinvestment of cashflows

BondMaster requires no previous computer knowledge. It's available now for your Apple II®, IBM® Personal Computer or Hewlett-Packard HP Personal Computer Series. Get all the details in a free brochure from Investech, P. O. Box 1006, Jackson, Mississippi 39205, phone 601/355-1335.

LEARN TO SPEAK

Logo is the computer language that's sweeping the country with its simple "turtle geometry" way of learning computer literacy. And Logo. An Introduction is the new, easy-to-understand beginner's guide that makes learning and using Logo fun!

Written in simple language and set in big, easy-to-read type, Logo. An Introduction is specifically designed to be used by teachers and students who have little or no knowledge of Logo or computers.

Logo. An Introduction helps computer novices with

- △ Creating simple shapes with the turtle and combining them to make more complex geometric forms
- △ Learning about "soft" and "hard" saves (temporary and permanent computer memory)
- △ Playing with symmetry and curves
- △ Learning about arithmetic, logic and Cartesian coordinates
- △ Using the idea of recursion—making a simple command repeat itself to perform more complex functions
- △ Experimenting with words and sentences—and more!

Logo. An Introduction doesn't bog you down or scare you with students with complex technical details the way instruction manuals do. Instead, this book is written in an open-ended, exploratory style that captures the flexible spirit and freedom of Logo.

Use Logo. An Introduction as a supplement to your programming manual, as a sourcebook of ideas, as a primer on how to exploit the potential of this powerful language, and as a treasurehouse of suggestions for experiments with Logo. Logo. An Introduction is one book that belongs in your classroom or computer lab—and at only \$7.95, it's easy to order more than one, and

pass copies around to your students. Fill in and mail the coupon today, and enter the exciting world of Logo!

PROGRAMMER'S GUIDE TO CP/M

Edited by Sol Libes

Here's an important collection of CP/M insights that you'll never find in any CP/M manual. CP/M is the most popular microcomputer DOS in use today, and this widespread use has generated many innovative techniques and enhancements of CP/M. *Programmer's Guide to CP/M* tells you what these enhancements are and how to put them to use, how to get around apparent limitations of a CP/M system and why CP/M is far more versatile than you might have imagined. Every article in *Programmer's Guide to CP/M* originally appeared in MICROSYSTEMS between

January 1980 and February 1982. Except for this collection, these articles are now unavailable! *Programmer's Guide to CP/M* gives you an in-depth look at CP/M from the viewpoint of the programmer—the individual who creates the software that interfaces directly with CP/M, or who is installing CP/M on systems for which configurations do not already exist.

Contents include "An Introduction to CP/M," "The CP/M Connection," "CP/M Software Reviews," "CP/M Utilities & Enhancement," "CP/M 86" and "CP/M Software Directories." 200 pages, \$12.95.

In New York, a platoon of PCs has come to the aid of government workers in the never-ending Battle of the Budget.

THE EMPIRE STATE STRIKES BACK

In a warren of offices in the century-old Capitol in Albany, New York, state budget examiners pore over spending requests from dozens of government agencies covering hundreds of facilities, thousands of programs, 200,000 employees, and billions of dollars. They also evaluate the needs of thousands of towns, cities, counties, villages, and school districts that come hat in hand seeking state aid dollars. And they evaluate how much revenue the state can realistically expect to collect with or without higher taxes and fees.

When the annual process is complete, a \$32 billion financial plan emerges for review and action by the Governor and Legislature. To keep track of that \$32 billion, a mainframe computer works best. "We have an in-house computerized budgeting system that runs on an IBM 3033-U12 mainframe," explained Deputy Bud-

get Director Peter Lynch. With about one million entries to control, tabulate, and cross-reference, "the system does an extremely good job at the top end," he said. The mainframe, which is operated by another agency, the Office of General Services, also produces camera-ready copy for summary-level tables that appear in the Governor's annual budget message to the Legislature. The same mainframe is used for such diverse purposes as keeping track of professionals licensed by the Secretary of State and tracking thousands of bills prepared by the Legislative Bill Drafting Commission.

But when it needs to manipulate a few hundred thousand dollars or a few hundred million, the New York State Division of the Budget has discovered that microcomputers are a lot handier than the mainframe. The large system "doesn't respond

LAS VEGAS BLACKJACK™

Be A Winner. Amaze Your Friends. Become a Pro-Class Blackjack Player. If you can beat this game, you can win at the tables. A faithful reproduction of Las Vegas "Strip" Blackjack including multi-deck play (1 to 10 decks), Splits, Double Down, and Insurance bets. Teaches card counting with any card weight and keeps a running count. The illustrated 35 page instruction manual is itself a comprehensive primer on how to play winning blackjack.

Lots of sounds and graphics for realism, including movement of cards and chips. Requires IBM® Personal Computer, 64K memory, IBM DOS, BASIC, and a green screen or color 80 column display. Order your Las Vegas Blackjack, today! Only \$39.95 including postage. (CA residents add 6% tax.)

well to change. It can't be modified easily to pick up nuances," Lynch said.

The large-scale operations of the mainframe require what Lynch described as "rigid and standardized" programming in order for various agencies to share the big computer. The problem is that a mega-enterprise like New York state government isn't uniform and it isn't rigidly stan-

dardized. Budget evaluation and implementation differ dramatically, depending on the agencies' operational needs. For example, institutional agencies such as psychiatric hospitals and developmental centers for the retarded are heavily population-oriented and labor-intensive. In contrast, state-run health programs have heavy nonpersonnel expenses. Within New York's giant State University system, spending needs vary depending on such variables as faculty-student ratios, academic disciplines, and the relationship between graduate and undergraduate programs, Lynch explained.

There are other variables that must be factored in but that may change drastically from year to year. When the state began computerized budgeting in 1972, controlling energy costs was not a major concern; today it is. Another critical variable comes from the Governor's office where policy priorities may change significantly from year to year.

Just as the needs of government programs and agencies vary, so do the techniques of the approximately 230 professionals who evaluate budget requests. "Virtually every examiner's method of arriving at budget recommendations is different," Lynch said. The mainframe is "very good at number-crunching at the top but doesn't serve the individual examiners well," he explained.

Those are the realities that brought the

Budget Division into the world of microcomputers and, specifically, into the world of the IBM PC.

Opting for the PC

The Budget Division studied the possibility of using microcomputers for about a year and a half. The decision to acquire PCs was based on several criteria, according to Lynch, who said the capabilities and "ease of use" of the PC offer "probably the ideal flexibility for our examiners."

The Budget Division experimented first with two Apple II Pluses, but with the arrival of IBM PCs, the Apples are now being used only for special applications, Lynch said.

The Budget Division now has approximately 25 PCs, one of which sits on Lynch's desk. About one-third of them are equipped with Amdek Color II monitors, including Lynch's. The rest, which aren't needed for graphics, use less expensive Zenith monochrome monitors. There are about 16 Anadex Silent Scribe printers scattered throughout the Budget Division, Lynch said. In addition, the Budget Division has 17 Displaywriters, which are used for writing reports, correspondence, and budget narratives.

Although the PCs are a relatively new addition to the Budget Division, they've already been used in various applications. For example, the division uses the micros to keep track of how well agencies are meeting personnel reduction targets, particularly in light of the Governor's directive to trim the size of the state work force

by 14,100 positions. All the summary level information for layoffs was done on the PCs, Lynch said.

In an effort to reduce transportation expenses, the state has tightened controls

THE ISSUE

facing us now is the next generation of spreadsheets.

on the use of its cars. The PCs are being used to track the assignment of state vehicles and their mileage so that replacement costs and scheduling can be projected. In the pre-PC era, that task was done manually, and accurate replacement estimates could not be made for individual vehicles. "Now we can do it by vehicle. We can track the individual mileage," Lynch said.

The PCs offer a special advantage for the Budget Division: work can be brought to a uniform level and data can be automatically transferred between the PCs and the IBM mainframe, according to Lynch. "We need to communicate up and down with the mainframe and across to our word processing equipment. We need a fully integrated system. Although IBM didn't have all the software to make the connections, then or now, I expect they'll

find the standard. The technology is there today," Lynch said.

To help integrate its system of PCs, Displaywriters, and mainframe, the Budget Division has retained an IBM Application Transfer Team to study "how best to link all this equipment," Lynch said. Based on its recommendations, a final choice is expected to be implemented by the fall, when the agency begins the annual round of "budget-making" for the upcoming fiscal year, which starts April 1, 1984.

Self-Supporting Staffer

Aside from the added efficiency and practicality it lends to government operations, the new system is expected to more than pay for itself in savings, according to Lynch. Each year, it costs about \$300 thousand to compile and print the Governor's voluminous budget message to the Legislature. The document—which ran 686 pages for fiscal 1983-1984—details the Governor's budget requests, including how he wants to spend state money and where he expects to find the money to spend. Currently, the mainframe produces the statistical tables but the narrative must be typeset and proofread. "It takes an enormous amount of time to proofread," said Lynch, who estimated that the costs of typesetting and making corrections now account for 75 percent of the project's annual expense.

When the hardware is fully integrated, the mainframe will receive all its data through the PCs. The Displaywriters also will dump text into the mainframe which

WHAT ARE FRIENDS FOR?

In effective DP management, a true *friend* is one who'll help you get the most from your IBM-PC™ micro-computer. FRIEND™, the Report Generator, is your new friend in integrative software—one who'll be there when you need it most.

A FRIEND LOOKS OUT FOR YOU

FRIEND helps you *relate* to your dBASE II™ system—making the complex commands needed to build reports short and sweet. It also reads up to 15 data files simultaneously—COBOL, BASIC or dBASE II™ files, in any combination—including files from systems developed by dozens of other leading software companies. FRIEND saves you the effort of learning a new language or procedure for each new application. Before, only mainframe products gave you this kind of power.

A FRIEND PITCHES-IN TO HELP

A good friend saves you time and money too. FRIEND lets you tailor reports to the needs of key decision-makers. It cross-tabulates, accumulates, calculates, sorts, and formats all on a single pass through the data. And you can get all of this *with or without* programming expertise. FRIEND makes you, your computing staff—your entire organization—more productive.

A FRIEND IS EASY TO TALK TO

Using FRIEND's non-procedural, English-style language is more like chatting with a business consultant than programming a computer. You're free to follow your hunches, scout out trends, use your intuition. And when you've digested the facts you need, you'll make better and faster decisions.

Like any good friend, FRIEND the Report Generator won't hold you up while it helps you out. FRIEND is reasonably priced and available by mail or from your favorite computer store. Stop in and ask them some friendly questions, or contact us directly.

After all, that's what friends are for.

FRIEND™

PCA-2

then will merge the data and text, eliminating the need for typesetting. Using the Budget Division's existing staff, Lynch said his agency will be able to do all the editing and proofing itself, thanks to the integrated system.

The switch to PCs and integration of the microcomputers, Displaywriters, and mainframe cost about \$200 thousand, Lynch said. This investment will quickly pay for itself, he predicted. "I expect to recoup it within 2 years just in savings in printing costs alone."

Software Choices

Second to electronic data management, a spreadsheet is the next most important thing, Lynch added. The spreadsheet is a budget examiner's central fiscal planning tool, and an electronic spreadsheet makes it easy to manipulate data.

For its spreadsheet needs, the Budget Division decided on VisiCalc. According to Lynch, VisiCalc provides ease of use at the individual level while allowing the agency to conform examiners' data to a single large database. "It will go a very long way in solving most of our applications problems, but we don't want to stand still," he commented.

Although no changes in the use of VisiCalc are planned, at least through completion of the fiscal 1984-1985 budget, the Budget Division isn't shutting its eyes to new developments in the quickly evolving field of spreadsheet programs. "The issue facing us now is the next generation of spreadsheets," Lynch explained. Right

now, the agency is experimenting with Lotus 1-2-3 and intends to test other spreadsheet software as well. "We plan to put a team of users on it to advise us," he said.

Special Capabilities

Looking ahead, the Budget Division will need software that can "immediately" translate spreadsheet entries into graphic form. With that capability, "what-if" scenarios can be more easily compared

include past returns on investment by type of tax—sales, corporate, personal income, or estate—size of business to be audited, and the number of auditors presently assigned to that tax. Also factored in would be the projected saturation points at which added staff would produce only marginal increases in revenue. With a graphics display, "we can experiment with different mixes and see the results on a line or a bar chart."

Although such graphic displays will be helpful to the budget examiners who must wrestle with a particular problem and suggest solutions, the importance of instant graphics goes beyond the Budget Division's own professional staff. Graphics are "even more useful for the policy people who have to make the decisions," Lynch explained. Often they are political people who may not understand how to read a spreadsheet, but who can compare charts and understand how variables account for the differences. "When we do 'what-ifs,' they can look at graphics rather than numbers," he continued.

The Budget Division is also using VisiCalc's companion software, VisiFile. With VisiFile, examiners can monitor budget "add-ons," get projects added by the Legislature to the budget. "We get a lot of calls on these from constituent groups and legislators wanting status reports on whether the money is being spent and how," Lynch explained. With VisiFile, the Budget Division can answer those questions. He said the data on the add-ons is stored in the microcomputers according to a variety

A LARGE
*staff can't be expected to
adapt overnight to a
shift to
microcomputers.*

and evaluated, Lynch said.

As an example of how that capability would be useful, Lynch described a hypothetical state Taxation and Finance Department problem in deciding how to deploy 100 extra tax auditors. The bottom line is to find what mix of auditors would deliver the best return on the state's investment, what assignments would bring in the most money in relation to the salaries and expenses incurred by the auditors. In the analysis, variables would

We have developed an 8" diskette system called "THE FILE CONNECTION" that can be used to exchange source, data, and word processing files between the IBM PC and hundreds of other computer systems. We use a modified IBM diskette controller card to attach either 1 or 2 external 8" drives to the IBM PC. Our utilities work with all IBM models including the 3741, 5120, S/1, S/34, S/38, S/370, 43XX, and Displaywriter. Other systems include DEC, NCR, TRS80, Univac, Burroughs, Honeywell, and CP/M.

Our programs provide automatic format identification and accept diskettes with 1 or 2 sides, single or double density, and 128, 256, 512, or 1024 bytes/sector. Source file reformatting and ASCII-EBCDIC conversion is included. The diskette can also be used as a 1.2 Mbyte or 320 Kbyte DDS drive.

The complete system price including TANDON B48-2, enclosure, cable, and basic utility programs is \$1295 for one drive and \$1995 for two drives. For users who want to use their own drives, the basic utility programs and documentation are available for \$695. Payment is by check or CDD with delivery within 10 days.

See our ordering instructions below.

Take a closer look

When we say faster, we mean instantly. Paging, searching, reformatting—they all work instantly, speeding you through your work. Textra is easier to use because it's an original design for the IBM Personal Computer. It has labeled function keys instead of awkward "control codes", full use of the cursor moving keys, and a list of features that just won't quit.

Features

- full screen editing
- modelless insert and delete (overstrike and undelete also available)
- powerful search and replace
- copy and move blocks
- tabs, margins, word wrap, auto-indent, paragraphs, line shifting and centering
- extensive reformatting abilities
- full printing capabilities including print-while-you-edit, page numbering, headers, footers, and much more
- numerous other features which make your time at the keyboard more productive
- word processing or program editing

Watch our documentation

Relax. Sit back and watch it. Dim your lights a little and let it roll. Our 'on-line tutorial' is a series of short films which automatically roll by on the screen, showing you how to use Textra. In less than an hour, you'll be using Textra efficiently. Of course, a thorough reference manual is included if you have any questions.

CAUTION: Textra is addictive. If you already have another word processor, you might be into antique collecting.

\$95

Textra requires PC DOS and 64K (DOS 2.0 requires 96K) and a monochrome or color monitor.

Textra works with the COMPAQ Portable Computer.

You Don't Play Games With Your Business. Neither Do We!

THAT'S WHY WE OFFER ONLY THE FINEST IN INFORMATION MANAGEMENT AND APPLICATION SUPPORT SYSTEMS

DDQUERY - the system that defined performance for Information Management systems unfamiliar with the term. What they have failed to grasp is the nature of performance itself. Which is not just ease-of-use, or power, or speed or flexibility, but all of these working in tandem. And that is also an excellent definition of DDQUERY.

With DDQUERY, you can:

- Use simple English to retrieve information from multiple sets simultaneously. Substring extractions. Wild card searches.
- Design attractive screens (linking, bells, color, etc.). Customized screen layouts with automatic editing and integrity checking.
- Protect data with data set and field level access controls.
- Use a structured programming language which supports applications development including sorting, conditionals. Move with automatic conversion and software registers, even arrays for reporting and transaction processing.

All this in a single, neat, user-friendly package offering greater capability and versatility than ever on a micro-computer.

For more information on DDQUERY for your IBM Personal Computer or the IBM Series/1 or Perkin-Elmer 3200 Series, call (303) 773-1805.

of indices. For example, their status can be retrieved based on which legislative house first passed the measure, by title, by the government agency that administers the project, and by the Budget Division unit responsible for overseeing its spending.

Training Personnel

As with any major organizational change, a large staff can't be expected to adept overnight to a shift to microcomputers, even a shift to user-friendly ones.

Some of the Budget Division staff had previous exposure to computers, especially examiners who were in college or graduate school recently. Others were familiar with the mainframe terminals in the Budget Division offices. However, even these groups generally were unfamiliar with the use of personal computers. As a result, the Budget Division contracted with Arthur Anderson & Co. to provide 2 days of training on the PCs for about 260 employees, all the professionals, and some of the clerical staff. The training program covers the use of the PCs and VisiCalc.

A goal of the training program is to help employees overcome psychological objections to using personal computers. "The biggest problem," Lynch said, "is getting past the mental barrier, which says, 'It's only a little bit of information. I'll put it on paper.' But soon you have seven or eight changes on pieces of paper."

While diversity of style is one reason that the Budget Division decided to acquire PCs in the first place, it does pose some problems in the early stages as employees try to acclimate themselves to personal computers. "Each of our employees does everything a little differently. They're finding it's a challenging course, and some are having trouble taking the information and seeing where it would apply to their individual jobs," Lynch said. "We have to give them the basic tools and understanding of how it works, then let them develop their own applications," he said.

To help resolve troubles, the agency intends to hold information-sharing sessions every 2 weeks where one budget examiner will sit down for 1½ to 2 hours and explain to colleagues what applications he or she is using the PC for. Those discussions will cover how each application was put up and what problems had to be overcome for each application. /PC

Managing the proliferation of disks has just become a lot easier with PC/CMS

PC/CMS is a fast and efficient catalog management system that maintains a master catalog index of all files created within your system, thus relieving you of the mundane task of tracking and locating files by the old fashioned trial and error method. PC/CMS, unlike most other catalog systems, has been designed to expand its capacity along with you, thus conserving valuable time and resources.

Some of the features of PC/CMS are:

- ☐ MENU DRIVEN AND USER FRIENDLY ☐ DYNAMIC FILE AND MEMORY ALLOCATION
- ☐ AUTOMATIC CATALOG ENTRY ☐ APPLICATION INTERFACES ENABLING DYNAMIC FILE SEARCHING ☐ COLOR AND FUNCTION KEY SUPPORT ☐ HARDCOPY PRINT UTILITY
- ☐ WILD CARD SEARCHES ☐ MAINTAINS AND TRACKS ALL PERTINENT DIRECTORY INFORMATION SUCH AS:
- Volume Identification • Date and Time Stamp Information • File Size and Sector Address Information • File Type (i.e., Single or Dual Sided, etc.) • File Status (i.e., Hidden, System, Program, Data, etc.)

PC/CMS is a bargain at only \$50.00 and will pay for itself many times over as your needs grow. It can be purchased from your local IBM PC dealer or can be ordered directly by sending a check or money order to:

TECHNOLOGY
SYSTEMS
ORGANIZATION
INC.

TSO

1590 S. DEER CROSSING DRIVE • DIAMOND BAR, CALIFORNIA 91765

Dealer inquiries invited. Visa and Mastercard orders may telephone direct at (714) 861-2523. California residents please add sales tax.

PC/CMS requires an IBM® PC with 80K, DOS 1.1, color or monochrome monitor and disk drive.

IBM is a registered trademark of International Business Machines.

CIRCLE 417 ON READER SERVICE CARD

MoneyTrack is uniquely right...for some people

This new program makes it easy for you to do your own books. You can get all the obvious advantages of doing it yourself even if you know nothing about accounting—or bookkeeping.

Is MoneyTrack for you?

Only MoneyTrack is designed specifically for people with multiple sources of income, an interest in several ventures. For the doctor, lawyer, dentist, CPA. For the entrepreneur, owner of a small business, farmer, developer, general partner, agent, business manager.

Only with MoneyTrack can you keep complete, simultaneous records for activities like these:

● A small business and its related funds (like pension and profit-sharing funds) and all your personal finances (stocks and

bonds, rental properties, trusteeships, etc.).

● A series of general partnerships, with separate records for each limited partner and for each profit center.

● A farm, treating each crop and each herd as a separate profit center.

● A retail store, treating each line as a separate profit center.

The "home accounting" programs aren't powerful enough to handle all this. The corporate general ledger programs are too cumbersome. Only MoneyTrack is the answer.

Powerful features for important matters

Here are just a few of the many features that make MoneyTrack unique:

▶ **Capacity.** You can track up to 99 sources of money, up to 99 businesses or ventures. All share a 900-account general ledger.

▶ **Extensive logic.** MoneyTrack simplifies complex transactions—like closing a real estate deal. For example, you can distribute a payment to as many as 18 accounts and MoneyTrack will make sure the transaction is balanced before you can file it.

▶ **Complete records.** When your accountant suggests a change in income or expense classifications, you can modify any record because the complete detail is on file. And MoneyTrack will flag the change.

▶ **Pinpointed analysis.** You can limit MoneyTrack's many detailed reports by dates, accounts, funds, businesses.

▶ **Check printing.** You can specify up to nine print formats to match check formats you now use.

Above all, ease of use

Just a few of the reasons...

▶ **Operating system.** No matter what operating system you're using, you can use MoneyTrack easily, simply—because MoneyTrack contains its own operating system. You insert the disk, press three keys, and start to work immediately.

▶ **One menu—**and no intermediate files to slow you down.

▶ **Data entry.** Big-system programming—over 11,000 lines of source code—makes data entry logical, consistent, simple; it anticipates your needs and problems, prevents errors.

Discover MoneyTrack's real value

MoneyTrack costs under \$500—and will save you several times that each year just in CPA write-up charges. But to appreciate how much it can do for you—its real worth—you must see MoneyTrack in action.

Nothing easier. You can get a free, no-strings demonstration on any computer and software stores.

Or just send us the coupon. We'll send you two teaching demo disks that show exactly how MoneyTrack works, what it

can do for you—and will give you a head start when you use the system.

The \$45 cost applies in full to the purchase price. If you don't buy MoneyTrack, return the disks and we'll refund \$30.

Call us with any questions—or for credit card orders. Pacific Data Systems, Inc., 6090 Sepulveda Blvd., Culver City, CA 90230, (213) 559-8713.

COMPARE AT ANY PRICE

INTELLICOM (an INTELLigent Communications program)

INTELLICOM provides you with the capability of very intelligent computer to computer communications from both a terminal emulation and file transfer standpoint. INTELLICOM supports several file transfer protocols that facilitate the transfer of both binary and ASCII data and files. Since INTELLICOM is menu driven, it is a breeze to use and understand. IT IS USER FRIENDLY.

With INTELLICOM you will be able to communicate with the various data and timesharing services such as The Source and CompuServe. Additionally, since INTELLICOM supports the protocol used by virtually all remote CP/M systems around the world, all users can immediately begin to take advantage of the wealth of public domain software available on these systems. Current, or potential, users of CompuServe can transmit and receive both binary and ASCII data with full error detection and recovery.

The checksum protocols allow for the verification of data blocks transferred (assuming appropriate support on the host end). This feature will be of great value in those applications where data integrity is paramount. INTELLICOM's documentation includes a detailed description of all protocols used along with machine readable examples of host pseudo code that will greatly ease the task of implementing support for INTELLICOM on any existing in-house mainframe (IBM, Dec, Wang, ...).

Actual INTELLICOM menu is illustrated below:

- T - Terminal emulation
- U - Terminal emulation with data capture
- V - Toggle local echo (off)
- S - Checksum protocol file transmission
- R - Checksum protocol file reception
- A - ASCII file transmission
- B - ASCII file transmission - PTR/PTP protocol
- C - ASCII file reception - PTR/PTP protocol
- D - Toggle local display (on)
- W - CompuServe Executive Terminal
- X - Intel Hex file transmission
- Y - Intel Hex file transmission - PTR/PTP protocol
- Z - Invoke DiskFile function menu
- E - Exit program

INTELLICOM requires PC DOS 1.1, one disk drive and either a modem or direct communication to another computer.

PROFOUND PC PRODUCTS

XENO-COPY 2.0™

Now you can transfer files to your IBM PC or PC XT from your other computer disks without any additional hardware required!

All you need is the disk! Previously, file transfers between different computers required expensive modem programs and additional hardware, not to mention the hassle of serial file transfers. XENO-COPY allows direct disk-to-disk file transfers at a fraction of the cost with no complications.

Suppose you have a PC at the office and use a portable computer in the field or have a non-IBM PC computer at home. Leave those computers where they are, and just take the disk to the office. Run XENO-COPY™, then insert your source disk in one drive and a formatted PC-DOS disk in the other drive. Select the files to be transferred and watch it happen. No modems, madness! XENO-COPY is fully menu driven and easy to use. Compatible with different drive configurations, DOS 1.1 and 2.0, and hard disks.

XENO-COPY directly transfers disk files from Kaypro II, Lobe CP/M, Morrow Designs S5, NEC PC8001a, Osborne DD, Quark, Superbrain, Xerox 320 II S2, TRS-80 III CP/M, Xerox 320 II DD, Zenith/Health w/Magnolia. Other formats being added. New version 2.0 with IBM CP/M-86 capability.....\$99.50

THE ORIGINAL KEYFIXER™

Precision molded collars fit into existing ENTER, TAB, BACKSPACE, and both SHIFT KEYS to increase accuracy and reduce fatigue. Unique design does not change key height. Imprinted with "ENTER" as in IBM doc. Original equipment gray color matches existing keys.

Set of 8only \$14.95

KEYSWAPPER 2.0™

Let us modestly point out that additional new features makes KEYSWAPPER 2.0 the most advanced keyboard MACRO utility on the market.

You can now define any series of keystrokes or commands as MACROs. You can even define and record a new MACRO during another program. Temporarily suspend or reinvoke MACROs. Store MACROs in printable/editable text files. Display "help menus" and MACRO definitions during another program. Many other optional features like Date and Time Display at Cursor, etc.

KEYSWAPPER 2.0™ incorporates version 1.2 Typing Utility features. Move or change any key function, even switch to DVORAK Spreadsheet users can use numeric keypad and cursor keys at the same time! Add (00) to the keypad. Audible "beep" on Capslock and Numlock activation. Touch reset of Capslock like a typewriter. Easy to use menu driven configuration. Put convenience back into your PC.

Works with both PC & XT, under DOS 1.1 and 2.0. Transparent and compatible with 1-2-3, VisiCalc, Wordstar, and most other programs\$69.95.

KEYSWAPPER 1.2 typing utility only is still available at\$39.95

dBASE II

\$398

The most widely sold DBMS for micros, dBASE II defines the state of the art. An inexperienced user can create a dBASE file, begin data entry, and print out a report in minutes; the experienced programmer can create complex program systems using dBASE'S unique programming language. Both can use automatic program generators and other programming tools to create applications quickly and easily.

QUICKCODE: Automatically creates menus and "intelligent" data entry screens which check input for correctness. Eliminates 80-100% of dBASE programming time! **\$185.00**

dUTIL: Formats programs to make them easier to read, detects some errors and combines program files to make them run fast! **\$59.00**

dGRAPH: Allows you to see your dBASE file in graphic form—a real aid to understanding. **\$195.00**

ABSTAT: Allows you to analyze your data using a wide variety of statistical tests. Can be used with dBASE files or by itself. Also does bar graphs and plots. **\$359.00**

Condor 3

\$398

dBASE II's leading rival, Condor 3 is a relational DBMS with powerful query and report generation capabilities similar to those on main frames.

Condor 1: Lacks the query and report generation facilities of Condor 3. Excellent for simpler applications. **\$189.00**

1-to-3 upgrade: When you need more power, this low cost kit will get you there. **\$225.00**

The Lattice C language compiler may be the best ever launched for the PC. Its precise error messages help steer C programmers to clear sailing.

IS LIFEBOAT KING OF THE C'S?

Lattice C Compiler

Lifeboat Associates
1651 Third Avenue
New York, NY 10028
(212) 860-0300

List Price: \$500, C-Food Smorgasbord
\$150

Requires: 96K, PC-DOS, two disk drives.

CIRCLE 700 ON READER SERVICE CARD

While the best of the latest applications and games software might be characterized as "exciting and novel," when describing a compiler, "neutral and predictable" are high words of praise. The Lattice C compiler is exactly that: neutral, predictable, and without surprises. It is also perhaps the best C compiler available

for PC-DOS.

The C language is favored by many professional software developers because it combines some advantages of a high-level language—portability from one computer to another and ease of structured programming—with many of the advantages of low-level languages, such as speed and easy access to the computer hardware. If you are not familiar with the C language, check the standard reference and tutorial text, Kernighan and Ritchie's *The C Programming Language* (Prentice-Hall, 1978).

Five of the growing number of C compilers available for the PC were reviewed in an earlier issue of PC ("Five C Compilers" Volume 1 Number 10). Point by point, the Lattice compiler compares

PASCAL PROGRAMMERS

Blaise Computing's productivity tools allow the IBM Pascal programmer to develop reliable software taking full advantage of the capabilities of the IBM Personal Computer. All packages have a comprehensive Reference Manual, extensive examples and sample programs.

VIEW MANAGER \$275

The screen support system of a mainframe for the IBM Personal Computer. Screens are constructed with a powerful Screen Painter supporting any attribute or color, and the screens are stored efficiently in a Screen Database. A Pascal unit supports access to screens and true block mode data capture and display. Demo diskette and User Manual \$35.

TOOLS \$125

Total string capability, complete screen access, keyboard handling, a graphics interface, access to all BIOS functions, and much more is provided in 45 procedures. Six units are carefully crafted and documented to give you the information and flexibility you need. Everyone using IBM Pascal should have TOOLS. User Manual \$40.

SOURCE CODE INCLUDED

TOOLS 2 \$100

The power of DOS 2.0 is supported using high level Pascal procedures. Program chaining, DOS internal and external command execution, use of all available memory, extended file handling, and other utilities are some of the features provided. A general DOS gate allows you to access any DOS function from Pascal. These are the extensions to Pascal you have been waiting for. User Manual \$40.

SOURCE CODE INCLUDED

VIEW MANAGER, TOOLS and TOOLS 2 run on the IBM Personal Computer and the XT. TOOLS 2 requires DOS 2.0, TOOLS and VIEW MANAGER can be used with any version of DOS.

favorably with the best of them.

Since portability is one of the language's strongest attractions, a good C compiler should conform closely to the de facto standard, defined by the Kernighan and Ritchie book. The Lattice C manual details the differences, which are minor, between this version and the standard. One class of changes makes this implementation a bit stricter about pointer manipulation: Lattice C makes a firm distinction between a pointer to an object and a pointer to the first element of the object. Also, pointers are "typed"; that is, if a variable declared as a pointer to one type of object is assigned the address of another type of object, a warning message will be generated.

The other significant change allows members of different structures to have identical names, which implies that references to structure fields must be complete enough for the compiler to determine exactly which structure is being referenced. These changes do not significantly affect portability; they do, however, discourage programmers from using certain unclear programming constructs of dubious desirability.

Error Diagnostics

The usefulness of a compiler is directly proportional to the help it gives in writing good, working programs. Thus, clear error diagnostics, which accurately pinpoint mistakes in a program, are highly desirable. The Lattice compiler gives reasonable, precise diagnostic messages, but it doesn't recover well after finding an error. I usually received several spurious messages for each legitimate error. This slowed down the debugging process, because I could trust only the first message. I found myself compiling a program with five minor syntactical errors six times. Given that Lattice C is an otherwise bluish-free product, this is a major annoyance. On the bright side, the manual lists and explains the diagnostic messages; this was a serious omission in other C compiler manuals. It was reassuring to read that an "object file error" simply meant that my floppy disk was out of space. Other manuals often leave the meaning of diagnostic messages to the programmer's imagination.

The C language, good as it is, is not appropriate for all situations, so the ability to mix routines written in another lan-

guage into a C program is important. The Lattice compiler makes it easy. Not only is its function-calling sequence straightforward and well documented, but the compiler produces PC-DOS object files and uses the PC-DOS linker, which makes it much easier to use a mix of languages. A sample assembly language program is supplied with the compiler to illustrate this capability.

Floating point numbers are represented in the proposed Institute of Electrical and Electronics Engineers (IEEE) standard format, which is compatible with the Intel 8087 chip, although the compiler does not support use of the 8087 itself. Floating point errors can be detected by the user program; this seemingly minor feature, often forgotten by compiler writers, is of crucial importance in writing robust application programs.

Lattice C's limited memory utilization, although no worse than other available compilers', is a real disappointment. No single data object (should I call this a datum?) may be greater than 32K bytes, and the total data space (including stack and heap space) is limited to 64K. Similarly, 64K is reserved for machine code. Many otherwise fine application programs currently on the market, principally word processors and spreadsheets, are

THE LATTICE
manual is very good
indeed. All my questions
had been anticipated
and were answered.

limited by their small data space. This is in part because no available compiler allows programmers to easily access the full complement of RAM. A compiler that actually supported the full megabyte addressing of the 8088 chip would be a real boon: Lattice C does not.

The Lattice manual, on the other hand, is very good indeed. I was impressed by the fact that all my questions had been anticipated and were answered. What's the maximum object size? 32K. The floating point format? IEEE. How do I pass arguments to an assembly language sub-

Lee McFadden makes learning to use your computer and its programs an easy, rewarding experience.

Mastering a new system or even a new program is not easy. It takes a lot of study, a lot of trial and error, a lot of back-and-forth between dense manuals and your computer. Wouldn't it all be so much easier if you had a knowledgeable friend sitting by your side?

Lee McFadden is that friend. He's been producing widely acclaimed teaching tapes for over ten years. He knows what information you need, and exactly when you need it. Team his skill with the know-how of technical experts, and you get a faster, easier way to master your computer and all its power.

Patented Audio Cassettes

Lee guides you patiently, step-by-step, while you're sitting at your keyboard. No connection between the computer and your cassette player is necessary. You learn by doing, instead of by reading. And even the tapes are special—a patented FlipTrack system lets you go at your own pace,

covering as much or as little detail as you want.

Ideal for Training

Use the courses over and over again. Share them with friends, family, students and staff. Make "computer literacy" a reality in your local schools. Bring a new employee "up to speed" in just hours, instead of weeks. The fully indexed Guide included with each course is, by itself, an invaluable, on-going reference.

Moneyback Guarantee

You may order any of the FlipTrack courses from us on a 15-day "right of return" basis. Try a lesson or two yourself. Share them with others. If you're not delighted at how quickly and easily you begin to learn, simply return the program in its original condition for a full refund. No questions asked.

How to Order

Drop by your local dealer for a demonstration. Or Visa and MasterCard holders may add \$2.50 shipping and handling to the prices, and order toll-free:

PROLOK™ protection means software security.

User-transparent protection technology that *works*—right on the disk.

PROLOK protection is a tested technology that customizes a quality diskette with a unique 'fingerprint' before software is installed. (PROLOK diskettes are guaranteed to meet or exceed all ANSI standards for floppy diskettes.)

Tough to break

Bit and nibble copiers are ineffective when you utilize PROLOK diskettes. This eliminates the threat of mass by-pass or unlock schemes.

Easy to use

PROLOK protection is invisible to the legitimate purchaser. End users are not locked to a specific configuration or machine. The technology is not hardware dependent.

Protection plus

Back-up copies may be made but will only work on the PROLOK disk. Protected files may be transferred to and run from *hard disks*. Leading mass duplicators already support the PROLOK process.

Inexpensive to buy

PROLOK protection is low cost insurance for your software...

quantity 1 to 10,000 or more. An evaluation diskette is just \$9.95 including postage and handling.

Available now

We're now shipping for IBM PC and XT, Atari, Apple and selected CP/M systems. Call or write for your PROLOK evaluation disk today:

CIRCLE 438 ON READER SERVICE CARD

routine? This is thoroughly explained. The manual includes both a table of contents and an index. The compiler's error messages are listed and explained. The code generator is outlined, as are the

THE C-FOOD *Smorgasbord is an optional package that includes a few bad puns and several handy functions.*

workings of the library functions.

One of the biggest headaches in switching to a new compiler, even if you're familiar with the language, is discovering all the little implementation dependencies. The Lattice C manual does an outstanding job of reducing this difficulty. It presents a point-by-point comparison with the Kernighan and Ritchie standard. This is the best manual I have seen for any C compiler available for the PC. The Kernighan and Ritchie book is included with the compiler—another nice touch.

Function Libraries

The C language makes no provisions for input or output to files, the keyboard, or the screen. These vital functions are to be provided by a library of subroutines or functions. Portability considerations make a standard, UNIX-compatible library very desirable, and this is exactly what Lattice delivers. The function library supplied with this compiler contains the complete UNIX-compatible standard functions, plus a few more. These extra functions, which include pattern matching and parsing utilities, would be useful in writing a command processor or a compiler's lexical analyzer. The source code for the library is not supplied with the compiler, but can be obtained for an additional charge.

No PC-specific functions are supplied with the compiler, but some can be found in the C-Food Smorgasbord, an optional package (available for an additional charge) that includes a few bad puns and several handy functions to help develop-

ers get their C-legs. (The Smorgasbord manual assumes you appreciate low humor; those who can't stomach C-puns might find themselves getting C-sick.) The Smorgasbord functions are divided into several categories.

1. Decimal arithmetic. In contrast with the more familiar floating point arithmetic, this style of arithmetic does not suffer from rounding errors. Despite its slowness, it is attractive in business applications (where pennies count) and to users who are wary of numerical approximations. The Smorgasbord includes multiplication, subtraction, addition, division, trigonometric, square root, logarithmic, exponential, and comparison functions. A set of conversion functions is also provided to convert from/to decimal format to/from ASCII and binary format.

2. Low-level, unbuffered, byte-oriented I/O functions for keyboard input, screen output, printer output, and asynchronous communications. These simply call operating system routines.

3. Low-level, unbuffered, byte-oriented I/O functions that do more or less the same things as the above functions, but do so by calling the ROM BIOS routines and device drivers instead of the operating system's routines. Close control of the display is possible using these functions.

4. Another set of functions to make working with terminals easier. Remember terminals? Older microcomputer systems were often hooked up to completely separate terminals. Since the brand of terminal differed from system to system, the programmer was left with the nasty problem of making a program work with many dif-

M_{ANY}
otherwise fine word processors and spreadsheets are limited by their small data space.

ferent available types of terminals. The Terminal Independence Package (TIP) makes this task easier by providing a single interface to the program that translates commands to the specific escape codes

How FORTH level 2 makes your PC 412% more powerful

What used to take 40 hours can now be done in 7.8 hours — that's 412% — and it is only one way of measuring power. There are others — convenience, debugging ability, run-time, compile-time, memory size... name it! FORTH level 2 will increase your power because it provides an interactive, integrated environment which promotes immediate debugging and modular design. Other benefits such as real-time performance depend on the quality of the implementation. Not all FORTHs are equal, so compare before buying. This one is a subset of polyFORTH, designed by FORTH, INC., tested and proven in the field for more than 5 years.

At last it is available at an affordable price of \$149 — and features the following:

■ **Multitasking**

Any number of background tasks. Concurrent operation of monochrome and color monitor. Concurrent printer operation.

■ **Compatibility**

IBM DOS file interface utility allows access to files created under IBM DOS with FORTH's improved performance and power.

■ **On-Line Documentation**

As well as over 700 pages of supporting documentation including *Starting FORTH* by Leo Brodie and *360-page User's Manual*.

■ **Turkey-compiler™**

Utility for making binary turnkey applications. Such programs can be reloaded without license fee under specific conditions.

Options:

■ 8087 support	\$89
■ Osta Base support	\$75
■ Report Writer	\$25
■ Documenter	\$75
■ Multi-User capability	\$129
■ Graphics module	\$100

This is not a complete list and you may have questions not covered in this material — give us a call! We will address them and send you a brochure.

Act now! After all, if this is the right software tool for you, shouldn't you know about it?

CIRCLE 239 ON READER SERVICE CARD

Figure 1: Benchmark results for three C compilers. Results for IBM's Pascal and BASIC are included for comparison.

COMPILER	Large Compile	-----Sieve of Eratosthenes-----		
		Compile	Runtime	.exe File Size
Lattice C	3:10	1:05	0:11.1	19,328
c-systems C	15:15	1:28	0:15.0	24,960
CI-C86	4:02	1:25	0:17.3	12,872
IBM Pascal (compiled):			0:12.0	32,512
IBM BASIC (compiled, standalone):			0:16.0	18,432
IBM BASIC (interpreted):			33:57.0	ne

necessary to drive an attached terminal. However useful this may have been 3 years ago, most new microcomputers (like the IBM PC) feature integrated, memory-mapped displays. The TIP is unnecessary in dealing with recent computers.

5. Finally, the Smorgasbord includes several miscellaneous functions that provide such services as file directory manipulation and access to the system clock.

Documentation for the Smorgasbord is not up to the level of the compiler's; in particular, the explanation of the Terminal Independence Package is quite

sketchy. Also, the Smorgasbord and the compiler predate PC-DOS 2.0; gaining access to the newer PC-DOS function calls and hierarchical directories remains a task for the programmer.

Speed Tests

It is a truism among programmers that the speed of one's program depends mostly on the sophistication of the algorithm; other factors, including the speed of the compiler, are secondary. Nevertheless it is desirable to squeeze every bit of performance out of the computer, and an effi-

cient compiler helps. To get some idea of Lattice C's efficiency, I ran a couple of benchmark tests.

The algorithm used for the run time and file size comparisons in Figure 1 is the popular Sieve of Eratosthenes prime number calculation, the same algorithm used in "A High-Level Language Benchmark" (Byte, September 1981). This was a very small program (about 30 lines), so compilation times were near the compiler's minimum. The compilation time figure includes time for linking the executable file. Note that the size of the file does not reflect the compactness of the compiler output; it depends mainly on the size of the library routines automatically linked into the file. The Large Compile benchmark measured the compilation and linking time of a 500-line C program; the other three figures apply to the Sieve program.

Judging from these results, programs are compiled faster by the Lattice C compiler, and it produces programs that run faster than any other C compiler available for PC-DOS.

Comparing the Compilers

Given that Lattice C compares favorably in speed and quality to the best of the previously reviewed compilers, which should you choose? The Computer Innovations Compiler, CI-C86, doesn't have the same level of polish, and doesn't run as fast, but it also supports the full C language. In fact, it comes closer than Lattice C to meeting the Kernighan and Ritchie specifications. It comes with a somewhat larger library of functions, including trig

helps.

functions and Intel 8087 support functions, and the source code for these functions is included at no extra charge. Its error messages are not documented, but the compiler's checking algorithm is

INTRODUCES: PC—VSAM™

- one of the most comprehensive and versatile I/O programs available with power and performance to match that of the IBM-PC.®
- uses sophisticated and easy command language that allows flexible and efficient storage of information.
- meets the challenge of today's complex system and application needs while saving time and money in development.

SYSTEM REQUIREMENTS: IBM-PC®, DOS, 64K RAM, ONE DISK DRIVE-5¼", 80 COLUMN DISPLAY, OPTIONAL PRINTER

INTRODUCTORY PRICE: \$155.00

(Offer good through Sept. 7, 1983)

In order to enable us to market the most economically priced software we use functionally-inexpensive packaging.™ Thus, passing the savings on to you.

smarter—it produces few spurious messages. The author of CI-C86 is known for being easily accessible; technical support for Lattice C is provided by Lifeboat Associates, not the authors. On the negative side, CI-C86 uses a nonstandard linker, which makes interfacing to assembler routines awkward. Both of these compilers are widely used, and each has its fans. The CI product, though, is less expensive.

A desirable compiler of a very different sort is the c-systems product. It produces assembly language files that must then be run through the IBM Macro Assembler. This is beneficial if you need to integrate C programs with assembler programs, but it's generally a severe disadvantage as compilation will take significantly longer. The most interesting feature of the c-systems compiler is its extra-cost c-window package, a symbolic source-level debugger that allows you to trace a C program as it runs. There is a very definite trade-off here between those compilers that run quickly (which allow you to easily recompile and experiment frequently to find

bugs), and the c-systems package (which is slower at compiling but helps you find a bug usually after one compilation). Take into account your personal debugging style in evaluating the desirability of such a tool. Note that the c-systems compiler does not support the full language—floating point support and the cast operator are its most notable omissions.

Which of these three C compilers do I prefer? As much as I like the source level debugger provided by c-systems, I prefer a compiler that runs quickly. Choosing between Lattice C and CI-C86 is more difficult. For me, the standard object files, the extra polish, and the speed of Lattice C make it a more desirable compiler. /PC

IBM PERSONAL COMPUTER HANDBOOK

EDITED BY DZINTAR E. DRAVNIKIS, et al
Authored by nine professionals. \$19.95. 448 pages;
7 1/4" x 9 1/4" illustrated, directory, index, appendices
PUBLISHED BY AND/OR PRESS, INC

The IBM PERSONAL COMPUTER HANDBOOK is written for people who want to use a personal computer, not become programmers. The vast variety of hardware and software now on the market means that the intelligent solutions to your problems are already waiting for you.

ARE YOU... NEW TO COMPUTERS?

In plain English this indispensable Handbook explains personal computer concepts, functions, and uses. A glossary at the start of each chapter lets you learn the terms as you read.

SHOPPING FOR A SYSTEM?

The IBM PERSONAL COMPUTER HANDBOOK gives you a complete overview of the PC and its various configurations (including the new XT) and helps you find the right hardware and software for your needs. The comprehensive Directory lists vendors, hardware, software, accessories, publications and support groups.

A PC OWNER?

You have individual needs and special considerations that make your application unique. This Handbook will save you time and money — you can get the right system the first time and not experiment with your business. You'll also discover a complete range of other applications and an expanding world of possibilities.

TO ORDER: Send \$19.95 (plus \$2.00 postage & handling) to NETWORK, INC., P.O. BOX 2246, BERKELEY, CA 94702. Sorry, no C.O.D. orders. Prepayment in U.S. funds only must accompany all orders. If paying by check or money order, make payable to "NETWORK, INC." Please allow 4-6 weeks for delivery. If you would prefer First Class Postal delivery, please add an additional \$1.00.

Software and Tupperware®

These days, most everyone stores their leftovers until they can think of something to do with them. Now, Micro Cookbook does the thinking for you. Tell Micro Cookbook what's in your refrigerator and it'll tell you what you can make. Micro Cookbook includes hundreds of delicious recipes using common leftovers and ingredients most every home always has on hand. Micro Cookbook stretches your food budget by helping you stretch your food.

Micro Cookbook also lets you select a recipe by name (Veal Picatta), by ingredient (veal), by classification (Italian) or a combination of the above. Plus, Micro Cookbook allows you to enter your own recipes, create your own cookbook and prepare your shopping list. Add a glossary of cooking terms, calorie and nutrition guide, table of measurements, ingredient substitutions and food buying, storage and cooking guide, and you see why Micro Cookbook is an appetizing program for you.

VIRTUAL COMBINATICS

The Selling (And Buying) Of The PC

Value given for value received.
—John Galt and others in *Atlas Shrugged* by Ayn Rand

Tanstaafl!
—Popular loonie expression for "There ain't no such thing as a free lunch!"
from *The Moon is a Harsh Mistress* by Robert Heinlein

Caveat emptor.
Latin proverb (literally "buyer beware")

A funny thing happened the other day when I called my friend Rich.

"Hey, Rich, I was over at Computer-Land and . . ."

"I hate retailers!!"

I managed to calm him down. His knee-jerk reaction was a little extreme, but not without some justification—and it certainly wasn't an isolated response. Consider, if you will, these true stories.

A new model PC is ordered with 256K RAM installed on the system board. It arrives with 64K. Three weeks later, after some begging and a number of broken promises, the additional three banks of chips arrive. They are 16K chips, not the required 64K chips. They have been shipped in a padded mailer; many pins are severely bent.

Three PCs (an XT, PC, and PC with expansion chassis) are ordered. The purchase order specifies complete installation of all components. The XT arrives promptly and is properly set up. The two PCs arrive much later, in pieces. Neither machine operates when assembled. One has a bad keyboard, and the other seems to run but will not operate a display.

CIRCLE 234 ON READER SERVICE CARD

A PC is purchased from an independent computer store, an authorized IBM dealer. The buyer is sold non-IBM disk drives. Only one place in town will service that system: the same place that sold it.

A buyer of a PC purchases DOS 2.0 from an independent computer store, an authorized IBM dealer. Cost: \$80. IBM list price: \$60. The dealer claims it is the only store that sells the new DOS. At least two other dealers are discovered to have healthy inventories; both sell at the list price.

A specific manufacturer's multi-function board is ordered. The retailer tries to sell a different board in its place, even though the two products are not at all equivalent.

A Diablo printer is ordered with a Diablo tractor feed. The printer is delivered with a Rutishauser tractor feed. The Rutishauser is better, but once installed it prevents the printer cover from closing and engaging the cover switch. The printer does not work until something is used to jam the switch. The Diablo was ordered in the first place because a different cover is installed on models with the tractor.

Why should all these things happen? Why are they so common? Can anything be done about it? And if so, by whom?

Well, these things are going to continue to happen and will probably become more and more common. Something can be done about it. By you. Let's cover the problems one by one.

Value given . . .

The purchase of a computer system represents a trade of goods for cash, supposedly of equivalent value. It does not matter that IBM can build the basic PC system unit for about \$300 or that you know it. As a consumer, you know how our retail system works, and you know that they have to pay for each stage.

A product is built, and the manufacturer pays his suppliers for the cost of the raw materials. The product is then sold at a price that covers materials, labor, and

fixed overhead, while at the same time generating a profit. The product then enters the distribution channels, incurring transportation costs and another profit for the distributor. In the case of the PC, IBM is the primary distributor, selling directly to its other divisions, its own retail operation, and other retailers. Even though IBM handles distribution internally, the process still adds cost.

At some point the retailer gets the product. Because this is the end of the distribution chain and the point of customer contact, the retailer must provide certain services to support the marketing, pre-sale, sale, and post-sale phases of getting the product into the hands of the ultimate consumer. The retailer desires very much to be paid for this service, and we have for centuries agreed that such an arrangement is fair.

So far, so good. So what happens?

Tanstaaf!

Darn right. You don't get what you don't pay for, no matter what you may think or what your retailer tries to make you think.

Here's the main point we all have to face: the IBM PC, or any other computer system, is a complex product involving a lot of detail and an infinite variety of styles, colors, and sizes. At your clothing store, you'll get, "Something in a fuchsia plaid?" But of course, right this way." In a computer store you'll get, "Take the

output from GoloticCalc, put it through Dato/Universe, and print mailing labels with CometList? Um, I'm not sure, let me ask . . . "Worse, these responses are usually given in code, as in, "Sure you can, no problem!" accompanied by an utterly con-

THE 8087 HAS ARRIVED!

Next to the 8088 in your PC you will notice an empty 40 pin socket. You may have wondered what IBM planned for it. We had an idea... Intel's 80 bit NUMERIC DATA PROCESSOR... the 8087! This coprocessor crunches numbers 100 to 1000 times faster than the 8088!

We were right, but there is a hitch. Once you've installed the 8087, you must have the software to drive it. Here is where MicroWare enters the picture. We provide that software. Our FASTPAK™ includes the 8087NDP, installation instructions, our 87/88GUIDE™ and your choice of one language module.

FASTPAK™ users are happily reporting speedup of their compiled programs by factors of up to 30. Installing an 8087 in your PC can make a significant improvement in number crunching, real time animation, or just printing numbers to the screen. 87FORTRAN/RTOS™ is now available. For details, see our other ad in this issue.

8087 Support from MicroWare

FASTPAK™+8087™

This package includes a copy of our 87/88GUIDE™, a MicroWare-tested 8087 with installation instructions and one of the following powerful modules: 87BASIC™, 87PASCAL™, 87MACRO™, or 87FORTRAN™. ...\$375

87/88 GUIDE™

A handbook on 8087/8088 programming using 87MACRO™, and the IBM Macro/Assembler or the CPM88 Assembler. Contains numerous examples of programs that run on the PC along with valuable appendices that will aid you in writing assembly language programs. ...\$30

8087 CHIP

...\$223

MicroWare not only provides quality products but the support to make them work! Our users receive a monthly newsletter, two free software updates, and a HOT LINE to

87 MACRO™

Our complete 8087 software development package. It includes an 8087 "Preprocessor" which converts 8087 opcodes and operands into 8088 escape codes. Also contains the source code for a library of 8087 macros, and an object module which performs 8087 extensions including transcendental trigonometrics, hyperbolic functions, and number conversions. ...\$150

87 FORTRAN/ RTOS™

MicroWare's 8087 optimizing compiler utilizes overlays, arrays up to 64K, memory management and more. (Details in PC and PC Technical Journal) ...\$1350

call for 8087 related advice. MicroWare is your complete CLEARING HOUSE for 8087 related products. We sell the compilers and programs you need at affordable prices.

It is not surprising that many of the findings from these studies are concerning the effects of alcohol and four-year-old children. Data from the 1990s (Lambert, 1990) and the 1990s (Lambert, 1990) show that children who are in the fourth grade are more likely to be involved in accidents and are more likely to be involved in accidents than children who are in the third grade. This is likely due to the fact that children who are in the fourth grade are more likely to be involved in accidents and are more likely to be involved in accidents than children who are in the third grade.

viocine smile.

To provide solid answers to what seem like simple questions, but that usually involve complex issues, the retailer needs people with experience and intelligence. This costs money, and lots of it, more money than the average retailer can afford. The buyer can get it, if he or she can pay for it. However, I think the average buyer will be reluctant to pay \$6,000 for a \$5,000 computer just to know that the person with all the answers works at the store.

Okey. Let's say you agree that you have to pay a fair price and that the retailer is between a rock and a hard place cashwise. How do you avoid getting crushed too?

Caveat Emptor

Work. Study. Learn. Understand. It's the only way.

Being wary of the retailer will only work as a strategy if you know what you are talking about. When I opened my box to find 16K chips, I knew what they were. If I hadn't, they would have been plugged in and the system would have failed. This is a pretty small detail, and once a buyer shouldn't have to worry about, but knowing it saved me time.

The case of the chips is a good one for a number of reasons. My purchase order clearly indicated what was desired: the newest model of PC with 256K capacity on the system board, 256K installed. I didn't get them installed and I didn't get the right components. But I'm on solid ground here, because I knew how and what to order in the first place; that order was not open to interpretation. Fighting the installation is, unfortunately, a waste of time because I need the machine more than I need the hassle. The machine is so good to the office without the memory, though, so I raised a stereotypical fuss and let everyone know about it.

The key here is that I knew in advance what I needed, what I wanted, and how it all went together. That's exactly what I ordered, in detail. When I didn't get what I ordered, I knew it and took action to correct the situation, using the initial order as my primary weapon.

Any buyer can do this, with the proper amount of time and study, and in advance. Put the retailer on the spot, ask tough questions, demand answers, and work to get what you want. Although the relationship may seem to be an adversary one, the process can be civil and courteous. It's

simply up to you to make sure you get what you pay for.

But is it fair?

Consider it a different way. Toys "R" Us is now selling computers, and judging by the way the store displays are growing in size and sophistication, and by the number of different models sold, I'm convinced that it is selling plenty of them. How much support can you expect from a toy store? The answer is, very little, and this isn't unreasonable. In fact, it is exactly the same answer you would get if you asked what kind of support the store gave on a Mattel electronic toy. The toy store might replace a defective unit with a working one, but unless luck is on your side, the store personnel will probably not be able to tell you how to play the game. They are also not going to be able to tell you how to work your far more complex computer system.

The retail complexity of the PC is far greater because the hardware and software systems available for it, and the applications to which it will be put, are themselves far more complex. The retailer is certainly in a different category than a toy salesperson, but we are talking about overwhelming complexity. In many cases, the retailer probably can't even answer basic questions about everything in the store's product line, much less questions about recently announced products or that special whizbang you absolutely must have.

IBM seems to be attacking this problem with its Customer Support System (CSS), a program that can give automated demonstrations of IBM software and provide some information about hardware and software products. At the moment, the CSS database is very skimpy, and completing it will be a formidable task. What retailers should have is a system that would allow them to dump two warm salespersons and replace them with a single, more highly-paid human expert. Don't hold your breath.

It is wrong to give the impression that all retailers share these traits and problems. Some stores are staffed with very helpful and well-informed personnel. Regardless of how good the store is, you can improve the situation by educating yourself as much as possible before you decide to buy.

And remember, you really do get what you pay for. /PC

Now, You Don't Have To Worry About Spelling.

Wordworking Tools gives you a complete spelling system and other user-friendly word processing features for only \$39.95!!

A COMPLETE SPELLING SYSTEM:

Fast dictionary checking.
View errors in context.
Search the dictionary with as little as 1 letter.
Substitute correction.
Create user dictionaries.
ALL FROM ONE PROGRAM!!

USER FRIENDLY:

Menu guide you through all functions.

14 MORE TOOLS INCLUDED:

- Find and replace words and letters.
- Automatic abbreviation expansion.
- Word count and frequency of use.
- Sort words or numbers.
- Tab reformatting.
- Wordstar to ASCII conversion.
- ... and more!

PROFESSIONAL MANUAL:

3-ring binder.
Full description and examples.
All error messages listed.

FLEXIBLE:

Use with Wordstar and most other text editor/formatters.

SYSTEM REQUIREMENTS:

PC-DOS.
128K of memory.
320K of disk storage.

FABS

AUTOSORT

fast B-tree keyed access sub-system

high speed Sort/Merge/Select sub-system

- Rapid access and maintenance of large files with fixed-length records
- Versions available for CP/M-80, MP/M-II, CP/M-86, MS-DOS, PC-DOS, Microsoft BASIC(s), COBOL, FORTRAN, PASCAL, PL/I, CBASIC, CB80, CBASIC86
- FABS directs all Access, Insert, and Delete file operations
- Key length may be greater than 50 bytes, and six key files open simultaneously
- Multiple primary key and multi-level key plus duplicate and variable-length keys are supported
- Random search time approximately 1 second, sequential step 1/4 sec.
- Deleted records are automatically reclaimed by subsequent insert operations
- Key files never need to be re-sorted: excellent error handling
- Generic search returns the first occurrence of partial key; search-next provides sequential read
- Loads resident with DOS, occupying less than 15k bytes
- Easy to incorporate into existing file-intensive applications
- Extensive commands: Create, Open, Close key file, Search (first, last, next, previous, generic), Insert, Delete, Replace key, Max Length, Open Deletes, # of Records, # of Keys

- Optimized for very large files; stand-alone or callable subroutine; diskettes may be changed during operation
- Versions available for CP/M-80, MP/M-II, CP/M-86 and MS-DOS, PC-DOS running Microsoft BASIC(s), COBOL, FORTRAN, PASCAL, CBASIC, CB80, CBASIC86
- Record size may exceed 5000 bytes, and file length is unlimited
- Sorts based on up to 10 fixed or variable length keys, each ascending/descending
- Key fields may be string, integer, single or double precision numeric
- Output files may consist of full records, key with record pointer, and record pointer only
- Select for retain/delete based on up to 4 keys, AND, OR, >, <, =, conditions
- Single or multi-user; sorted files may be merged
- Fast ... 4000 records of 128 bytes sorted to give key and pointer file in 170 seconds
- Boot traps itself into and out of memory claiming/restoring memory automatically
- Up to 9 different Sort/Merge/Select Modes of operation; parameters defined at run-time or read from a file
- Interactive parameter set-up program is supplied; files may be on disk drives A-Z

HOSTCOMM

by JANADON

\$170.00

The Complete Host Communications System

★Features:

- The first Host communications system for the IBM Personal Computer
- Run programs from a remote site with a terminal or another computer
- Use as a personal communications system or electronic mailbox
- Full Upload/Download facility for ASCII files

- Easy set-up, installation, and especially easy to use
- Full system operator support
- Three level password protection
- Unattended operation

ADD-ON FEATURES for HOSTCOMM

- PCE-MAIL** — designed to allow Hostcomm users to leave messages and correspondence for other users. Passwords permit privacy, "wildcard" addresses permit generalized mail. Help files provided. **\$80.00**
- CONFERENCING** — make your Host the most popular system in town. Choose up to 12 different topics for your users. One menu can be used to control both PCE-MAIL and CONFERENCING. **\$80.00**
- HOST UTILITIES I** — a series of 4 utilities for use with HOSTCOMM. MENU-MOD simplifies menu management. Other options compute file sizes and transmit times, list menus and filespecs. **\$49.95**
- HOST UTILITIES II** — HOSTMENU permits alteration of a Download Menu, or changes to a higher number menu. HOSTFILE uses a password scheme so that only certain callers may download files. **\$49.95**
- ORDER TRANS** — a program used with HOSTCOMM to provide callers with information about your products. Product descriptions are contained in a separate file for easy modification. Pertinent order information may be requested and stored from callers. **\$39.95**

★Minimum Systems Requirements:

- 128KB System Unit
- 320KB Diskette storage (1 or 2 drives)
- PC-DOS 1.0 or 1.1
- Printer
- Asynchronous Communications Adapter
- Hayes Stack™ Smartmodem 300 or 1200
- Video Display (40 or 80 characters)

I WAS surprised at the brilliant colors on the composite monitor—the high-resolution graphics mode is only supposed to be in black and white.

entered the following numbers: 00 BA 79 24 B7 07 B8 00 C6 CD 10 BA 00 00 B7 00 B4 02 CD 10 C3. When you've finished, press Return.

5. At the prompt, type W.

6. When the prompt reappears, type

Q.

You are now ready to test the program. Type CLS. The screen should clear and the PC-DOS prompt appear in the upper left hand corner. If it doesn't work, delete CLS.COM from your directory and repeat the process, taking care to enter the numbers correctly.

Gerald Green
Fort Worth, Texas

Hi-Res Color Trick

When I first saw a demonstration of Microsoft's Flight Simulator I was surprised at the brilliant colors on the composite monitor—the high-resolution graphics mode that this program uses is only supposed to be in black and white. I was further mystified by the absence of color when the same program was run on an RGB monitor. After some investigation, I found that Microsoft had simply exploited a quirk of the color/graphics adapter board.

The 14.31818 MHz pixel rate in high-resolution graphics mode is four times the

3.58 MHz color carrier frequency used in a composite video signal. Colors are produced by the phase of this signal relative to that of the video signal. With a base pixel rate four times higher than the color carrier, 16 different color modulation patterns can be produced. The color/graphics adapter has a software-controlled "B/W"

THIS TECHNIQUE does permit the intermixing of 80-column alphanumerics and color graphics.

signal that is normally used to eliminate color modulation in high-res mode.

The BASIC program in Figure 2 shows how you can generate colors in high-res

Drawing Ahead of the Rest.

Frieze™ \$55

Lightning fast graphics screen print—faster than any other such program we've tested. Prints graphics screens to the Epson printers with Graftrax™, the IDS printers (except 440) with graphics option, the NEC family, and the Okidata family. Prints in 7 brilliant colors to the IDS Prism™ printer with color option. Frieze runs "beneath" any application running under DOS.

Glyphix™ \$24.95

The only graphics scratchpad program that comes with its own ramdisk! Draw directly to the screen and save your screen to disk in a flash with Z-Drive. Glyphix gives you 31 commands for drawing, including shape table generation, text placement (anywhere!) full color control, shape "drag & paste", easy circles/ellipses/arcs, much more. Requires BASICA, 64K. Fully listable and commented. No secrets!

Also for the Z100/H100!

Innovative Software for CP/M™, CP/M-86™, and PC/MS-DOS™.

Introducing RAM+3,

Seattle-Computer's ultimate IBM-PC and XT

When we put ink to paper to design RAM+3™ the super multifunction board, it was with a goal in mind. Build the best. A new standard. With all the most wanted features built right in for the most demanding user.

And frankly, we've succeeded.

RAM+3 has all the functions, memory and software needed to truly enhance your IBM-PC®. With this in mind, each RAM+3 board includes: **Lithium-powered Clock/Calendar.** Precision-set at our factory, this internal clock instantly comes up with the proper date and time and runs continuously whether your PC is turned on or not. What's more, because we originally wrote PC-DOS, our inside knowledge has helped us make our clock truly integrated into the IBM-PC's operating system. **Exclusive Flash Disk™ software.** Our innovative software electronically simulates a floppy disk

drive—allowing you to use up to 640K of RAM as a high-speed disk. What that means is you can load your frequently used disk files to Flash Disk and run programs many times faster than with a mechanical disk.

Because of our intimate knowledge of the PC operating system, we know how to do Flash Disk right. All without tricks or emulation mismatch problems. And our new Flash Disk version for DOS 2.0 is even more flexible than the original.

Four memory options. Depending on your needs, RAM+3 is available in 64K, 128K, 192K or 256K. And all boards are fully socketed for easy memory upgrades.

Built-in RS-232 serial port. The serial port can be configured as IBM COM1 or COM2, and is fully compatible with IBM's Asynchronous Communications Adapter.

Programming tips and insights into bugs are shared by members of the PC users community.

User-To-User

This month we have a number of helpful hints and nifty fixes to make you and your PC happier. A solution that makes random numbers more random, a BASIC program that creates a .COM program in machine language, and a neat dBase II fix.

Going to Seed

The random number generator in BASIC, invoked by the RND command, always starts with the same seed number. The next number that RND produces, while apparently random and bearing no relationship to the first number, will be the same every time you use RND. And so

forth.

An application program I was writing required a truly random number so that the machine's action could not be predicted nor the program be manipulated. I tried using RANDOMIZE(n), providing a new seed number from the value of (n). The first time I ran it, everything looked OK—the number series that RND generated was new. The second time I tried it, though, it repeated the new sequence once again.

What I needed was a way to put a truly random number into the RANDOMIZE statement so that the RND command would be reseeded every time the program was run. My solution was to use a counting

loop that is interrupted by the user's response to an on-screen question. The number in the counter (A) at the moment a key is pressed becomes the new seed for the random number generator. The listing in Figure 1 gives an example of how to implement this capability in your programs.

Paul Burck
Lakeville, Minnesota

I REQUIRED
*a truly random number
so that the machine's
action could not be
predicted.*

This is a decent way to get BASIC to produce a random number. The only change I might make in the listing is to add an additional test in the loop body:

```
IF A = 32000 THEN A = -32000.
```

This would allow the loop to run "forever" if the user were slow to respond.

CLS-sy Idea

Have you ever wished that BASIC's CLS command worked while you were in PC-DOS 1.1? Lots of people must have, because screen clearing now is a feature in

Figure 1: A program, written in BASIC by Paul Burck, that generates true random numbers.

```
10 WIDTH 80 : CLS
20 A = 0 : X = 0 'initialize variables
30 LOCATE 7,30 : PRINT "WELCOME TO EXAMPLE!"
40 LOCATE 9,17 : PRINT "(Here begins a screen display of
   instructions.)"
50 LOCATE 11,14 : PRINT "Three or more lines allows enough
   time to elapse for"
60 LOCATE 13,15 : PRINT "variation in RND generated with each
   program run.)"
70 LOCATE 19,23 : PRINT "Press space bar to continue. . .";
80 FOR A = -32000 TO 32000 'start timer loop
90 T$ = INKEY$ : IF LEN(T$) = 0 THEN NEXT A
100 CLS : LOCATE 10,25 : PRINT "HOW MANY PEOPLE ARE PLAYING ";
110 INPUT N
120 RANDOMIZE(A)
130 X = INT((RND)*N)+1
140 LOCATE 16,35 : PRINT "RND = ";X
```

PC-DOS 2.0. Here is a machine-language answer to your prayers. It is created using DEBUG. Don't be scared if you haven't used this utility before. Just follow the instructions below and you'll have the program running in no time.

1. Load DEBUG. When DEBUG loads, it will prompt you with a dash.

2. Type N CLS.COM.
3. When the prompt reappears, type RCX. DEBUG will respond, CX 0000 :
- Type 17.
4. At the next prompt type E100. You will see:

04B5:0100 xx.

(xx will be some hex number.) Don't be concerned if the first four digits, the memory segment, are different: this value is based on the amount of memory in your system.

Now type B9 and press the space bar.

HAVE YOU
ever wished that
BASIC's CLS command
worked while you were
in PC-DOS 1.1?

Two more hex digits will appear. When they do, type 00. Press the space bar and two more digits will appear.

Continue this procedure until you have

the new standard.

multifunction board.

Parallel printer port. Utilize your parallel printer with this built-in hook-up which eliminates the need and expense of a separate port.

All of these features would mean very little if it weren't for the fact that RAM+3 is made by Seattle Computer. We're a company with an outstanding reputation for quality and reliability. Our quality comes from our intimate knowledge of PC-DOS. We know the IBM-PC from the inside out. And since 1977, we've been leading the way in the creation of reliable memory and multifunction boards. Over 40,000 in all.

And now we're proud to introduce RAM+3, the multifunction board which will become the new standard for the IBM-PC.

For more information and the location of the nearest RAM+3 dealer call toll free 1-800-426-8936.

mode. Line 20 disables the "B/W" signal by setting the MODE register to 1A hex instead of the normal 1E. The binary numbers in lines 40 and 50 define the left-to-right line positions, then the FOR-NEXT loop draws a 16-bar color chart on a composite monitor.

This technique is of limited practical value, but it does permit the intermixing of 80-column alphanumerics and color graphics. Characters will be arbitrarily or randomly colored. Small objects will not

be colored properly (as evidenced already by the characters), but large areas, such as those found in the Flight Simulator's display, are beautifully rendered. In fact, this technique produces more varied and more brilliant colors in large areas than may be had conventionally.

David F. McManigal
Stormville, New York

dBrightness in dBase

Data being edited by dBase II is dis-

played in reverse video. Many people find the brightness of reverse video to be hard on their eyes and use the SET INTENSITY OFF command to eliminate it. Then they find that the colons bracketing the fields

I CAUTION
readers against using
undocumented features
in software. There is no
guarantee that they will
be there in the next
release.

don't offer enough guidance for their eyes, making the screen hard to read.

There is an undocumented POKE instruction in dBase II that allows you to modify memory from within your dBase programs. The byte that specifies the way your monitor displays highlighted information is at 0417 hex or 1047 decimal. You can set this byte to values other than the one that dBase II uses to initialize your PC. The program in Figure 3 uses POKE to demonstrate the alternate display possibilities.

Rick Bernauer
Independence, Missouri

I ran this program on a number of machines and found that all the IBM compatibles handled the POKE correctly. Some of the modes looked a little strange on the color monitor, but the net effect is there. I would be remiss in not cautioning readers against using undocumented features in software. There is no guarantee that they will be there in the next release. In the meantime, your eyes should appreciate this byte of extra control.

Now! For
VISICALC Advanced
Version, too.

Learn the VISICALC* Program in 58 minutes. On VIDEO TAPE!

Micro Learning Concepts New— LEARNING CONCEPT: THE VISICALC PROGRAM

Now, learn VisiCalc in only 58 minutes. In the comfort and privacy of your home or office. At your own pace. At your convenience. At the time you choose. Because of a revolutionary new concept—personalized learning on video tape. It's that easy!

Using the case-study method, you'll work along with the video tape. You'll learn the VisiCalc Program (on the IBM PC) step-by-step—by doing it. It's so easy, it's actually fun! The video tapes are designed to fit all popular video tape recorders.

LEARNING CONCEPT: THE VISICALC PROGRAM

- The video tape is broadcast quality and professionally produced to meet the highest industry standards.
- The tape first introduces you to the VisiCalc Program and the IBM PC.
- You'll learn to use all important commands and features.
- You'll learn how to put the VisiCalc Program to use for your own unique requirements, whether they're financial, management, research or record keeping.

LEARNING CONCEPT: THE VISICALC PROGRAM also includes a Quick Reference Guide that contains easy-to-read reference charts, and summaries of every VisiCalc command.

Whether you're a corporate manager, financial analyst, chairman of the board, or just keeping the family budget, LEARNING CONCEPT: THE VISICALC PROGRAM makes the VisiCalc Program a breeze to learn.

MLC—the leader in video tape training for personal computers. Look for our complete line of LEARNING CONCEPT training products at your local store or order direct.

DEALER INQUIRIES INVITED

PC MAGAZINE 552 JULY 1983

\$95 GRAPHICS For Your IBM MONOCHROME DISPLAY

The ABM "COLMON" put graphics on your IBM monochrome screen for less than a hundred dollars.

COLMON is an electronic interface module that plugs between the RGB connector of your IBM Color/Graphics adapter and your IBM Monochrome Display. **COLMON** transforms the IBM Color/Graphics adapter output signals to make them compatible with the IBM monochrome display. So there is no need to buy the IBM Monochrome/Printer adapter anymore. (If you miss the printer port, check out our OMNIBOARD™. **COLMON** doesn't take up any expansion slots and installs in less than five minutes with no special tools or knowledge required. **COLMON** works with any software that uses the IBM Color/Graphics adapter. It even works with Colorplus Adapter by Fredericks Electronics and others.

COLMON is field proven with several thousand users including many Fortune 500 customers. Spread sheet programs like **CONTEXT MBA** (see photo), **Lotus 1-2-3** and the **Visi-series** will present both graphs and text at the same time on your IBM monochrome display. **ABM Personality Series** products put graphics within your reach. **ABM** quality and prices will put a smile on your face. So before you spend hundreds of dollars for an RGB monitor, check out the **ABM** solution at your local IBM Personal Computer dealer. Ask him to give you a demonstration of the **COLMON** graphics. You'll be glad you did. Or call **ABM** for a catalog describing the full line of enhancement products for the IBM PC and the dealer nearest you. Other **ABM Personality Series** products include multifunction boards, 3270 intelligent emulators, software products and more.

THE SINGLE SOURCE FOR ALL YOUR IBM PC NEEDS.

HARDWARE

DataLynx

A hard- and software package permitting mainframe-to-PC communications via dedicated or dialed RS-232-C ports.

The DataLynx protocol converter unit offers a choice of dedicated or dial-up modes for remote use. In dial-up mode, the DataLynx protocol converter allows the user to support up to nine PCs simultaneously on one bisync port without modems.

Included software allows 300, 1200, 2400, 4800 or 9600 bit per second operation, and downloads an interrupt-driven assembly language program that permits 3278 emulation. (List Price: DataLynx/3270

\$1,450; DataLynx/3274 \$4,000 to \$6000 depending on number of needed channels; software \$60 for first program, \$30 each additional)

FutureNet DASH-1

A hardware/software package that automates printed circuit end schematic design of systems composed of ICs and discrete electronic components. The FutureNet DASH-1 (Design Aid Schematic Help-mate) Schematic Designer adds software, a proprietary graphics controller, a mouse, additional memory, and an optional printer-plotter to the user's system.

The user can create, update, and print schematic diagrams of electronic systems. Components can be called up from memory, moved, interconnected or deleted from the circuit being designed, and the circuit modified or replicated automatically. If desired, the DASH-1 can compress the contents of a D-size schematic into a more easily handled 11"x17" drawing that can be produced by the system's printer. All schematic data for drawing sizes A through E is captured on the user's floppy disk. Page Pin Lists are created automatically, and with optional DASH-1 software, this data can be used to generate part lists, lists of materials, and design check reports. (List Price: \$5,980 without optional printer-plotter)

Caere Series 500 OCR

An optical character recognition (OCR) system incorporating an interface board that can be inserted into one of the user's system accessory slots. The OCR allows the user to enter data directly from printed material at scanning speeds varying from 5 to 20 inches per second, with rejection rates of less than one percent and substitution errors of less than .01 percent. Strings of up to 80 characters can be read in a single pass.

The unit includes an attachable hand wand reader. (List Price: \$1,145)

Series 77000 AC Voltage Regulator

A device that protects electronic equipment against voltage fluctuations. The regulator can accept voltage at 27 percent below nominal and corrects it to within 7 percent of nominal in less than one cycle of line frequency. Protection is afforded against sudden short-term voltage sags as well as longer-term power fluctuations such as brown-outs. The unit has 98 percent power efficiency. Operating within a frequency range of 47Hz to 63Hz, the regulator is available in power ratings from 1 kVA to 100 kVA. (List Price: \$750 and up) Powermark 3855 Ruffin Rd. DT2805 Analog/Digital I/O Board

A plug-in data acquisition board featuring low-level software-selectable gains of 1, 10, 100, and 500. The DT2805 contains an on-board microprocessor, which acts as interface, controls all analog and digital I/O operations, and performs self-test functions.

The multifunction architecture of the board combines analog/digital, digital/analog, and digital I/O functions with several operating modes, including Direct Memory Access and Programmed I/O data transfers. The DT2805 also has an on-board programmable clock, which may be used to control the timing of operations. Time intervals can be set in 2.5 microsec. increments.

An optional software package provides easy data collection via BASIC, including linearization. (List Price: \$1,295) Data Translation, Inc. 100 Locke Dr. Marlboro, MA 01752 (617) 461-3700

CIRCLE 689 ON READER SERVICE CARD

CTC Quick Disc

A memory storage device that emulates an additional disk drive. The unit may be configured, through accompanying software, for use as either a permanent storage file or a cache buffer for existing Winchester or floppy disk drives. In the cache mode, frequently referenced files on disk can be retained in the unit's buffers, giving rapid access for each reference after the first.

Capacity ranges from 128K to 4M bytes. The unit features a separate 110V power supply, battery backup, double-

bit error detection, single-bit error correction, and scrubbing. A supplied interface board attaches the unit through the PC bus to any of the device adapter slots in the PC. (List Price: \$1,130-\$4,705, depending on memory capacity)

PC-MATE IEEE488, Tecmar, Inc.

IBM Expansion Unit; Model 1/IBM Color Display

Expansion unit offers a 10 megabyte fixed disk that can be used for program development, document storage, and applications that require large on-line files. It includes additional feature slots.

The high-resolution IBM Color Display lets you use up to 16 foreground and 8 background colors to highlight business information in numerical tables and text, or to produce graphics displays. (List Price: IBM Expansion Unit Model 1, \$3,390; IBM Color Display, \$680)

Requires: Expansion Unit: 128K, one disk drive, DOS 2.0. Color Display: Color/graphics adapter card. IBM Corp., 400 Pearson's Pond Dr., Dept. 7AG/530, Franklin Lakes, NJ 07417

CIRCLE 605 ON READER SERVICE CARD

PC-MATE IEEE488

An interface circuit board including both the Intel 8291A and the 8292 integrated circuit set. The board provides talker, listener, and controller capabilities on any size IEEE488 system, including those linked to other computers. The board allows data transfers using either programmed I/O or direct memory access and provides a variety of user selectable interrupts. Its data transfer rate is programmable, and it provides complete source or acceptor handshaking plus talker and listener functions. Handshaking is handled automatically using the standard IEEE488 bus protocol.

Optional PC-DOS compatible software permits both direct memory access and interrupt lines to be software-disconnected, allowing multiple devices to share the same lines. A software interface from BASIC and other high-level languages is included in the software support package, giving users the option of compiling for faster execution. (List Price: \$395; software support package, \$95)

Requires: 64K, one or two disk drives, MS-DOS 2.0, BASIC or FORTRAN. Tecmar, Inc., 23600 Mercantile Rd., Cleveland, OH 44122 (216) 464-7410 Telex: 241735

CIRCLE 600 ON READER SERVICE CARD

PC-MATE Lab Master

A combination add-in/add-on peripheral designed for measurement and control applications. It provides 16 channels of high-resolution analog-to-digital conversion, two channels of 12-bit digital-to-analog conversion, five independent 16-bit counter/timers, and three 8-bit parallel ports. Lab Master is capable of memory-mapped operation at any specified I/O or memory address, and the board can be strapped for either 16 single-ended or eight true-differential inputs.

Lab Master comes in two pieces connected by ribbon

cable. An add-in circuit board, occupying one of the PC's expansion slots, accomplishes the necessary interface with the host computer and contains the D/A, parallel ports, and timer circuits. An outboard package includes the analog-to-digital conversion circuits. This configuration minimizes noise on the signal being digitized. (List Price: \$995)

Tecmar, Inc., 23600 Mercantile Rd., Cleveland, OH 44122 (216) 464-7410 Telex: 241735

CIRCLE 601 ON READER SERVICE CARD

PC-MATE Lab Master, Tecmar, Inc.

PC-MATE Speech Master

Hardware and software that provide synthetic voice output, text-to-speech conversion, and expanded native vocabulary. The Speech Master board produces two forms of speech synthesis: high-quality speech with a limited ROM-based vocabulary, and unlimited vocabulary phoneme synthesis.

Speech Master's software support operates under PC-DOS 1.1 and offers two utility programs. ENGLISH provides a software base for text-to-speech conversion, while SPEAK sends screen output to the speech synthesizer for simultaneous spoken output.

The Speech Master Auxiliary Vocabulary Unit extends the native (canned) vocabulary of the synthesis mode. (List Price: Speech Master board \$395; Speech Master software support package \$95; Speech Master Auxiliary Vocabulary Unit \$100)

Requires: 64K, one disk, MS-DOS 2.0, BASIC amplifier, Tecmar, Inc.

Touch Information Display (TID)

A standard ASCII terminal with touch-sensitive display, allowing user to interact with programs by touching proper points on the screen. The TID relies upon arrays of light-emitting diodes and photo-transistor detectors around the periphery of the screen. Outputs result when criss-crossing beams of infrared light are interrupted.

The 12-inch diagonal, amber-phosphor screen displays 24 lines of 80 columns each. Touch areas, however, can be of any shape or size and are set up using a menu-driven routine stored in ROM. Up to 646 active touch areas can be defined. TID output resulting from a touch can be either in X-Y coordinates or one of 98 ASCII codes associated by software with a particular touch area. The unit is linked to the host computer by an RS-232-C interface at rates of up to 19,200 baud. (List Price: \$1,400)

TD-1012/PC-STR

A half-inch magnetic tape subsystem featuring a start/stop mode at 12.5 inches-per-second (ips) and a streaming tape mode at 100 ips. The tape transport is available in three mounting configurations.

The recording mode is standard phase encoded at 1600 bits-per-inch. Data transfer rates are 20K bytes per second (bps) in the start/stop mode and 160K bps in the streaming mode. The unit will accept industry-standard reels from 7- to 10 1/2-inches in diameter and stores approximately 40 megabytes of formatted data (depending on block size) on a 2,400-foot reel of tape. Included with the unit is a tape controller insertable in a vacant slot, and interconnect cables and manuals.

The TD-1012 also includes a 5 1/4-inch disk containing driver software for use with BASIC. Within the operating system, the user has access to 20 commands, including EBCDIC conversion. The drives will return data on 15 status conditions, allowing read/write/control for the tape system. DMA data transfer is utilized. A manual included with the package describes the tape controller installation and use of the software under BASIC. (List Price: \$4,995)

Personal Bibliographic System

A program that allows users to compile, format, and arrange bibliographies. The Personal Bibliographic System is a specialized word processor and database that features a screen editor, variable length fields and records, allows notes and annotations, and allows alphabetic or user-defined arrangement of citations. Punctuation of citations is according to the American National Standard of Bibliographic Citations (ANSI Z39.29.1977) and the International Standard Organization (ISO). A demonstration program allowing up to 10 citations is available with the user manual. (List Price: \$250; manual and demonstration disk only, \$75)

Requires: 64K, two disk drives, 80 character display, printer.

Personal Bibliographic Software, Inc.

GAS-PRO

A bookkeeping system developed specifically for service stations. GAS-PRO allows shift-by-shift checkout of the day's sales (gas and repairs), accumulating to a one-page sales summary with statistical analysis of gas sales.

The program maintains Accounts Receivable and prints customers' statements automatically, and tracks Accounts Payable with invoices for payment. Its Inventory Control functions provide a daily breakdown of parts and labor into twenty user-defined categories. The program also tracks mechanics' sales and commissions weekly or monthly.

GAS-PRO also produces a Profit and Loss statement on request, based on user-defined expense and sales accounts. (List Price: \$1,995 to \$3,995, depending on customer requirements)

Requires: 128K, two disk drives.

PLOT!

A graphics program which allows user to plot and process data and/or curves described by mathematical functions. The program allows switching back and forth between linear, semi-log and double log scales, and to calculate and plot inverse, power, and linear functions of the data points. A user can calculate slopes, add data stored on disk to new data and find and plot the least square fit of the data points. PLOT! also allows labels to be placed anywhere on the graph, and graphs may be directly sent to a printer by a single keystroke. (List Price: \$29.95)

Requires: 64K, one disk drive, PC-DOS with BASICA, and a color/graphics adapter card.

ENERGRAPHICS

A two- and three-dimensional interactive color/B&W graphics program that was designed to perform business graphics and computer aided design functions for engineers and architects. The program can also perform flow charting for computer programmers, statistical plotting for scientific applications, and other drawing functions for the general user.

ENERGRAPHICS can construct 2-D line and pie charts and 3-D bar charts. A graphics editor can be used to output text and graphics in presentation or in document form. The technical user can use ENERGRAPHICS as a CAD system to construct 2-D or 3-D objects using data file inputs or advanced cursor drawing techniques. These objects can be saved and recalled for editing, rotating, zooming, hidden line removal, and text addition. Architects, electrical engineers, and computer programmers can also use the ENERGRAPHICS programs for developing a table of symbols or forms that can be recalled by a single keystroke and placed on the screen with any size variation, for use in architectural floor plan layouts or printed circuit diagramming. Three-dimensional surfaces and functions can also be plotted, viewed, and analyzed statistically. (List Price: \$250) Requires: 64K RAM, one disk drive, graphics adapter board. PCP, Pro/Pac, Inc.

PCP

A printer control program which allows users to print using five type sizes, seven line spacings, slashed or plain zeroes, elongated print, bold print and two sizes of proportional print by typing the number of the print option on the menu. Options may be combined, and instructions are given for embedding printer codes to software.

PCP is available for the IBM Dot Matrix Printer, the Epson MX80/100 Printers, and the Apple Dot Matrix Printer. (List Price: \$24.95) Requires: 64K, one disk drive, PC-DOS, specified printer. PRO/PAC, Inc. 14925 Memorial Dr. #105 Houston, TX 77079 (713) 496-1179

CIRCLE 596 ON READER SERVICE CARD

VISIBLE PIANO

A program that converts the PC into a playable musical instrument by means of a software package and a plastic keytop overlay which makes the keyboard look and feel like a standard piano keyboard. In operation, the user can both see and hear the notes as they are being played. This is accomplished by use of the keyboard, display screen, and built-in speaker. No additional hardware is needed.

This product can be used by both beginner and experienced musicians. Simply insert the delivery disk, type "BASIC PIANO," and the computer is transformed into a two-octave instrument with one octave on the upper two rows of keys and the other octave on the lower two rows. Visible Piano has a full 8-octave range which is selected by the eight function keys.

The manual includes an explanation to musical notation. A simplified songbook is included. Advanced features include a space bar which simulates the pedal on a piano, alteration keys, and an edit mode which allows anything on the page to be changed with full cursor control. The 200 note tune memory can be displayed one page at a time. The screen can be printed any time with the "Print" key to produce a printed score. (List Price: \$45)
Requires: 64K, one disk drive, PC-DOS, 80-column monitor. Synthaltics

CIRCLE 606 ON READER SERVICE CARD

SCHED-PLANNER

A menu-driven program that organizes individual employee schedules into master and submaster weekly schedules, composes and prints out a variety of schedule formats, and calculates the various labor costs for each schedule.

SCHED-PLANNER uses graphic date entry and can handle up to 1,600 weekly employee schedules on a single disk. The disk is organized into nine weekly schedules for a maximum of 200 employees each. Each employee may be scheduled for up to two shifts per day, 24 hours a day, seven days a week.

The user can specify up to 40 different job titles and work assignments.

SCHED-PLANNER incorporates these categories in cost analyses, permitting the scheduler to break down the cost of each schedule by day, employee, title, or assignment.

The program can also calculate and report the costs for a given schedule using each employee's hourly rate, applying break and overtime policies in the calculation. Reports show the daily cost of each employee, the cost of each job title category, the cost of each work assignment category, and the total costs. The employee's copy of the schedule can include regular and overtime pay for each shift.

SCHED-PLANNER features a Consolidated Schedule, a weekly master schedule that combines the schedules of all employees, groups them according to assignment, and displays them as time-line graphs. Each day is covered on a separate schedule. (List Price: \$750; documentation, \$30)

Requires: 64K, two 320K disk drives, printer.

Next Step

A programming utility that allows users to create a customized data collection/retrieval system with minimal use of database syntax or complex programming languages. User's programs are automatically written in Microsoft BASIC.

Next Step features its own database management system, and an "electronic programmer" to retrieve and process data to create any type of report. The user defines the data fields to be stored by creating up to 15 "key" fields by which the program is to search the database for data needed. When querying the database, any combination of key fields provide the search avenues. As the system is designed by the user at each step in the process, reports can be structured in any needed sequence and format.

The database features user-defined automatic editing criteria, customized screen and report formatting, and user-written menus. Reports can be printed including all or any part of records in the file, including records selected by key, partial key, or range of keys. (List Price: \$295)
Requires: 128K, two disk drives or hard disk, PC-DOS 1.1, or 2.0, 80 x 25 monitor, printer.

New On The Market

Weather Analyst

A weather data management program which stores and analyzes user's observations. The program contains an historical database of weather data going back to 1951, which is updated as user enters daily temperatures and precipitation amounts. Routines available through the program's menu can produce tables and graphs showing accumulated amounts, averages, departures from norm, extremes, and degree days.

Displays can be printed on any IBM/Epson printer equipped with Graftax. (List Price: \$89.95)
Requires: 128K, one disk drive, color/graphics card. Climate Assessment Technology, Inc.
11550 Fuquoo, #355
Houston, TX 77034
(713) 464-3603

CIRCLE 607 ON READER SERVICE CARD

File Clerk * Reporter

An application generator and file management program. Six types of programs can be created: file maintenance, report, label print, menu, file update (skeleton), and file conversion. **File Clerk * Reporter** also features binary tree indexing and dynamic record allocation. A tutorial is included to familiarize the user with each feature. (List Price: \$200)

Requires: 64K, one or more disk drives, MS-DOS, BASIC. Landrum Software
531 Greenleaf
Richardson, TX 75080

CIRCLE 666 ON READER SERVICE CARD

ACCESSORIES

Power Grip Joystick

An ergonomically-designed joystick, featuring a commercial size molded handgrip. The Power Grip Joystick also features two fire buttons, one at the base and one on the top of the hand grip, activated by a two-position slide switch. Unit includes a 5-foot cord.

(List Price: \$38.95)
Requires: Interface card, model 50-2070.

Wico Corp.

Dust-Off II and Stat-Off II, Falcon Safety Products.

Dust-Off II and Stat-Off II

A computer cleaning and maintenance kit containing one Dust-Off II canister of moisture-free propellant, a Mini-Vac, and Dual Extender accessories. The canister features a locking valve capable of continuous filtered blasts or short controlled bursts to blow dust away from surfaces. When attached to the canister, the Mini-Vac acts as a vacuum cleaner to pick up dust, lint and dirt particles, depositing them into a trap. The Dual Extender consists of a long, thin extension to reach into tight areas, and a two-foot hose.

A separate accessory, the Stat-Off II Adapter, fits over the canister's nozzle to produce an ionized dry blast. It can be used over keyboards to eliminate static prior to use. (List Price: Kit \$42.50)
Falcon Safety Products
Department V
1065 Bristol Rd.
Mountainside, NJ 07092
(201) 233-5000

CIRCLE 603 ON READER SERVICE CARD

Synergetix Work Station

A multi-function, mobile work station with a swing-out cabinet. The main section of the Work Station provides space for a PC's CPU, keyboard and display unit. The swing-out section accommodates a printer and supplies. For security, the Work Station can be closed and locked, and provides for internal wiring of all components.

The unit measures 34 1/4 inches high, 26 1/4 inches deep and 28 inches wide (35 1/4 inches when fully opened). It is mounted on casters, allowing it to be moved by one person, and is available in white, teak, and charcoal finishes.

(List Price: \$850)

Peachtree™ Connection

bridges the gap between
your Peachtree™ General Ledger
and VisiCalc®, Multiplan™,
1-2-3™, and Sofstar's BPT™

Imagine. At the touch of only a few keys, Peachtree Connection will put your accounting data to work in your spreadsheet program.

Discover how easy it is to organize up to five years of your actual accounting data on a single data diskette. Peachtree Connection interprets your Chart of Accounts and makes all the decisions about how to create powerful, preformatted worksheets, or "templates" for VisiCalc, Multiplan, 1-2-3, or Sofstar's Business Planning Tool (BPT)—In minutes instead of hours at the keyboard.

Once in template form, all of the features of the spreadsheet program are available for editing, printing reports and graphs, and what only a spreadsheet

program can do, "What if . . ." modeling.

Analyze your performance, project budgets, create graphs. You make more productive use of your time, and do a better, faster, smarter job.

So, if you want to free your accounting data to work in powerful new ways for your business, Sofstar's Peachtree Connection is the solution.

See for yourself. Visit your nearest computer store for a demonstration of Peachtree Connection today. Or contact us at: Sofstar, Inc., 13935 U.S. 1, Juno Beach, Florida 33408, (305) 627-5511.

CIRCLE 526 ON READER SERVICE CARD

Is your card index getting out of hand?

Do you need to keep file-cards describing people, products, books, records etc., and get at your file many different (unpredictable) ways?

Now you can, with CARDBOX, the new 'electronic card index' for the IBM-PC.

You draw your file card on the screen as you want to see it, and as you type in your records, CARDBOX automatically makes an index to every significant word. (You tell it what's significant).

So, if you've entered descriptions of, say, 1,000 legal cases, and you want to see all the cases that have the word 'accident' anywhere in the description, CARDBOX can instantaneously flash the relevant cards on the screen for you (or print them out).

If you want 'auto accident cases in 1980 with whiplash', CARDBOX can pick out cases with those 4 keywords too. Any retrieval is possible, up to 99 combined keywords.

- Very quick and easy to set up, powerful English-like retrieval commands
- Immediate response, since CARDBOX keeps its own index to all words, rather than searching slowly through the file like other data base management systems.
- Can be used for mailing labels, can write records to disk as input to other programs.
- Max. no. of cards: 65,000
- Max. 1400 characters per card (This ad has about 1100 characters)
- Easy-to-follow tutorial booklet & comprehensive reference manual
- Four 'Excellents' in Infoworld review (9/13/82)

FOR TRS-80 MODEL I OR III
IBM PERSONAL COMPUTER

The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1 and 3.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates. User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

mmsFORTH

A World of Difference

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3/4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3/4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

If you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

THE PC EXPERTS

PCX

SOFTWARE

READ-DOS \$50.00

At last there's a way to read files from PC DOS disks under CP/M 86** A/PC exclusive.

EDITDISK \$50.00

Now it's easy to search out, check out and change any sector on a Winchester or floppy. EDITDISK displays contents in hexadecimal or ASCII. You'll be so glad you have it.

LOADFAST* \$40.00

Now large EXE program files load at least 50% faster or your money back. Enhance all your programs with this guaranteed money saver. The time you save will be well worth it.

LINKUP \$30.00

Link your PC to any CP/M** system and use it in either terminal or computer mode. Save money, space and time. Upload and download files at speeds up to 9600 baud.

HARDWARE \$ CALL

Call PCX for the best prices on Persyst and Quadram memory boards. Also CAMEO Winchester disk drives. Order on separate sheet.

PC-DRAW, The Original High Resolution Drawing System for the IBM PC.

Optional Light Pen Supported

Reduce costly and time consuming preparation/revision of charts, diagrams and other Business Documentation. With PC-Draw's user definable symbol menus, extensive Graphic Functions, Multiple Text Fonts and Predefined Symbol Menus* you can Create, Maintain and Print virtually any type or complexity of drawing.

PC-Draw will help you achieve immediate productivity gains in the following application areas:

- Flowcharting
- Organizational Charts
- Forms Design
- Office Layouts
- Warnier/Orr Charts
- Architectural Design
- Mechanical Design
- Electrical Design
- Yourdon Structural Analysis/Design
- And other Drawing Applications

*Three predefined symbol menus come with PC-Draw. They are: Software Design, Electrical Design and Alternate Text.

*Introducing PC-Person, an uncomplicated character
who knows a thing or two about animation . . .*

IBM PC GRAPHICS PRIMER, PART III

*In Part II of the IBM PC Graphics Primer,
the authors explained how to use commands
in Advanced BASIC to plot points, draw lines, and create
geometric figures. In Part III, they explore the many applications of the Draw
command in BASIC Graphics Definition Language, including animation and
interactive input.*

CIRCLE 363 ON READER SERVICE CARD

The Draw Command

Only one BASIC graphics command will be studied in this chapter, namely, the Draw command. This command has only one parameter. However, you can use the Draw command to generate all sorts of shapes because it can hold a whole series of special one-letter draw commands from a special command language called Graphics Definition Language (GDL).

More precisely, the syntax for the Draw command is:

DRAW string

where string is a string expression, consisting of drawing commands in the IBM PC BASIC GDL.

Now let's begin our examination of this language. We will start with a summary list of its various components, and then we will discuss the rules for putting these components together to form command strings. GDL consists of the following components:

Three special symbols:

- , comma
- = equal sign
- ; end of command

Constants and variables:

- any numeric constant
- any numeric variable
- any string variable

One global move command:

M move

Eight local move commands:

- U move up
- D move down
- L move left
- R move right
- E move diagonally up and right
- F move diagonally down and right
- G move diagonally down and left
- H move diagonally up and left

Two modifier commands:

- B move but do not plot
- N move but do not change the current position

Three attribute setting commands:

- A set angle
- C set color
- S set scale

One command control command:

- X execute substring

Now let's begin a detailed discussion of the syntax rules for this language. The global move command M has two different modes: relative and absolute. These modes correspond, and indeed, perform in much the same way as the relative and absolute modes for the Point, Line, and Circle commands that we discussed last

WHILE AN interrupt subroutine is executing, the corresponding interrupt key is stopped automatically.

month. That is, in absolute mode, the new coordinates become the new current position and in relative mode, the new coordinates are added to the current position.

The syntax used in this chapter, however, is quite different from that used in the last. Instead of using the key word Step to indicate relative mode as we did in the last chapter, we will use a strategically placed plus (+) or minus (-) sign. To see how this works, look at the syntax for the M command in absolute mode. Absolute mode is indicated by the letter M followed by an unsigned integer, a comma, and another unsigned integer. The first unsigned integer is the new x coordinate and the second unsigned integer is the new y coordinate. For example,

Mx,y where x and y are unsigned integers

The effect of this command is to draw a line from the old current position to the new current position given by the x and y coordinates.

Relative mode is indicated by a plus or a minus sign between the M and the first number (x coordinate), thus making it a signed integer. The second number (y coordinate) must also be a signed integer, but it does not have to display a plus sign if it is positive. The form is:

Mx,y where x and y are signed integers and x has an explicit plus or minus sign.

In the first example, the absolute form is used to draw a large arrowhead on the screen. The graphics cursor begins at the center of the screen, moves straight up toward the top, down and to the right diagonally until it hits the center of the right side of the screen, down and to the left diagonally until it is in the center near the bottom, back up to the center of the screen, to the right until it reaches the center of the right side, and then to the left until it reaches the left side of the screen.

The following program can be used to draw a large arrow using GDL absolute move commands.

```
160 REM MOVES
170 REM
180 TS="MOVES"
190 GOSUB 5080:REM title
200 REM
210 REM Uses absolute global
    MOVES
220 REM
230 DRAW "m160,20"
240 DRAW "m319,
    100m160,179"
250 DRAW "m160,
    100m319,100m0,100"
260 REM
```

The command string can consist of a single move command, or several such commands can be joined together in the same string. It is also possible to put in semicolons to separate Move commands and to put spaces anywhere throughout the command string. Since the effects of several Draw commands are cumulative, you do not have to pack all your Move commands

GDL

commands can be written in either upper or lower case.

into one command string. Thus, you can avoid writing Draw command programs that are impossible to read because of their density.

Notice that the letter M is written in lowercase; GDL commands can be written

in either upper- or lowercase. If you type in your BASIC program in lowercase, most of it will be transformed automatically to uppercase. This is not true for comments and strings, particularly GDL command strings; they will stay in lowercase.

The next example illustrates relative moves. The program shown below can be used to draw an eight-sided star. Again, the graphics cursor starts in the center of the screen. It then begins to draw, zigzagging from one side of the star to the other as it draws its points.

```

270 REM STAR
280 REM
290 TS="STAR"
300 GOSUB 5000 :REM title &
  pause
310 REM

380 DRAW "m-30,+75"
390 DRAW "m+75,-30"
400 DRAW "m-75,-30"
410 DRAW "m+30,+75"
420 REM
  
```

THE GRAPHICS
cursor then begins to
draw, zigzagging from
one side of the star to
the other.

Now for the local moves: U, D, L, R, E, F, G, H. The four major directions are indicated by the initials U for Up, D for Down, L for Left, and R for Right. Diagonal directions are also possible, using the letters E, F, G, H. These letters take you in a clockwise direction around the diagonal positions on a clock face, starting at 1:30 for E, 4:30 for F, 7:30 for G, and 10:30 for H.

In the next example, these local moves are arranged in clockwise order, starting with U at 12 o'clock noon (or midnight). The graphics cursor begins at the center

and turns around as it moves away from the center, forming a spiral. The spiral is square-shaped, but other effects are possible. The lines 520, 540, 560, and 580 can be replaced by lines that move by the amount *i*, followed by the amounts 1, 3, 5, or 7, respectively.

```

Global and Local Moves

There are three possible forms for the syntax for these local Move commands: the letter itself; the letter followed by an unsigned integer constant; and the letter followed by an equal sign, the name of a variable, and a semicolon. In the third case, you can even have indexed variables as long as the index is not an expres-

sion.

A letter by itself (first case) indicates a move by one unit (which equals one horizontal pixel length) in the indicated direction, while a letter followed by either an unsigned integer constant (second case) or

THE N
causes the current
position to remain as it
was before executing the
command.

by an "equals" variable (third case) allows you to move as many units as you specify in that direction. In the sample program shown above, we have mixed the second and third cases (constants and variables). We have even included a case in which the constant is zero. In subsequent examples, you will see instances of the first case (letter by itself).

A Very Good Place to Start

The next two examples show how to use the B and N prefixes. These can be used with either the global or local Move commands we've discussed so far.

B stands for Begin. This command

Mimicking the CPU

We interrupt this program . . .

It is interesting to note that IBM BASIC mimics the interrupt facilities of its 8088 Central Processing Unit (CPU) (see Morgan and Waite, 8086/8088 16-bit Microprocessor Primer, Byte Books). For the 8088 CPU, there is a whole section of memory that holds the locations of all the interrupt service routines. The programmer must load these locations to "declare" these routines. There are also processor instructions that can enable and disable interrupts. In contrast to interrupts in BASIC, these processor instructions disable or enable almost all interrupts at once

(there are some that you cannot disable).

The interrupt service routines for the 8088 are in machine language, although they might be written in a higher level language such as PL/1. Each routine must end in a Return instruction, but in this case, the Return instruction is a slightly different kind of Return than the one used for ordinary subroutines for this processor. The difference is that more information is "saved" (and must eventually be restored upon return) when interrupt subroutines are executed.—M.W., C.L.M.

SCRIPT and GML
on your PC!

ReadiWriter™

\$95⁰⁰ After June 30 \$125
30 Day Money
Back Guarantee

Mainframe power and compatibility and Micro usability in one package ReadiWriter (say "Ready Writer") is a superset of IBM's Generalized Markup Language on mainframes with major extensions plus support for over 50 Script commands.

The price would have been \$495 two years ago; the overwhelming success of the IBM PC makes such prices obsolete even for major software.

Proportional spacing and justification, superscripts and subscripts, bold and underscore supported for Diablo, NEC, and many others. Supports most printers, new printer support easily added with human readable device files.

ReadiWriter automatically: builds tables of contents; does numbering of chapters, lists, page headings and footings, numbers and places footnotes; indexing commands aid building multi-level indexes.

Three manuals: Tutorial, Users Guide and Advanced Users Manual total over 400 pages. All manuals indexed.

ReadiWriter formats with imbedded commands; files are created with REdit, which comes with ReadiWriter, or with any other editor you wish.

All settings are under your control, left and right margins, headings and footing margins, paragraph indent, etc. Macros allow creation of new commands or customization of many provided commands. Requires 128k IBM PC with 2 drives.

causes the next command to be executed as a move without Draw, allowing you to place the unseen graphic cursor anywhere on the screen without scratching your beautiful drawing. Since the B command modifies only one Move command, you need to put it in front of each "unseen" move. The sample program below indicates how to use the B command to "pick up the video pen" to prevent the figures you are drawing from merging together. The program draws a set of small arrows shooting out over an arc.

```
610 REM ARROWS
620 REM
630 TS="ARROWS"
640 GOSUB 5000 ;REM pause &
    title
650 REM
660 REM Uses B prefix
670 REM
680 DRAW "bm10,100;"
690 REM
700 FOR I=1 TO 24
710 DRAW "bu10bd=i;br10"
720 DRAW "r20d4e4b4d4120"
730 NEXT I
740 REM
```

Notice the initial global move in line 680. This puts the graphics cursor into the desired position to start the drawing. The FOR loop, lines 700-730, draws the entire picture. The command string "r20d4e4b4d4120" is used to draw an arrow. The cursor is in the same place as it was when we started the arrow. It is generally a good idea to draw each subfigure so that the

the screen without worrying how the current position will be affected by the current subfigure.

In the current drawing, you will see that the arrows follow an arch. This is con-

THE X
command acts like a
subroutine call in that it
causes any command
string that you name to
be executed
immediately.

trolled by line 710 in which we move up by a constant amount, down by a variable amount, then over by a constant amount. This line represents the differences in position between the tails of the arrows. The differences are given by the linear formula:

i - 10

If the differences are linear, then the absolute positions are quadratic, and we will get a parabola that is the correct shape for a trajectory. This method is used in computer graphics to allow curves to be generated by fast linear processes. Generating curves in this way is called the method of forward difference.

The next example shows how to use the N prefix. This command causes the current position to remain as it was before executing the command. Since N affects only the very next Move command, it can not be used to return the current position to the starting point for a whole subfigure.

In this example, we have chosen to display a simple star or asterisk. The current position starts out at the center of the asterisk and remains there after drawing in each of the eight possible directions. We have chosen to draw the four major directions first (line 820), and then the diagonals (line 830), but you can name the lines in any order since the "pen" (current position) returns to the center each time.

750 REM ASTERISK

current position returns to its starting point. This is helpful when you want to use these subfigures in a complex drawing because you can work at a higher level, placing subfigures at various positions on

```

Setting Colors and Drawing Figures

Our next example is somewhat longer than the previous examples in both the number of program lines and in the execution time, but it illustrates a number of different concepts. Much of the listing consists of comments. If you wish, you can skip some of these when you type it in.

The C command stands for Color, and it sets the color for all subsequent Move commands until the next C command. Its syntax is similar to that of the local Move commands, except that you cannot let the letter C stand alone without following it with a semicolon. When a semicolon follows C, a value of zero is assumed. Normally, C can be followed by an unsigned integer constant (case two) or by an equals sign, a variable name, and a semicolon.

The rules for associating numbers with colors are the same as in the previous chapter. In the medium resolution mode, you can use the numbers 0, 1, 2, 3 to spec-

subsequent Move commands until the next A command. Only four angles are allowed: 0, 90, 180, and 270 degrees. When you first turn on your computer and until you invoke the first A command, a value of 0 is used. The syntax for this command is the same as for the Color command. You must use the numbers 0, 1, 2, or 3, which correspond directly to the possible angles. In other words, the angle of rotation is 90 degrees times the number you specify in the A command. When objects are rotated by 90 or 270 degrees, they are drawn with the aspect ratio of 4/3. This means that rotated objects are drawn in such a way as to prevent them from looking distorted if you happen to be using an ideal TV monitor.

The last example in our series uses the X command. The X command acts like a subroutine call in that it causes any command string that you name to be executed immediately. In the command syntax, the letter X is followed by the name of a string variable followed by a semicolon. The semicolon must be present so that BASIC knows when the name of the string has ended. It is possible to have indexed string variables as long as the index is not an expression.

In the following example, an octagon is defined and stored in the string variable called FIG\$. The FOR loop from lines 1660 to 1680 is in charge of drawing the various copies of the figure. This loop has only one Draw command through which the scale factor is set and the string FIG\$ is executed. The X command is not really necessary since we could concatenate the strings s=A and FIG\$ instead.

```

PROBLEMS FOR COMPUTER SOLUTION

Sharpen your students' minds and give them practical experience in using the computer. PROBLEMS FOR COMPUTER SOLUTION offers 90 brain teasers involving algebra, geometry, trigonometry, number theory, probability, statistics and science. Some typical examples:

- Can you find a five-digit number which when multiplied by four has its digits reversed?
- Write a program to find "Hardy's number" (the smallest integer that can be written as the sum of two cubes in two different ways).
- Program the computer to test any phrase to see if it is a palindrome (reads the same way backwards as forwards).

The student edition contains all 90 problems, seven appendices and a bibliography. The teacher's edition includes the same, plus the solutions with listings in BASIC, sample runs, and in-depth analyses explaining the algorithms and theory involved.

DIRECTORY

The Complete Information Resource

You know that the right software and hardware can make your IBM PC and XT your most effective data processing and management tool. But thousands of IBM PC and XT compatible products are already on the market, and new ones are introduced almost every day. How do you find the right ones for your needs?

PC: The Product Directory—exactly the resource you need to get the answers you want.

The Authoritative Reference

Organized for quick, convenient use
PC: The Product Directory organizes what could be a bewildering array of products and services into

- Easy to follow categories that guide you quickly to the software, service or support items you're interested in
- Cross-referenced so you don't miss a thing

PC: The Product Directory

Answers your needs with the latest, most accurate information about virtually every product now on the market.

- Precise, reliable data
- Objective
- Comprehensive

Demand for **PC: The Product Directory** is great so be sure to reserve your copy now at the pre-publication price and save postage and handling charges. Simply fill in the coupon below or send \$7.95 to **PC: The Product Directory**, P.O. Box 555, Morris Plains, NJ 07950. Your copy will be shipped from the first-off-the-press copies on approximately August 25.

Next to IBM's documentation, your most important IBM PC or XT reference

IBM's documentation tells you what you need to know to make the machine work...but only **PC: The Product Directory** tells you about all the compatible products, support, supplies and documentation you need to do the work.

Mail to:

PC: The Product Directory

P.O. Box 555 Morris Plains, N.J. 07950

Please reserve _____ copy(ies) of **PC: The Product Directory** to be shipped on approximately August 25, 1983. I enclose \$7.95* plus \$1.00 for shipping and handling for each copy. Outside U.S.A. price is \$10.00, send U.S. funds only.

*Residents of CA, CO, CT, DC, FL, IL, IN, MI, MO, NJ, NY State and VT add applicable sales tax.

PCTM MAGAZINE FREE INFORMATION

Learning more about a product that's advertised or mentioned in an article in this month's issue is as simple as 1-2-3. And absolutely free.

1

Print or type your name and address on the attached card. Use only one card per person.

2

Circle the numbers on the card that correspond to the numbers at the bottom of the advertisements or articles for which you want more information. (Key numbers for advertised products also appear in the Advertisers' Index.)

3

Simply mail the card, and the literature will be mailed to you free of charge by the manufacturer.

This address is for our "Free Information Service" only. All other inquiries are to be directed to PC Magazine, the Independent Guide to Personal Computers, One Park Avenue, New York, N.Y. 10016

Turtle Graphics

The Draw command and its associated command language provide capabilities that are similar to but not the same as turtle graphics, part of the computer language called LOGO. LOGO is an exciting new language originally designed to help children understand computers and geometry. It was inspired by Jean Piaget who is renowned for his theories of human development.

In LOGO, you move a graphics cursor called a turtle around the screen. You can move this graphics cursor backward and forward and make it turn in the same way as in IBM GDL. Turtles can also be used to make spirals, just as in IBM.

There are, however, fundamental differences between the IBM GDL and turtle graphics. For example, the commands used to move the turtle are expressed in words, which are an integral part of the LOGO language as opposed to IBM GDL where the Move commands are given by single letters hidden in strings. There are also other important differences. For example, a turtle always has a heading, which is the direction it faces. You can instruct the turtle to go forward or backward by a specified number of steps; but you cannot tell it to go directly to the left or right a certain number of steps. Instead, you must first instruct it to change its heading by a certain number of degrees and then tell it to move forward in that direction. With IBM GDL, you can only go in eight different directions and are limited to turns by multiples of 90 degrees. Turtles can turn in any direction. In view of these limitations, maybe we ought to call the graphics cursor in the IBM GDL, a toad rather than a turtle.

Animation and the Cursor Keys

The next applications examples illustrates two extremely important areas of computer graphics: animation and interactive input. As a simple demonstration of how both of these concepts can be handled in the IBM PC, we present a program that manipulates a PacMan-like figure called PC-Person. The cursor keys control the motion of the figure. Hitting the right

cursor key moves PC-Person to the right. If you hit the left cursor key once, the motion will stop, and if you hit it again, PC-Person will move to the left. Once the

IN ANIMATION,
it is normal to repeat
frames in a given
animation sequence or
even to repeat cycles
many times.

figure moves to the left, hitting the left cursor key again will not have any effect. The same thing happens with any pair of "opposite" keys (up-down or left-right).

When PC-Person hits the edge of the screen, he "wraps" around to the opposite edge of the screen. You can, however, modify the program to make PC-Person bounce off the walls instead. (Hint: You will have to change lines 700-750.)

```

```

When you run this program, the PC-Person appears to be opening and closing his mouth constantly. Notice that the eye also appears to move forward and backward. What is actually happening is a fairly rapid sequence display of views of the same figure in different positions. This sequence of views is called the animation sequence. In the sample program, we define three different positions (views) for our PC-Person. In position 1, the mouth is open fully; in position 2, it is partially closed; and position 3, the mouth is completely closed. The animation sequence consists of a cycle in which positions 1, 2,

3, and 2 are repeated over and over again. Position 2 appears twice each cycle. In animation, it is normal and economical to repeat frames in a given animation sequence or even to repeat cycles many times.

Each view or position of the man consists of several basic pieces. The main outline of the head is the same in all views, as is the basic shape of the eye. The mouth is the only part that is shaped differently. The parts of the face are put together and stored in a string array called MAN\$.

MAN\$(0) has position 1 (mouth open)
 MAN\$(1) has position 2 (mouth partially closed)
 MAN\$(2) has position 3 (mouth closed)
 MAN\$(3) has position 2 (mouth partially closed)

This array corresponds exactly to one cycle of the animation sequence.

The construction of the figure is completed in the first part of the program. The

animation sequence is then implemented in the middle of the program in a main loop (lines 650-800) called the animation loop. This is an endless loop that will continue until you hit Break.

In the animation loop, you begin by entering a string called MOV\$. This indicates the new location of the man (line 770). A single Draw command (line 800) then erases the figure by turning the color to 0 and drawing it in both the old position (using index K-1) and the old location; moves to the new location using the MOV\$ string; and draws the man in the new position using index K. Following the Draw command, the index is incremented, then adjusted back to zero if it gets too large. The result is that the figure is rapidly erased and redrawn as the index cycles through the values 0, 1, 2, 3.

It is important to redraw the figure as soon as possible to cut down on flicker. Even so, you will still see some flicker when you run this program because the Draw command is not quite fast enough for perfect animation.

TESTCAPTURE™/PC

"The Time Saver" for the Clinical Laboratory

Software
for Professionals
by Professionals

TESTCAPTURE/PC is a trademark of Persoft, Inc.
 IBM-PC is a trademark of International Business Machines, Inc.

Finally, software that handles the hard part of Analyzer data: getting it all organized quickly and inexpensively. Now, simply connect an IBM-PC™ to your Clinical Analyzer and TESTCAPTURE/PC is ready to go to work for you. Printout function provides real-time quality control for test results, and all data is stored on diskette for future use.

Available for use with Beckman, Technicon and Coulter Analyzers.

We accept company purchase orders. Mastercard and VISA.

CIRCLE 357 ON READER SERVICE CARD

Using the Cursor Keys

Now let's turn our attention to the subject of interactive input. The cursor keys provide the IBM PC with built-in interactive input facilities. These keys allow you to move various parts of a picture around, perhaps for an animated game or for the development of a design (room design or design of an electronic circuit).

At first glance, the sample program looks as if there is no input possible during the main loop. Actually, there is no Input statement and no INKEYS statement, yet when you press any one of the cursor keys, PC-Person starts to move in the indicated direction. How do the cursor keys work? The secret is interrupts. When you press one of the cursor keys while this program is running, the program is actually interrupted to process that keystroke.

IBM BASIC is designed to handle interrupts from as many as 14 different keys. These include the function keys (ten keys on the left side of your keyboard) and the cursor keys (the four keys marked with arrows on the right side of your keyboard).

The function keys are assigned numbers from 1 to 10 and the cursor keys are assigned numbers from 11 to 14.

Normally, these keys will not interrupt

IBM BASIC is designed to handle interrupts from as many as 14 different keys.

your program, but you must do three things before this will happen successfully: you must enable each key that you want to use; you must declare the location (line number) of an interrupt service routine for each key; and you must write an interrupt service routine for each key.

Normally, interrupts are disabled, meaning that these special keys behave like any other keys. While your program is

running, you can use the INPUT or INKEYS statements to wait for combinations of (or single) keystrokes that involve these or any other keys.

Interrupts are enabled by the Key(n) On command. An interrupt from key number n can only occur after the Key(n) On has been executed. In our program, this command occurs in lines 600-630 with one statement for each key that we want to enable. The syntax for this command is:

KEY(n) ON (enable interrupts from key number n)

You can use the Key(o) Off to disable any further interrupts from the key and you can use the Key(o) Stop to stop processing temporarily, but you must remember the interrupts since they will be processed upon execution of a subsequent Key(o) On for that key. The syntax for these two commands is:

KEY(n) OFF (disable interrupts from key number n)

KEY(n) STOP (stop interrupts from key number n)

Interrupt service subroutines are declared with the On Key command (not to be confused with the Key(n) On or the Key On command). This command allows you to place your interrupt service routine wherever you want in your BASIC program. The syntax is:

ON KEY(n) GOSUB line

where n is the number of the key and line is the line number of the interrupt service routine you have written for that key.

Now let's look at the interrupt service routines themselves. The purpose of these routines is to take care of the keystroke quickly with the least amount of disruption to the main program. When a program is running, BASIC checks for interrupts before executing each BASIC statement. If interrupts are declared (On Key statement), enabled (Key(o) On statement), but not stopped, then whenever that key is hit, the declared interrupt service routine is called automatically. It is interesting to note that while an interrupt subroutine is executing, the corresponding interrupt key is stopped automatically. This is equivalent to putting the Key(o) Stop command at the beginning of the subroutine.

An interrupt service routine in IBM PC

The computer-age storybook for kids!

Katie and the Computer

By Fred D'Ignazio

Illustrated by Stan Gilliam

This wonderful storybook teaches young children how a microcomputer works. Katie ends up inside her dad's new micro... and has an adventure with Colonel Byte and the other characters who make a computer work. Her journey follows the path of a computer command; her experiences are technically accurate yet easily understandable, right down to her encounters with a program bug. Additional material is included to help you relate the story to actual working parts of the computer. With truly exceptional color illustrations, this is an excellent first computer book for youngsters.

Hardcover, 11" x 8 1/2", illustrated.

MAJOR LEAGUE BASEBALL ON YOUR PERSONAL COMPUTER

Now you can simulate Major League Baseball games on your IBM P.C.

Home Computer Major League Baseball allows you to play Major League Baseball games between any of the teams from the past season (1982), or any of 16 famous Old Timer's Teams.

All batters and pitchers are rated according to the major statistical categories, so their "performance" in the computer games will be similar to the performance for the appropriate season.

Like any good simulated baseball game, Home Computer Major League Baseball contains all of the important baseball strategy options—stolen base, sacrifice bunt, defensive changes, hit and run, infield in, etc. However, Home Computer Major League Baseball contains much, much more—for instance:

- Ability to play against the computer
- Ability to play multiple (e.g. 20, 50 or more) games with the same lineups, with only the final score being printed. These games take less than two minutes each. You can use this option to test various lineup combinations.
- Ability to make trades, create new teams, hold a "free agent draft"
- In addition to printing a box score, the program will update league standings and statistics; you can access the statistics, and print out "League Leaders" for the various statistical categories.

This package is more than just another computer game. It is a complete set of programs which allow you to simulate Major League Baseball in your own home/office. Games, statistics, trades, and more.

—All programs are user-friendly and prompt-driven; you can learn the instructions in a matter of minutes. Games will take 15-35 minutes.

—Music: color supported, not required.

Here is a box score of a Home Computer Major League Baseball Game.

[illegible]

Technical specs: IBM P.C., 64K (160K version now available) minimum, at least one 320K disk drive DOS, BASIC required. Printer supported, not required.

IBM PC is a trademark of IBM Corporation

BASIC looks very much like any other type of BASIC subroutine. For example, it must end with a **RETURN** statement, which returns control to the main program to the statement following the one where it left off.

The last part of our PC-Person program contains four interrupt subroutines, one for each cursor key. These subroutines are very short—merely updating variables (DELX or DELY). There are certain constants in these routines that you may want to experiment with in order to "tune" the program.

When you run the program, the PC-Person figures are constructed (no interrupts are yet enabled at this point); interrupts are declared (lines 550-580) and enabled (lines 600-630); and the main animation loop is entered. Once you enter the loop, the loop is interrupted whenever you press a cursor key and the appropriate interrupt subroutine is executed, updating the DELX or DELY variable. Each of

WHEN A program is running, BASIC checks for interrupts before executing each BASIC statement.

these variables is used just once in the main loop, and the effect of the key does not become apparent until that point. It is possible for several keystrokes from this key to occur during one complete pass through the animation loop. Since the service subroutines increment or decrement their variables, the effects of these strokes are accumulated, but are displayed only once per pass through the loop.

The DELX and DELY actually control the change in position for each complete pass through the loop; that is, they control the velocity of the PC-Person. Every time you hit a key, you "change the change" in position, accelerating or decelerating the figure. We have restricted the values of DELX and DELY so that you can control PC-Person more easily. /PC

Coming Up

Graphics Cameras

The results of a thorough test of seven cameras that can preserve your PC's screens on film, slides, or Polaroid prints.

Bottom Line Strategist

A powerful forecasting system from Ashton-Tate that analyzes information on business operations, sales, and advertising to make easy-to-interpret projections of an enterprise's profitability.

The Computer Virgin Returns

Don Kennedy opens the box in his living room and finds a PC and its manuals. Can he master them in time to finish writing his mystery novel on a word processor?

Local Area Networks

A close look at several systems of hardware and software that can link an office's PCs into a network where the stations work together and share the use of expensive peripherals.

Special Training Section

Learn more about operating your PC, programming in a new language, and making better use of applications programs such as spreadsheets, word processors, and database managers. Also, an extensive guide to classes, workshops, books, videotapes, and even instructional program disks that can help sharpen your software skills and overcome computer confusion.

And a look behind the scenes at Boca Raton to see how Big Blue trains its development, manufacturing, and sales staff.

**NEED HELP BUYING
A COMPUTER
OR PERIPHERAL?**

GET THE GUIDE!

BUYER'S GUIDE TO PERSONAL COMPUTERS, PERIPHERALS AND ELECTRONIC GAMES

Features Include:

- Which computer is for you
- Evaluations of personal computers
- Tips on buying peripherals
- Peripheral product reviews
- Music synthesizers
- Comprehensive evaluation of joysticks, paddles and game port extenders
- Video game systems and software
- Roundup of electronic toys and games
- Electronic and computerized learning aids
- Video products for computer users
- Selected microprocessor-based consumer electronics products

COMPREHENSIVE GUIDE TODAY!**

HERE'S HOW TO ORDER

Send your name, address and \$5.00 (\$3.95* plus \$1.05 postage and handling) to:

Buyer's Guide to Personal Computers

P.O. Box 555, Morris Plains, N.J. 07950

Please make check payable to:

Buyer's Guide to Personal Computers

*NJ residents add 5% sales tax.
Price outside U.S.A. \$6.00.

History will record as a profound irony
that the most powerful word processing package
ever created for the IBM® Personal Computer
wasn't created by IBM.

TESTED TWICE. GUARANTEED FOREVER.

Introducing Wordsworth™ flexible disks—the most reliable disks ever tested.

Twice.

First, every single Wordsworth disk gets hit with a barrage of rigid quality-control tests to make sure we meet or beat every technical spec demanded by the people at ANSI and ECMA.

But, since very few things in this world are perfect (including tests), we test every single disk again, for exactly the same criteria. And only if a disk is second-time certified 100% error-free is it pronounced worthy of the name Wordsworth.

Which is about as synonymous

as possible with "perfect."

Which, in turn, means you'll have an easy time answering questions like: Is every inch of every track certifiably 100% error-free? Will it play back exactly what you fed in, without missing a single bit? Every time? From now until death and taxes are eliminated?

And then we have a very simple rule: If the disk doesn't check out, it gets chucked out.

Why do we go to all this bother? Because, very simply, Wordsworth is the world's newest major brand, created and tested with the world's newest and best technology. It's a premium product that

will become the world's most widely used disk for absolutely critical information applications.

Our disks come in 5¼" and 8" sizes, in virtually every configuration, for compatibility with virtually every microcomputer on the market. Unlike any other disks in the industry, every one is tested twice, so, unlike anyone else in the industry, we can guarantee them not for 30 days or 90 days or even 5 years ... but forever.

And forever, as you may have heard, is a long, long time.

WORDSWORTH

**LEADING
EDGE®**

Distributed exclusively by Leading Edge Products, Information Systems and Supplies Division, 55 Providence Highway, Norwood, MA 02062. Dealers: Call toll-free 1-800-343-8413; or in Massachusetts, call collect (617) 769-8150.

CIRCLE 292 ON READER SERVICE CARD

TECMAR'S GRAPHICS MASTER.™

It adds graphics to your IBM Monochrome Display, or 16 high-resolution colors to your color monitor!

Now your IBM-PC can run monochrome or color displays with remarkably enhanced graphics... and all from this one multi-function board — no other video board needed!

With your IBM Monochrome Display, the Graphics Master™ board gives you truly high resolution graphics, allowing 640 horizontal x 350 vertical pixel display.

With other monochrome display screens you can obtain even higher resolutions — up to 640 H x 480 V, with full-page 80-character x 60-line text display.

With a color monitor, it extends your color graphics to 640 horizontal x 400 vertical 16-color interlaced display.

Graphics Master™ accepts external sync, so you can add labelling to images. You can overlay characters or other computer-generated images on a video picture using the PC-Mate™ Video Cassette Recorder Controller.

This remarkable new board fully supports all IBM advanced BAS/C color graphics functions.

For further information about our Graphics Master™ and the largest line of options available anywhere for the IBM Personal

Computer, call or write for the latest catalog of PC-Mate™ peripherals from Tecmar.
